

One Planet, One Nation, One Race

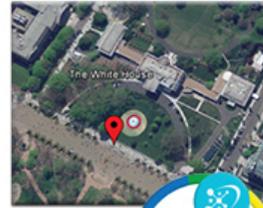

14th of August, 2016

White House, Washington, DC

PLASMA ENERGY IN EXCHANGE FOR WORLD PEACE!

www.KesheFoundation.org

We are delivering the first plasma energy unit to the President of the United States. It is so simple that even the President can make a plasma generator in the Oval Office, for free!

You can follow on Livestream and Youtube!

Livestream at:

<http://livestream.com/KFSSI/events/5758705>

Knowledge Seekers Workshops Zoom Meetings are held at:

Keshe (K): There are people listening from every corner of this planet. No knowledge has ever been dispersed so beautifully and so balanced across this planet ever, maybe even the universe. You have the full potential of achieving everything in the universe. There is no need and there is no reason for man not to achieve. So, wherever you are the way I taught you to make the coils with the ____ inside, you have continuous equal gravitational magnetic fields and if you put CO2 on it and Zinc on it you have connected the emotion of man to it in a stable condition. You will find out you will become a very peaceful man. Here in this part of the galaxies and the universe and creating gravitational and magnetical fields we have used the matter state gravitational magnetical field strength dominate and dictate the

shape of the plasma. the nano technology and the nano materials you have developed in different ways by electric balance, fire or whatever has that advantage that the matter, the nano and the plasma is all the same and the connection is very solid and it is very strong. The power of the plasma technology the way we have brought is beyond the imagination of the man. Now we can create and control the plasma which is the mother of creation of the universe. You are given the seed of the essence of the creation. The foundation does not belong to no one and is not made of one anymore. You are developing and you are structuring and from today we have at least do the same; we will develop the technology in different names, in different colors and in different nationalities which do not exist. It is beautiful when we see the Christians, the Muslims, the Jews and every other belief are working together to build up systems. We have already become one faith, one nation and one planet. You have to remember one thing: dates are irrelevant if today is the last of the Christian calendar or the beginning of another. One date is connected to another and we don't stop. We are working around the clock. The Keshe Foundation (KF) team is working irrespective of time, position, religion or country. And we see what we set out for.

K: good morning, good day wherever and whenever you listen to these teachings. As is usually we start with the program of what we can do and what can be done and what we see in the changes of the technology. As I explained before we have reached a pinnacle point of all the teachings of the matter state and we have moved into the plasma transmission and the field exertion. There are a number of things which now that we are this point that we have to understand and discuss. One of the points is that a lot of you have made a lot of reactors and you see a lot of different effects but in so many ways you cannot see the real step into the step of uplift and motion and some of you have reached a point that you reach the point of the change, but it does not follow through. I have been explaining this to the Knowledge Seekers and the people that work in the background that there is a huge gap in the process of the understanding and the application. One of these gaps has been that a lot of you go through the production of the coils or cores and a lot of you go into the phase of running motors and trying to apply rotation to motors and electric connections and electrical connections. In that point and condition there is a small problem and that problem is that none of you go through the phase or the condition of actually understanding where and how things connect. In so many ways we need to understand this difference in the process that we can bring in the final push. In the structure of your

work and understanding the process we need to understand and connect things together and everything has to be on the same level and of the same structure.

K: can you see my desktop and the white board? Let me explain to where the problem is and some of you will and some of you won't be able to understand it. I explained this to the knowledge seekers in the background. You all have a motor and an attachment and you assemble your cores (11.42 minutes) on it. Most of the cores are connection to a line or a power supply. You create a plasmatic condition and this plasmatic condition itself has inherent fault in it. First of all you create a field which interacts with a motor winding. (12.14 minutes). But, the biggest flaw is that through your line of connection you connect to earth and you connect to the ground. So, at the same time you are receiving electron vibration and not plasmatic. So, your system up to now has always had a flaw in it and a massive leakage. (12.32 minutes). In a way you have plugged yourself into the ground. Some of you who have seen better results or different conditions like Douglas where he mounts the ball on a free, handheld on a system that has no connections to a battery charger and still the interaction is internal plus him, which is in the gans state. (12.59 minutes)

K: We have got to the point that we have to change this. You have to change this structure of earth connection to the ground (13.15 minutes) to the point where the system control is all of the plasma condition. (13.23 minutes). Then you will see the system respond very fast and you will achieve what you need. Here, you are dealing with electrical vibration (the system with a motor plugged into electrical outlet). And here you dealing with plasma that goes out, but everything is plasmatic (the second hand held system) so this pushes us to the next step of development and this is literally what we need to understand and progress into. Part of this process is new energy systems that are totally plasmatic and in a way they are Magrav systems (14.06 minutes). This is what has been lacking in our progress. At this moment of time this needs to be an energy unit and a generator which creates only plasmatic fields. (14.24 minutes). And, it operates under Magrav conditions itself. Then, the energy supplied by the system, still being a Magrav system and in interacting with the Magrav system creates a position of total inclusive shell and this is what we are looking for.

K: In that process we have explained to you that KF has put in position the production of what we call plasma generators that we are offering at the

moment through the KF. As you have seen in the last presentation by Douglas we show how this is done. In the past week we made a video of this new generator which allows man now to go to the next phase. This is for not only generation of energy but support of energy for lift and motion in a plasmatic condition. It is the first time we can achieve this and it is the first time that everything is becoming plasmatic gravitational field. A few days ago, but the request and negotiation we do in the background with governments we made a video which is a 4 minute video and it brings a lot of things home. We have called this *the Last Supper Energy* which means it is the final stage of energy production. This video is very important and we play this with you know so you can see and understand and if you understand what you see what is on the table and then we bring Douglas in and go to the next stage. What you see today will change the course of energy production world wide. We have requests from all leaders' offices and they are only—people from China, from Russia, and Obama and government officials are all online on Zoom and Live stream.

K: we have asked them to be present because we are going to show something that will change the course and you will understand. Sometime during the course of this morning we will show this change. And then the world of energy will change; the world of technology will change and this change that you will see started in this soft way with this home video. This has been sent to world leaders in the past few days and it has a huge consequence and it has huge application and implication. Do you have the video with you to play? Do you need me to talk over it?

K: is the set up I requested finished? Is it ready?

D: yes, I have every load I could possibly hook up.

K: is that piece out of it.

R: there are some words in the video.....

K: leave the words out; I can explain it; I know the video inside out. Let me explain what this is. This is directed to the government officials of the United States and we are speaking directly to the officials of the White House and we ask the secretary of State, Mr. Kerry and the office of the president of the United States and we are speaking directly to President Xi in his office in China. Your Excellencies the video is for you to see and you will understand in negotiation terms. This video is made to bring the change and our team in the background is fully aware of the next step. Can you please play the video and then we go to the next step.

Video – The Keshe foundation Spaceship Institute Product Innovation and Development Team presents: Magravs Plasma Generator Test (19.47 minutes) Magrav Plasma Generator Test date: Early August of 2016. What you are about to see is a four minute test run of a prototype of the Magravs Plasma Power Generator (the unit under the yellow box) created by the Product Innovation and Development Team of the Keshe Foundation Spaceship Institute. This unit is powering all shown devices on the table at the same time and there are no power cords running to the table from the wall. The starting load from the appliances shown draws 5700 watts and the continuous running load is 4655 watts. The noise you hear is from a 1500 watt hair dryer running on high. The system is otherwise, silent

K: This technology that you see in the background speaks for itself. We have managed to tap into the universe. You are about to see a 4 minute video of the test run of the plasma generator. The unit is under the yellow box. This unit was the magic that a lot of you have been waiting to see. This unit, this circuit is set up to use the equipment on it. Then you will understand what changes are to come. You will be shocked when we go live and we bring everything in. You can see there is a high dryer and heater running; the noise in the background is the hair dryer. You can see a pump running, you can see lights, you see a yellow box in the middle and you see the Magrav system and some capacitors and a refrigerator in operation. Everything is in operational mode and all together it was 5.7 KW and dropping to 4.8 KW. (21.15 minutes). There is no (connection) and you can see what we call the last energy system as the Las Supper of Chris, bless his name.

K: Everything you need is here up to 5 KW. You can use these at home instantaneously on the table. There is something very interesting with this; all of this is done with no connection. It was set to be a revolution if you can find parity. There is no energy input and what is interesting is that everything in that yellow box has been what we have been waiting for. You can see the usage below:

Space Heater:	1500 watts
Grilled Cheese Maker	800 watts
Microwave Oven	700 watts
Hair Dryer	1500 watts
Refrigerator	700/85 watts
Refrigerator compressor	500/75 watts
Total watts	Start cycle = 5,700 watts

Run cycle = 4,655 watts

(Light bulbs were not calculated in totals)

This is constant use and this system can be used constantly and for decades and it has no energy source. It has no energy source; the energy source comes from the Magrav system which is inside and you can see there are no connections. This is the first time ever humanity has managed to achieve energy without fuel. The fuel is in the coil. The fuel is the way we set up the coils. The beauty of this is that in the next frames when we go back on live you will see something very special. Here all the attention is on the yellow box. They want to know if there is no battery if there is anything under it. You see there is nothing: 5.7 KW --all your needs in the house are on the table. The average house uses 2.8 to 3.6 KW of power. This covers a lot. Everything is in the running mode and there are no connections. This is the secret of the change of technology. We will explain to you what we have done and then you will understand. Douglas goes repeatedly around showing there is no battery power, no connection to anywhere and it is what I call the last energy system. If you put your camera anywhere in the world with such a small system you have broken parity. You are 5.7 KW. We can push this to 200 to 300 KW. We know how. The next step is to create a 3 KW pocket sized generator.

K: now you see he has switched off the blower. The system still runs.

Douglas (D): Start Cycle - 5.7 Kw; Run cycle – 4.65 Kw for 4 minutes continuously.

K: This is what we asked Douglas to do—a 4 minute video. If you can produce 1 minute at 4.7 KW you have broken all the rules of physics and this shows new development and new energy source.

What we are going to show you now will bring closure to all discussions.

Douglas can we go on camera with you?

D: yes, sir, Mr. K.

K: let me explain to you what we have done and what you see. You have seen the system that is literally running on its on with what is to be a Magrav unit and battery capacitors. We are trying to show something very special. Is Douglas back? Have you removed the yellow box?

D: no, I told you this was my surprise. 26.08 minutes. Yes, it's gone, but the box is there.

K: can you show us what the energy consumption is please?

D: we have a dorm refrigerator, a 1500 watt heater/ran forced set on the highest setting, 1500 watt hair dryer, 800 watt cheese sandwich maker, there are coils here in the corresponding order—CH3, CO2, CO2 and the plasma cores in the middle (27.22 minutes) and my sets of 4 sets of capacitors that are run parallel with the system.

K: can you show us under the table if there are any connections please?

D: Yes and here are 3 fluorescent light bulbs and the microwave and another standard refrigerator compressor that starts out with 700 watts. And of course the microwave, an apartment size that is 700 watts. Now we are looking under the table and you will see coming up the wall that there is nothing plugged into the outlet. The table has a carrying strap which you see. These are portable tables that you buy at Walmart or wherever your local hardware store is. Everybody has seen now that I couldn't possibly hide a wire here. You can see there are no wires on the floor. You see the handle that is mounted to the table.

D: now we are at the back of the unit and there is nothing on the back. You can see my power strip with all the loads plugged into it in a certain way. You have the refrigerator and heater wires here and I have put clips to hold wire together from the microwave, sandwich maker, compressor and the hair dryer. There are no wires dangling anywhere. There's nothing hooked up under the table. There is 1500 watt description on the heater and the microwave is 700 and the sandwich maker is 800 watts.

K: hold the camera steady. Leave the yellow box and put the lights on.

D: The sandwich grill is one (he 'pumps' an outlet on the refrigerator generator; the microwave is on, the 3 light bulbs are on, the hairdryer is turned on the high setting, the fan is on high at 1300 and now 1500 and you heard the drop in the hair dryer. Of course the refrigerator is running.

K: I think we lost Douglas. (33.41 minutes). What you have seen and we showed the system live and it is literally running on its on with what is to be a Magrav unit and battery capacitors. We are trying to show something very special and I wonder if Douglas can come back on. We expected that this might happen at this point (Douglas loses his internet—34.30 minutes). If he comes back we will explain and he doesn't come right back I will explain something very interesting. This is a change in the course of energy production and this is the change in the world of power, politics and economy.

K: what Douglas will show you when he comes back on and we will see how correct we are: There is nothing under the yellow box; it is an empty box. This is producing 5 to 6 KW of energy indefinitely for as long as you need from the Magrav unit. There is a specific connection configuration which is needed to achieve this. For the first time when Douglas comes back and we will release the full video of this, the only thing that sits on that table that supplies energy is the Magrav unit, nothing else. For the first time we show the power of the plasma technology and for the first time we see the change has come. We need to accept the change. We were expecting Douglas to be cut off.

K: That is why we showed you the video beforehand. As we go live, if we get Douglas back you will understand that the only parameter once you trigger the plasma is the plasma itself. There is nothing under that yellow box. If you remember in the conference I opened an empty box and I said this is an empty box of universal energy. This is the yellow box. Once you trigger the plasma the way we have developed and create the right condition circuit you can tap into this energy. If you get your wiring connection the right thickness you can go up 300 to 400 KW. If you get your wiring the same way correct you can go to a pocket sized 3 Kw or 5 Kw. You can create a small unit that can supply electric power indefinitely. Now you see how and what we have changed the game.

K: try again to get in touch with Douglas.

V: we can see him on the zoom list and he is not responding to my messages.

K: What Douglas will show you when we get him back or we will make another video that is that the only entity on that table that creates energy is the Magrav unit. It is not connected anywhere so nobody can say it is a fraud or a scam. We have offered this technology to the American, Chinese and Russian governments and that is for exchange for peace. We have offered it to the world presidents for the exchange of peace. We have allowed it to be taken into presidential palaces to be tested. We have offered an olive branch to the United States that we are prepared to go with this unit to the White House and teach his Excellency President Obama to make one live. We go with this unit to Beijing. China and Russia have spoken in the background. The text I received means that they are in agreement and we are waiting for clearance from the White House and Beijing.

K: let me explain to you what this thing is going to do. Oil prices will plummet, the financial world has no ground to stand and the backbone of false money against liquid from the earth will be worth nothing. I have to tell you that there are 40 units around the world. This is not the only unit. We open this through Douglas for the protection of the foundation and the technology. If anything happens to me, to any members of the KF, the team will release the blue print world wide immediately which means that within hours and within days the energy prices will plummet. It will be the end. Exactly a year ago we launched a peace conference –energy in exchange for peace. Now we deliver the technology for energy for peace and the blueprint.

K: We have two choices. We receive the support of the governments and we see the exchange going through or we see the end of the oil industry and the nuclear energy and the rest of it. Any man on this planet can produce as much energy as he needs. But the secret of this is now that the energy produced is in plasmatic condition and now you can connect Magrav system to your flight system. And, everything is in the plasma condition. The lift is imminent. Once we release this you will understand. Once we release this knowledge the way we have shown it today

D: I am here Mr. Keshe.

K: what happened to you?

D: apparently the girls did something downstairs and overloaded the circuit and blew the main. And that shut the internet and my computer. My system was still running but everything else was out.

K: can you go back to your camera?

D: we can go back.

K: what happened is that I had to let the cat out of the bag.

D: you told them about the yellow box?

K: show them the yellow box please. There is nothing under the yellow box. Everything is still running and I will turn it back up.

D: (presses on the cable end of the refrigerator compressor) we are running 4,600 KW.

K: can you show under the table that there are no cables or anything?

D: yes. (43.06 minutes).

K: now you understand that energy comes from nowhere. We are talking about Kw.

D: there are no cables.

K: show us the yellow box please.

D: this is a yellow box that my wife made. The yellow box was just a cover.

K: Let me explain: under the yellow box was the trigger of the plasma and now that the plasma is triggered, we don't need it. Some of you picked up on the 6V battery needed to trigger the plasma. And now you can see it. You can see the source of energy is your Magrav system and if we redesign this system you can go up to 3300KW and we can shrink the size to what we need. In the coming days we will show the new versions. So, our hand goes the same as when we were across the table in Brussels with Iran and the United States. Energy and technology against peace. With this technology now you see 4.7 KW and it doesn't cost much to produce it. We are still developing the final phases of it. And, we show you everything.

D: the copper on this wire is already turning black where it was looped around the terminal. I wanted everyone to see that.

K: thank you. We have made a condition: energy for peace. We will take this unit and the Americans have asked that they want Yale University to see it. Usually you have to understand what happens when an effective technology comes out they ask you to take it to a university and then in the university they waste so much time to block you and do blind double checks, check the double blinds and everything else. That is to literally suffocate the technology and now that cannot be done. We are on the 'university' of the planet. 46.24

K: put the light to see if the system is still running. (The refrigerator compressor charges). If parity plus one would have been a breakthrough, 5 Kw is absolutely demolishing it. It is annihilation in the whole concept of energy production. There are no power stations; there is nothing and this shows the true understanding of the process of producing the system. There are no magnets; there is nothing--just the Magrav units. There is nothing in operation that can change the system; there are no motors, generators or moving parts. What we have offered to the office of the President of the United States is we move this table to the White House and let him check it. Our team will teach the president live, and the rest of the world, how to make the unit. We are not hiding it. The ones who talk about magnets and hidden will be shown for exactly what you have done and that is creating false information to justify their meager existence.

K: this is what we said 12 months ago and now the trigger point of the plasma has been found by the innovation team and has been applied. So in

this process we work as one team. Technology like this has never been shown live world wide; it has been kept in patents and secrets and then destroyed. This time it will not be destroyed; this is the gift from KF to humanity. We can teach you how to do it and we release the blueprint. The team is working heavily in the background in the 4 research groups doing the developing and researching. In time we will release the whole information as we did with the blueprint.

K: We make a deal; if you remember last year at this time we started a blueprint in November 26 in the Magrav system in the Keshe center in Balata. We are prepared to do the following: we will release the blueprint in the White House and let the President of the United States share it with you and then we share it with the Chinese and the Russians. There is a very big problem and you will understand that I will explain today. The Magrav plasma technology for peace has been tested and I explained this to the American people in the past 48 hours. And they understood. No one said this is a static situation with this core and this Magrav. You can imagine once you move in the dynamic cores what kind of power is released because the static is so powerful.

K: you understand that when you go to a dynamic situation and go back a couple of years ago and understand the interaction I've been telling you and now you can understand the connection. I have said that the time will come that the soldiers will not know why they are carrying a gun and they walk away. In fact we saw this and many times I hinted on this and none of you picked it up. These Magrav systems in another form were used to jam and block the most advanced ships of the US Navy did not just do that. This is the point where the common ground stopped and nobody looked beyond. The twenty seven Naval Officers who were touched by the plasma field were given the balance of peace and they literally walked out of the Navy. The excuse was that they didn't see their government able to support them to protect their lives. But in fact the elevation of the soul of the man through the system showed the officers there was no need for war. The rest was to put it in the world. This can be practiced across the world.

K: in the coming weeks we will release the dynamic flight system where using a specific combination man will drop every gun. There will be no reason for fighting; this is not a theory. Twenty seven American naval officers walked out. We can make this 27000 or 27,000,000. It is very, very easy. This is power of the KF. Once it is on the table to change the course

of humanity there wood to burn, no nuclear atomic or no oil. This is the transfer of this energy if you understand it. If you put three of these core systems in power with each other in a series with \$200 or \$300 you can run a car. The system will fly the car and now you have seen it. This is what I call the table of the Last Supper of energy. The old is finished and this is the beginning. This is world change and this is the beginning of what we said...energy for peace and we kept our word.

K: we have some of the people, the most advanced scientists of plasma technology within the KF. It is your turn to change the course. I put the hand of peace to the Americans once and you know as you saw the results of Iran and the American talks. This time I put the hand of peace across to the Chinese with his Excellency President Xi. You wanted to see the proof...it's on the table. Also the President of the United States wanted to see. There is a very funny thing; we don't need to import this to show it to the American president. It is built, developed and finalized in the United States. This is 15 hours drive to the White House makes the difference in the world peace and change of the course for humanity. Douglas is ready to move if the White House opens the door. We have given a clear line and we are prepared to move with the top 10 KF scientists to the White House by Sunday. The ball is in the court of the United States President, the Chinese President and the Russian President. The point is, we have brought the change in.

K: if you understand the next step into this. In that microwave you warm the water and if you connect it the right way you can go in that microwave and pick up the energy you need from the food you wish. The same with the refrigerator. I open this technology very rapidly in the coming days. You can bring the water into the container and the container will carry the energy of the microwave with the energy of the food with the plasmas you want to fill the water with. You want meat or oranges and the system will feed the cup. Drinking the cup is your next step. The next step for the technology development is how to change the course. Douglas just talked about how the wires are nano coated. Once you set this system up and it goes into action, especially the dynamic, melt the copper wires, break the nano materials and the fields will follow the path you have set by the structure.

K: You have seen the DC lights, Peter's AC, different powers; it's on the table. There is one thing—that stacker in the corner is the Magrav unit set by the structure of the whole work and this is the job of the creation and the

Creator. Those of you who understand this will run with this. We ask you one thing: is peace worth it to change with the energy? I think yes it is. We ask you to bombard the White House to accept the call. We will be there and this is especially why I continuously showed Douglas' unit, because it is on the mainland on the United States exactly where we do not need to fly. There are no bargains and there are no hassles. Douglas, how many hours are you from the White House?

D: Mr. Keshe, I was stationed in Belvoir (?) and it took about 17 hours on the bus so we are looking at probably 13 to 15 hour drive.

K: would you like to drive with it to the White House and we get you permitted to go into the White House?

D: if I can do anything to bring about peace and stopping of the killing of the children, anybody for the matter, but especially the killing of the children, so anything I can do I'll walk this stuff in a back pack to D.C. My heart is dedicated and I have 4 small children. And I have 2 older ones headed in this chaotic world with murder over energy and suppression of it has to stop by the few that run the world. They have to come to some kind of sense.

K: would you start the path on Saturday to Washington and we will meet you at Washington? The President can check himself and you can teach him yourself. If anyone wants to join Douglas on the way to Washington DC you are quite welcome. Contact the webmaster@keshefoundation.org and we will make a path and pressurize the government into peace. I have told you that if we will change the course of elections in all countries. Energy for peace will create and let me explain this, if you just look at this in the physical matter state, this creates warmth and heating. If you put a condenser from the energy that is not used you can extract water from the atmosphere and the water needs can be met. If you understand the process of the Magrav system you can energy to the water and there will be food. We start the peace as the course, as the path of peace.

K: I explained very simply in the last few days that we appoint 6 counselors. We are not appointing a new government. The time for governing is over and the time for consulting and using each others knowledge to share their knowledge is here. With this new technology we can develop new medical systems that as we have said we will do and now we change the course of the whole history of the man. In the past hundred years it has been hard to produce energy freely and this is free energy with the plasma Magrav systems. Will you put the light on Douglas to show that it is still working? There it is at the touch when you need it. We organize

for Douglas to go to Washington and to be there on Sunday. It is for the government of the United States to allow the unit into the White House. It is portable and anybody can come to see. This is the road to peace.

K: We have no choice but to pressure and to deliver this way. If you want to produce 20 Kw or 100Kw we can show you how. There is no need for cable transmission and there is no need to suck everything out of a nation's raw materials. Everything can be done through the system. Now you understand what I said at the beginning. We are here to change the course and we have changed the course. There is nothing but plasma and there is not a single piece of what you call generating systems that are dynamic. Everything is in solid state and the new system development will push us to the next one. The problem is we have brought peace through energy in equal amounts and we teach this world wide the way we did in Magravs but our team, the KF Team United States will be at the White House in the United States on Sunday. Go public with it; they cannot deny it. 5 Kw on the table connected to nothing. And it can run for probably centuries. Is there anything you want to say Douglas?

D: yes. I'd like to say, number one, that there is no trickery, no Joe Cells or any thing. The answer is in front of you right now. The answer to this riddle is in front of you and the (yellow) box was just a ruse. The battery was a ruse.

K: we needed it to trigger the plasma and now we don't need it.

D: what I want to show you is that this is 18 gauge stranded automotive wire (connected to the lights). That is 18 gauge that just pulled 5000 Kw and anyone with electrical knowledge knows that 14 gauge stranded wire ___ in 2 at 1440 watts. So the only way this happens is that the wire becomes nano coated inside. This one here has been stripped to make the pigtail for the 3 lights and it is solid black on the inside. The outer 2 ends still remain the natural copper color we are used to seeing. Inside where there is no oxygen for it to oxidize it nano coats and becomes a super conductor. This is how this doesn't melt down. 18 gauge for 5000 watts for crying out loud we don't make such wires and they have to be super conductors. That is part of the key right there, to be able to make the wires to conduct and it doesn't allow the amps to affect the wires the way we normally see.

D: The other answer to the problem is in front of you and it took me awhile to figure it out. Mr. Keshe can tell you how it works.

K: we will discuss it in the White House if the 'house is white enough to share the knowledge.'

D: I would like to see them white enough, black enough, green enough, Asian enough to share their knowledge—whatever color they want to be, I don't care. I totally believe in that to my core that we should all have equal platforms. I am all for capitalism but what has happened to world is not a pleasure to be in any more. This has to stop.

K: what is your background work, Douglas?

D: United States Veteran in power generation. I grew up working with this kind of stuff; my first project when I was 8 years old was when I tried to wire a 13 inch TV set into a 1978 8 track player. In my mind I was building an amplification device but I blew up the TV instead and got my rear end warmed up. I have been doing that every since and I've been playing with electricity, mechanics and building engines since I was a child. These things come naturally to me and I don't know why. It might take a day or to and then it pops into my head to do it this way. I graduated at age 17 in Belvoir in the corps of engineers in top of my class with a 95.4 and I was a high school drop out. I argued with them all the time and I knew the speed of light was a lie and people like me in school were labeled as highly intelligent were labeled as trouble makers. Later on I found out in college in computer engineering I gave that up to be outside working in the trades. I did not want to be in an office. I saw too many things going on in the office.

D: recently I was prohibited and couldn't even dig a hole in the yard without having to sit down. You'd have to know how I was 5 years ago and until recently how I moved. I move like I'm 20 again due to this technology, not only emotionally, but physically. The strength in my back is just affected periodically by weather changes. This has been an endeavor and my quest because I have known for a long time these things are lies. In the summer time they raise the rates in the US. Everybody gets a bill at the beginning of the summer and they say that due to the increase in power usage the US says we will raise the power to summer rates, usually 3 to 5 cents depending on your area. The reason is that we are not using resistant loads and most people hang their clothes out. The air conditioner is a non-resistant load and there is a key to these non-resistant loads with high voltage discharges. The air conditioner unit even though it is 220volts takes an initial voltage and then it drops back down to wattage consumption that is minimal.

D: They jack the rates up in the summertime to compensate; if they didn't you would see the great discrepancy between winter and summer and you would start asking questions. They don't want us to ask questions and that has been the key this whole time to keep us looking at something else so we don't ask questions of importance. That is why they have to tie into our ground to give us electricity. They don't tell us that they have to; they tell us that we need to put a ground in and they don't tell us that after they get everything connected they connect their ground into our ground. That is the way electricity comes back and forth.

K: so now you don't have to be connected to the ground.

D: the system needs to be tweaked; we built this out ... I have the ability to go to a scrap pile and build things into something.

K: let me explain; this has been my aim and my job from the beginning and as I said before when I received my degree from Queen Mary College in University of London as a nuclear engineer, I stuck it on the toilet roll because that is what it was worth. In the space there are no doctors, engineers, or professors. We made these things to create pressure on the others. So my motto for the past thirty years has been: *I bring the technology that the common man of the street can use, understand and develop.* Douglas is an example of this. We have seen Arman who has become one of the masters. We have seen many, many people—housewives with no education building Magravs. If you build a Magrav and it didn't see the way to run it now we give you the production units in the next few weeks that you can change your Magrav unit to a generator.

K: can we see your Magrav unit? (1.11.25 Minutes).

D: yes, it's live and I'm used to touching it.

K: the beauty of this is that you can set your Magrav unit in gans water and then you will see different results.

D: I have one here I can show that I am working on. It's going together pretty well and you can see the coils are caustic coated. I have always been a fan of the caustic coating and doing the connections like this. Then I take NAOH and sugar where they are bent back and some of the coating has come off. I will put the sugar mixture on there and it will re-nano coat it especially if you put it out in the sun.

K: let me tell you something; we showed the tool for energy for peace worldwide. I am the head of KF worldwide; I have no voice if you don't want to share yours. There are hundreds of you on line and it doesn't matter what language you speak—express yourself and demand from your governments and I leave the line open. It is your job to pressure your

governments to accept the free energy for peace and now that the energy is free it will take a few months worldwide to cover the whole structure. What is your saying to your government in your language or in English? Vince, open the lines and let people speak.

K: do any of you want to say anything to your government or to humanity about what you are going to receive with this energy? Or would any of you like to see the change and in what way?

R: I live in Canada and I certainly wished for this kind for this kind of technology for my whole life. I realize that this is the core technology for the rest to come after this and it's the most important thing in my life having this come to pass. I have dedicated my whole life to helping people in this transition time where we learn to interact with this and my wish is that the governments of the world, specifically the Canadian government will adopt this technology and embrace it with open arms and not with other kinds of arms. We don't need to be dealing weapons with other countries; it is the end of that kind of thinking. It is time for a new kind of thinking, acting and eating with this technology. I am looking forward to it and I think it is a great milestone and thank you Mr. Keshe for bringing this about and making things happen in the world with this.

A: I am Iranian and Canadian and I am in British Columbia now; I want to say that the unity has already been achieved; we have already 'won' and this is the start of it and it is time to really bring the earth and the entire universe into balance and peace. And, we are connected to one another in a very deep way and we have realized as of this moment the love between all of us can go and change the history as of now. Thank you.

J: I want to speak for the French people. (speaks in French) *..merci a la Keshe Foundation....*

G from Kenya: I welcome this technology and I love peace and we can no longer consider the power by killing people and killing should end with this new technology of KF and we are sick and tired of seeing deaths all over the world and people killing to be so powerful because of how they kill us. People come to our countries and claim to be so developed because they are very powerful killing machines. (now speaks in Swahili for the people of Kenya). Thank you Mr. Keshe for bringing this technology to the world; we respect you and we appreciate this technology and very much look forward to peace all over the world. Thank you very much.

V from Singapore. I would like to share a short story of something that happened 2 weeks ago. I had the pleasure of meeting and talking to a gentleman who is an engineer in the oil and gas industry. We started talking and he told me about what he was doing and then he asked what I was doing. I told him about Keshe technology and Magravs plasma. After I finished talking he told me that he looks forward to the day that the oil and gas industry will come to an end and in his opinion it is the dirtiest source of energy that has been used on earth for such a long time. This has to be succeeded by something that is clean, natural and benefits everyone. I would like to put this call out not just to the government of Singapore but to all governments of the world; the people of the planet have been suffering for a very, very long time. One of the tools used to control the people is energy. In essence we have been putting people into prison and that ___ is ready to blow up. There is nothing you can do about it. What happens when it blows up? You have rice everywhere and it is uncontrolled. We are at a very important crossroads right now where all of us can benefit and move together into the future as a people. Or, certain factions and those who wish to retain control could be left out. I think it is much more beneficial for all of us to move together into the future as One Planet, One Nation and One Race. I put this call out to the governments of the world. *Please join hands with the people of the world to welcome this technology into our lives. Thank you.*

K from Austria: this technology brings balance to our lives and no soldier wants to fight any more. It brings balance to the proportion to the relation of the feminine and the masculine so no more women will be suppressed anymore. It brings peace to our hearts and balance to our bodies so we don't have to suffer any more. It brings free energy to our houses; our souls already attracted it. Let's all together accept it.

Kav: I just wanted to say that this knowledge should be and we started awhile ago and it unconditionally taught not as second nature but natural nature knowledge and even the womb of the woman, society's media and children in school, universities everywhere. We don't have to pack this true knowledge into any kind of stories like Harry Potter stories with a kind of magic show and finally we don't need name it with the Khazarian Mafia or Jewish financial military industrial central banking system. It doesn't matter any more; let them saturate this inner desire, feeling of *oh my god I want to have something, see something tangible* and let them saturate it for Christ's sake with this already almost cult cliché of free energy. This is why this

goes beyond the imagination and comprehension of people and what it can go beyond is whatever vibrating energetic matter technology. It is already 5 past 12 and we are on the brink of a 3rd world war. People have stuck their hands in the sand and don't even realize what is going on. But it is generally accepted; that is the crux of the whole thing. It is getting out and we are doing it collectively. Let's start with the children, women, men and entities within and beyond this earth and universe. Thank you.

M from USA: the elite have had a long good run and not so good and maybe it time for them to realize that it is over for them and we need to come together, all of us together and move forward in such a way that we understand each other and realize our system is rotten to the core, corrupt and has lost its way. We need to change that immediately and that brings the change. Let's do this together. Thank you.

S from US: I love my country; I love the people that are in it, my family and I am proud to be American. I think it has ability to show its compassion and love for people. I feel our country was built on freedom of religion, acceptance, tolerance and peace and to me that is place our country should go –to bring out the peace and the love. I am sure with the hearts in America this will be. Thank you Mr. Keshe for bringing this about.

?: your governments totally thought that you should have in the next days is how to make the transition as smooth as possible; focus on the transition and nothing else. It's out of the bag and we all want it.

R from Philippines: I want to really express my gratitude to the KF and Mr. Keshe for allowing humanity to develop its best in this technology and I believe the transition will go peacefully and I believe that everything for humanity will find abundance in this technology. Thank you for all the people that have been working with this technology and especially the Keshe Family and the KF that allowed us to develop. Thank you sir.

K: our Chinese friends are writing heavily in the background, would you like to speak? You are 1/5th of the world's population. You can speak in Chinese.

One wants to speak; speak please.

K: Let me explain to you; at 11 o'clock or around 11 o'clock Professor Zhu of the KF China was renegotiated between KF and Chinese government most probably will join us. To Professor Zhu we have been trying to negotiate the path of peace with his Excellency President Xi and other

aspects. We are waiting for a response from the office of his Excellency President Xi through Professor Zhu in the coming hours. We have given a deadline both to China and to Russia and to the US to respond to this technology. Otherwise as we said this unit as you see on the table will be driven to the White House and we will indicate the path that Douglas will choose. You can follow it and join it. This is not a march for energy but it is a march for peace with this new technology. It is not just energy, it is space, it is food, and it is agriculture. Now as we go to top restaurants and top places in the world we see doctors and engineers as waiters and taxi drivers. We see surgeons because they have no jobs for those with these degrees. With this technology we don't need doctors; we are all doctors and professors in the field of plasma as we will need to be in space.

K: This new technology will not create jobs that are the wish of the governments but will bring peace to the people of the nations and governments do not need to be there to govern. As I said we will hear from Professor Zhu around 11 o'clock. If as a resident of KF China and the mediator between KF and Chinese government officials he is prepared to open and respond back to us. They asked for time and said they needed time. Our time finishes on Sunday in the White House. Go on the media and tell everyone; they can come and see and this is not a magic show. If I can read you something that has gone to the White House and we put it where it could be seen and it was very simple: *with these the President of the United States to make nano materials and we show him how to make generators and through that live, we will teach the world how to walk away from the shackles of the energy.*

K: I wonder how true are the offices of the world leaders in giving a hand to their citizens to come out of the lives of poverty. We have seen a number of people who are and developed systems that can produce gold. It is being shown on the internet in the past few days. After this in the next few weeks we will show you how to produce gold as others have achieved it. They followed the procedure I set out a couple of weeks ago and they have managed to do it. We will bring them in and you will see the first signs and then we will build on it. Let the Chinese speak please.

W from China: hello Mr. Keshe and everyone, this is ____ from China and the music is my husband playing the guitar and I hope he can also bring the peace and love to this entire world and then the excitement of this time. The first time I heard about KF I heard about this technology and I said *it is the hope for all the world and all the people. It can free the people and liberate*

them from control and have more freedom and end the war and everything. That is too amazing. At that time I wasn't so believing this. Everybody said it is too good to be believed. Now I say that it is true and thank you to bring this magic technology to all the people and thank you for everybody. I want to talk to our government, china's government to please bring this beautiful knowledge and share it with all of China's people. As the Asian country and as the responsible country we are in charge of the world on our shoulders to be and act as a great China and all the world will thank you for your decisions. For those people who want to destroy this and prevent this please listen to the cry from the heart of all the Chinese people. If they have all the beautiful future with this knowledge.

K: would you like to speak in Chinese to all humanity? Please explain in Chinese.

W: she addresses in Chinese. Ok, thank you for everything.

K: thank you very much.

P from Togo: the new world for the people especially for Togo government we want to say thank you and we invite you to more interaction with our people to give them life. We receive everything and our people say thank you for the life and peace. We want the peace to be continuous and we want to tell all Togo people *thank you and invite you for more interaction with people of Togo. Thank you.*

W from LA, California, US, and I am Vietnamese American and I was a refugee as a child during the Viet Nam war. I escaped from Viet Nam in the 1980s and I witnessed the Viet Nam war ended in 1975 with bombs. My family and I were running from the war and later on I escaped from Viet Nam and now with this new technology with KF, thank you Mr. Keshe and Douglas that you bring the technology to us. Please to the world leaders, we don't need more wars as are being created in the South China Seas. We love and care our children and our families need food to eat, a home to live in and energy to survive. We need to leave in a peaceful world. Mr. Obama you are a minority too and you understand the hatred and the discrimination. Me too, I understand that because I live in the US. I struggle for energy, I struggle day to day to make a living, we are equal now with this technology. So my wish and my best for every human being. We have to get away from machines guns and we have the Vietnamese population world wide that stay away from Viet Nam. Please you guys speak out because you witnessed the Vietnam War and 3 to 4 million people died for nothing in that war. Three countries that were involved—US, Russia and China. Viet Nam was in the

middle of it. So please, this is not time for war anymore; this is time for peace. Last wish...thank you very much.

E from Germany: I would like to talk to my government in German. (He speaks in German).

K from Switzerland and I want to address in German to the world presidents and to those involved in climate

Professor Zhu: can you hear me? Sorry I was late.

K: let me explain to you Professor Zhu, a unit as you see on the screen with free energy connected to nothing that we have shown... Douglas turn on the light please. This is fully controlled with 4.7 Kw with nothing but a Magrav; nothing is connected to the system and it is the unit that we promised you we would take to Beijing. So, we can see there is nothing there to say there is something behind it. The yellow box is taken away and that is the message I give you to take to President Xi; this unit will cost nothing. It has the Magrav unit and other bits in the background and there are no magnets or circuitry. So this is the message from us to carry to your leaders in Beijing and to the others you negotiated with and connected with us. We are taking this unit on Sunday to Washington to the White House to be shown on the road to anyone who can join us. They can test it; they can add their own system to it and test it and enjoy it. So those people who made the Magrav units in China, now they can convert it to energy and the energy becomes free. I leave it to you what you want to do with the Chinese government and officials and what you think. We have heard appeals from Chinese who would like the government to take it up. We heard from the Americans. You are the man between the KF and the Chinese authorities.

Professor Zhu: thank you for this opportunity. Indeed I have been on here for 15 minutes and quite a few people give great praise for your contribution. So my communication with the middlemen and the secretary and I have conveyed the message to the secretary to the assistant General and the message will be passed to him in China time around this time. The middlemen took my message immediately and he gave me messages I sent before. He thinks this message is critical and important for China and the rest of the world. He told me that they were not expecting this and we are waiting for a response.

K: thank you very much. I think understand more than anybody as a professor in the university, as a scientist and as a medical doctor that this changes everything for China. You become energy independent as you have seen for a few dollars.

Pro Z: yes, exactly.

K: this is the hand of peace to America, Russia and China.

Pro Z: the middleman will transfer the message to the secretary of President Xi. And they have been friends for a long, long time so it is very easy for him.

K: people don't need to know the background. We need for the President of the Chinese government to pass what we ask and we know there is a G20 summit meeting in September. In the next week the Keshe supporters will deliver the unit to Beijing as they did in Washington. We need to do this with equality because as you know and I know China has access to the technology as you said in your writing. Russia and China have already negotiated on my technology. What we need to know is that we can use the energy as a tool of peace. We need to get a confirmation from the Chinese government that such a flight with the technology to be supported. We teach the technology across China to build this themselves for the Chinese. We need this to be done and we will see a huge economic crush across the world because of the loss of oil they have been using. But it came from nothing and it will go to nothing. So we need to support and to confirm from the Chinese government and the American government that we can take the step for what we call the flight of peace between Washington and China in receiving the technology and offering the same. We offered the same thing to President Xi as we offered to President Obama. We teach him to build the unit in the palace live and then the rest of the nation can follow. This is our wish and we expect the response to be correct.

Prof Z: yes. Very good. I recall what Neil Armstrong said when he landed on the moon. This is a small step for KF but a giant leap for humankind.

K: thank you very much; nicely put. Professor Zhu we look forward to hearing from you with the positive results in the coming hours and days.

Pro Z: I do my best to address this as soon as possible.

K: would you like to address in Chinese as the spokesman to the government of China, please?

Prof Z: yes (and he addresses in Chinese). Thank you very much Mr. Keshe.

K: you are welcome; I hope we see a positive answer from Beijing in the coming hours.

Prof Z: okay. We will let you know.

K: thank you.

A: at this time make sure to serve and to serve from your heart; there are going to be big changes coming in and the only way we can work is to serve

from your heart and give what you can to help another human being because we are all one—simple as that and then everything will go well and be well.

G from Ghana: thank you everyone; we know that change is coming and we will see more changes. From the KF Ghana family we thank you all.

F from US: the technology we have seen today is the beginning of a new future for mankind and this breaks all the shackles that we feel bound by, starting with energy. And today is the beginning of a new future for Americans and for all people on this planet. We have been given away. This will provide energy in all forms that we need and we don't have to harm the planet or kill anyone. These devices are what we need to build, share and use to bring peace and abundance to everyone. To the US government *keeping the status quo as you know it is over; stand down, listen and learn to all the US citizens who truly care to bring peace and prosperity. Thank you Douglas and the innovation team and thank you, Mr. Keshe for all your unconditional love and for bringing this wonderful technology to this planet. Thank you.*

C: may I speak? Spoken in a foreign language with deep emotion.... Thank you Keshe family for your support; we are one soul and one in peace and let's make this earth beautiful please.

L from Norway: I want to this to the nation elders and the leader of NATO. I will say this in Norwegian.

L from Turkey and Russia: I'd like to thank you Mr. Keshe for bringing this knowledge to us; we need peace more than anything. We learn always from past wars and past peace. My country, Turkey, had a big lesson and just last week 5 million people came in one state together to deliver a message of peace. Because people understand they can come together and I lived in Istanbul before I came to Russia. This was a good message for me. Now I will try to talk in Turkish. ... Thank you.

K: we have a problem with James' transmission; it is coming in pieces and is not audible. Would you like to show us the lights are still working? There you are energy at your fingertips...no problem. This is energy on demand at no cost. This is what is available in space and in space we do not have to look for power stations; we don't need to. Now we understand how to absorb. Don't forget as I said before, *this is a beginning and the step to the new world of science.* We have to understand that we did not bring this technology into open for changes on this planet but we brought the technology for humanity and the universal community. Many of you build

on this and use this and other technologies that are being developed by Keshe foundation families around the world. Now we are bringing governments into play and this is the change. Now we will not just do this in kitchens and garages but in the most advanced laboratories and offices of the governments and universities. We have already achieved this in a couple of countries where the KF has become part of the structure of the teaching and governmental organization research.

K: our next goal after this by September is to show the flight system. Energy was the biggest breakthrough that you all wanted and we satisfied this thirst. We will deliver this technology on Sunday if the doors of the White House are open for Douglas to walk in. we teach the president as we teach his family in Africa and there will be not difference between the White House and Africa in learning the knowledge. A man whose forefathers brought the man to the White House, now the man in the White House can teach the man in Africa how to become equal without going to troubles and slavery and crossing the seas to have a better life.

K: This offer for the better life does not matter where you are in this universe. The power of what has been shown today will hit the world in a very short time but with a huge punch. In the next 24 hours the KF website will have the map for the drive from where Douglas is to Washington. If there are one of you or hundreds of you, bring your systems and connect them to the system in front of the White House and see it working with no connection and then we teach and open our blueprint that we are satisfied with the final one that everyone can build it and everybody can use it. The KF team is hard a work in the background.

K: Douglas will leave on Saturday and we will line the map. If you are true peace lovers meet in Washington and he will be in front of the White House on Sunday. I wonder if the White House is white enough to open the door. Does anybody else want to join us?

A from Bangladesh: I lived half my life in the United States and the other half in Bangladesh. There is no more need for energy held for food. People in Bangladesh, even the literate ones are learning how to do this. They are benefiting from the health and they are getting the power as well very soon. Those who are in power can follow these people and we can achieve the peace. Thank you everybody and thank you, Mr. Keshe.

J from Ontario, Canada: I just want to say that this technology solves all of humanities' problems. I want to thank you Mr. Keshe for bringing humanity peace by sharing this knowledge. The world cannot afford greed, war and poverty. There will be prosperity for all people and we must embrace this knowledge now. We ask the Canadian government to begin a plan to implement this technology immediately. I want to thank all the members of KF for their hard work to bring this to the world and Mr. Keshe who found the technology, figured it out and the KF has brought it to us. It is just amazing what you have achieved. There is a funny way to look at this. We used to talk and look at the universe as 'earth centric.' We used to think that the earth was flat. We are at a crossroads now and we will realize that there is no option but to accept this correct path of plasma technology. It is so simple; thank you so much.

D: we have the map to follow through Kentucky and Virginia to there. I hope we are accepted; these people don't seem to want to give up the control through energy.

K: it is not for them to accept; they have no choice.

D: I have heard you say that with fossil fuel we would have to have dinosaurs stacked to the atmosphere and I have always agreed. And most people don't know but geologists will tell you that the fossil layer only goes down to 18000 feet. They never found a fossil below 18000 feet and this was a scheme set up in 1892 to make 'fossil fuel' as a never ending source through the gas and the salt level and that seems to be how it works. It pulls up and replenishes everyday and they have us convinced that it is running out. So they jack up the prices and control us through that form of energy. Now if you look into oil drilling you will see that oil is usually below 20000 feet so it is far below the fossil layer so how can it be a fossil fuel? Nobody asks these questions and when they do they just get ignored. Most people that brought forth a form of supplemental energy, or partial free energy, and nothing is free when you have to build it and put work into it. These people that aren't so receptive that have done this in the past, I hope there is a dimensional shift. Nobody seems to notice that Hillary Clinton is having all these twitches since the 15th of July when Mr. Keshe said that judgment has begun. Some of these people in positions of power are starting to act strange.

V: Douglas there is no other; it has changed forever and we have to love and respect everybody and we are all as one. Everything from the past is forgiven and forgotten.

K: let me say something. A couple of years ago on the 13th of June we announced we were going to the Vatican to give the peace message to the pope. On the 16th of June a number of people from across Europe turned up to be in the Vatican. Now we call on all of you who can have access in the United States; it is worth the trip to be at the White House on Sunday. It doesn't matter who or where you are or what color, shape or size, try to be there. Don't look at the cost because the cost will be paid back by humanity. I call on all the KF who can to be in Washington on Sunday. Make it to Washington. The only thing is the security can refuse, but Obama knows that we are outside. We have already passed the message on to Mr. Kerry through our contacts in the White House. We will be there on Sunday. They wanted Yale University to confirm it before the President accepted it. We stand outside and you are inside; we are free and it is your turn to walk out. Walk out to us and bring it in and let the peace builders not the war makers make peace.

K: This is bad news for a lot of countries. Exactly to the week last year I was in a hotel in northern Italy and I met with a Saudi prince who was staying in the same hotel as we were and I said to him and his advisors: *you better start loading fuel on the ships; they are not going to be sold anymore. No one will need them.* I asked him for a consultation with the King of Saudi Arabia that we could stop the process. The development in a way that not so much damage would be done to the Saudi income but as of today exactly to the year, there is no need for oil. We start releasing the technology and as I said we are keeping it in a number of places and if anything happens to any member of the KF we will release it.

K: you have to understand that we have access to a lot of communications and we know what the plan is. There is a huge plan paid by governments to assassinate me in the next 3 weeks. The assassination has been paid to assassinate me, Caroline and ___ together. We know who is doing it and who has paid the money. It all goes back to the lady who spoke the language and cried. We are fully aware of this and we have no fear; we are here to serve and we serve till the last second that we are alive. Today we served it. We even know which company has paid the money and that is why there are no outputs on the guys who were shouting and having false play. Because they have been paid to go silent. So we have 2 choices. We have three weeks while I am alive according to the payment of the Belgium government to assassinate me or we transfer the knowledge right across and we protect humanity. That is the reason.

K: that is the reason that we have to share the knowledge as rapidly as possible. On Sunday we deliver it. We have moved into a safe place as was asked for by the Italian government by those who are programmed to do it. Now you have 3 weeks while I am alive if they manage to assassinate and we give you the name of the company and the people who have been paid to do it. So Sunday is the beginning. Move on and we change the course. At the same time we have to bring the change in; there is no time. There is no time and the change has to be very rapid and to be in the way that brings balance to all of us irrespective to time, place, position, power or whatever.

K: let me explain to you one thing; this is the beginning. Now you have seen it. The minute Douglas touches the light bulb energy appears. Would you like to show it to them Douglas? This is with the touch of a finger. In the coming weeks we will show a dynamic, remote system that means the energy will be available to mankind right across. At the same time we can load the system as Douglas does. The war game is over; the killing is over and there is one thing to understand: if we do not do this we have let our children down. We have put man back into slavery for more time. I have no fear of being killed, paid for by a king whose time is already be over. There should be not kings. There should be no man higher than the other as in space we are all equal.

K: You have to understand one point and that is that on Sunday we will be at the White House and the White House has to stay white. It is the same with Beijing, Moscow and the rest of the world leaders. When I released the knowledge I released it to humanity and not to one or two nations. The next step is change of the course in feeding, health and space will come last. We have to clean up the house before we can move. So understand that in the coming weeks we will introduce systems that you can not even imagine. We will introduce systems that by flying over the countries we eradicate cancer. You will understand. We promised energy and you will see the rest. We will deliver systems so that no man will feel hungry. Man will work out of the pleasure to serve and not out of the need to survive.

K: This is the second time I have put the hand of peace across to Washington. The first time we succeeded with Iran. This time we will succeed with the world. President Obama this time you do not need to ask your ambassador for the key. This time my ambassador, Douglas, is at your office and this way you can accept the ambassador or peace and knowledge.

The only one who can fail in the United States is you and nobody else. The same goes to the Chinese leaders. We respect you as world leaders but you have to understand that the world needs to be led by the men of correct conduct.

K: there is something important I have been asked to address in respect to the government and the president of the United States. Today is not the time for it and in due course we will address this. I have been asked to withdraw support for certain nations and all nations are equal. I have been asked to *give to us because it is your responsibility to give to us because it is ours now that you have got it.* I have shared it and a number of people know what to do and how to do it. But we all have one common ethos: *ENERGY FOR PEACE.* You guarantee us peace world wide and withdraw from all wars and we deliver the technology world wide.

K: There is one reason for the way I have done this. You have seen that we have delivered the most dream of the man to have energy in a very simple presentation, live on the camera. None of you could imagine; we always made announcements before time. This time we made no announcement until we announced to the governments what we are going to do today. It can be done. It will take you less than a few hours to build a unit; and then if you have a Magrav unit you just need to add a few pieces to it and it will work.

K: All the ones who went and became and set up websites and false accusation and accused us of scam we thank you for it. Our traffic internationally shows you have created more traffic for us and people to join us than our own supporters who were busy building the units and the technology. Thousands of people were sharing the knowledge to build and what you called trolls became the spokesman. When people came in they saw it and they sent the booklets to say this is a scam to our supporters. Thank you very much for that too. Now our supporters have to test their own knowledge if they were true givers. 2.32.55

(Notetaker: the notes are not completed yet from 2.32.55 to 4.08.16).

4:08.16

K: we start a total Sat. lunch and stop at 6 or 7 at night and take a rest. We can meet at the rest point and you can choose. Then start 6 or 7 the next day and make the way to Washington. Anyone who wants to join Sat. night

make a point that you can meet and move together as a peace movement and no conflict. Kiss and cuddle the police officers and make the change if there are 2 or you or 10 of you. It is time to change and we have the power to do it because we have the technology to do it. It sits in the background. With the touch of the finger the light comes on at no cost and you can do this for hundreds of years. Douglas, take over and let us know where you go from there on.

409.31

D: I will be traveling from here to the straightest route possible across through Kentucky and Virginia and on to Washington. That would be the closest route possible for me where I am. It's a 15 plus hour drive, closer to 16 hours.

K: allow 24 hours; by the time you meet friends and shake hands and talk it takes a lot more time.

D: yes, exactly. Meeting others and finding a local spot to meet. Now we are getting out of my league because I wouldn't know who to talk to and where to go.

K: we put the banner of the KF on the car so it is easy to find; the table, generator, microwave and everything will be on that table; this is the table of peace. As I said, it's the *last energy supper. It's the dinner of sharing energy equally among mankind.* So, when you see the table you know which car it is. If you have any banners and if you have done anything, bring it with you—one or two or ten people, it makes no difference. It is the intention that will change the position in the White House. We go live by tomorrow morning again to understand the planning and we go live when Douglas starts from home on Sat. We meet at 10am tomorrow on a live teaching for those who want to be there and to plan. And then we wait for Douglas to tell us what time he starts and we will be with him. One person or the rest of you. You have been crying for peace; now let's see how true your cry has been. You have been wanting free energy and by the time you get to Washington you will have it. But we allow the President of the United States to teach his nation how to make it. And that is why we have asked; my writing to the White House this morning is very simple and I read it to you as I read everything as we are open. I wrote the following to our intermediaries:

In the teaching today I am going to announce that we have made this offer to the White House and asked people to put pressure on the White House to accept the test in the oval office on behalf of the nation and then

take this to Beijing as a sign of peace. We have offered directly in negotiation only of the delivery of the technology.

Tell them we will teach the President how to make one generator for the White House. And everyone can follow live and it costs less than \$100 Euros.

Do you think the President will get his hands dirty to make gans, coil and a generator for his nation to be prosperous again with free energy? I say yes he will do it. This moves Hillary Clinton in the Oval Office, we guarantee her in the office as the next President.

Now you understand. The technology is the key to peace and we deliver it. We meet at 10 o'clock tomorrow and meet for ½ hour to 1 hour and then we will see how Douglas tells us his plan and you can join us at any point on the route. Ask people to go viral and let people see the energy unit; it is not a dream. We keep one thing on all the way from Douglas' home to the White House. It will be the 3 white lights you see on the table. They stay on all the way in to the White House with the white light and that is the message of peace. Free energy, free light, free peace. Thank you for today and we meet at 10 o'clock central European time on Friday which is tomorrow and we start the process. Thank you indeed. We meet tomorrow at 10 o'clock Central European Time.

R: this is the end of the 128th Knowledge Seekers' workshop for Thursday, August 11, 2016.

One Planet, One Nation, One Race

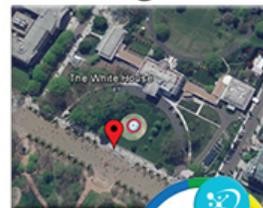

14th of August, 2016

White House, Washington, DC

**PLASMA ENERGY
IN EXCHANGE
FOR WORLD PEACE!**

www.KesheFoundation.org

We are delivering the first plasma energy unit to the President of the United States. It is so simple that even the President can make a plasma generator in the Oval Office, for free!

You can follow on Live stream and Youtube!
