

144th Knowledge Seekers Workshop 1103-2016

<https://www.youtube.com/watch?v=yUE4MhJkaKc>

Mr. Keshe (K): Good morning, good day as usual wherever and whenever you listen to these teachings. As we all witnessed in the past week's public teaching we saw the establishment of what we call the Earth Council to replace the world governments. In the process of the past week we have seen some positive indication of some governments in what has been put that the first step has been taken. We have to see how the responses gather in the coming time and we see how the Earth Council (EC) will represent itself in the coming weeks in taking what we call leadership to set a new way of thinking of what we call using the Keshe Foundation (KF) knowledge for bringing peace and bringing it to mankind and to the whole planet with the what we call the reptile people or the submerged people, the fish. In the coming time and in what we have ignored about us in regards to the atmosphere of this planet to the lifestyle that we have been ignorant of in this part of our lives.

K: In so many ways we wait to see if we hear from Alekz as the African representation of the EC and if he is in the background. Please promote him to speak on behalf of the African nations, and making Africa one continent. Do you see him on the line this morning?

Rick (R): I don't see him yet.

K: he will try to join us today. He is in Nigeria and he sent a text that he would try to be with us; they have some communication problems in Nigeria. Someone asked what we are going to do about this. This will be a pattern of life from now on as we are expanding into the Universal Community. All members of the board as the core team, the Universal Council (UC) and the EC, we see the earth has become a small place for humanity and we expand into space. Not everyone will be reachable at all times. This is the beauty of the new technology.

K: on the other hand we have announced the start of the spaceship program with the group we call the Mozhans. We are negotiating with two governments and should know more in the next week or two weeks. We will see which position will be more advantageous for mass teaching within the structure and we will announce where the Mozhans will attend. This is just a political, diplomatic move that is out of the hands of the KF. You have to realize that by training the Mozhans into space technology they

come in the direction that there are more or less no orders and some governments will have a problem with this.

K: National orders are more or less eliminated with space technology and this creates a lot of problems for their leaders. Hopefully in the next week or so we will complete this transition time and we gather the Mozhans in one place to teach them. We have to understand that the next 3 months of teaching when they arrive becomes the ethos of the future teachings, exactly as we did with the spaceship institute teachings which I did has become the basis of the teaching for the students in the science part of the spaceship institute teaching.

K: the whole process needs the understanding that we can achieve collaboration with the governments. I have a very good idea about the site. I visited a test site recently and for us it is time to prepare and to announce the position. Maybe we will do one half in one nation and one half in another nation. We have to see how it plays out in the next couple of weeks. We said we would bring this in 2016.

K: the process of the teaching is very rapid and very comprehensive. We have achieved the support of governments in this process and this has been a big move for governments to understand. There is a need for unconditional collaboration in the new space era. The spaceship technology should bring mankind together and in that process it should show and set a pattern with the support of the EC and how they want to see it developed.

K: the EC becomes the peacemaker for the rest of humanity and how the new spaceship technology has to be used by all the nations so we have to set the standards. This is what we expect. In a way as we have done and shown in the Ghana conference we brought science and military to the same table. They understood that the military become part of the spreading of the new technology and are part of it. This is the fantastic part of the whole operation. The military sees a new line of action for them. They understand very clearly, especially the people of the air forces see how crucial a part they will play in the spread of the knowledge. They become the front of the space technology and for the military. At the same time the other parts of the military are realizing what a crucial game they have to play.

K: this is the job of the EC to bring the armies to become the armies of peace and spreading the knowledge and bring the comfort for that. At this moment

in time we have to understand where the space technology is going. Yesterday in the teachings with the doctors I explained something very simple. The innovation center has been informed of the development and they start playing with it. But as we promised we are pushing for the spaceship and the space lift. Next week we hope to be able to show you a new dimension of what we call the physical tangibility of the spaceship. We try to find out that you can ask questions once the system is running on how it is and the way it is.

K: you can feel or at least be able to talk to the people who have developed what I call the plasma cap or the first plasma stage of the spaceship. On the other hand as we go back to the beginning of the teachings we have to realize a lot of things. Every 'cap' will bring us where we want to be. If you go back to the very beginning of the teachings before the teaching started and the first time most of you came across the words, *keshetechnology.com*. If you remember, and it is still on the internet somewhere, there was a coca cola bottle. A lot of people looked for energy out of the coca cola bottle and the energy from the bottle was never understood fully by those who looked for it.

K: if you go back to the beginning of the teaching of how everybody was looking for this 'Keshe secret liquid' or this plasma liquid it is what you all know now is caustic. The whole commotion was on how it creates energy and how it creates nano material. As we said in most of the teachings this integration of the screw top lid and of the plastic was the target. (17.11 minutes) Because in the screw end of the coca cola bottle if you remember the cap end of the bottle has specific characteristics that when you put the electrodes and the caustic in due to the current which the electrodes were extracting they allowed the creation of the condition that only the most of what we call the atomic structure of this part because of the specific condition of certain bottles could disintegrate to open up and in a way it released what we were looking for as atomic hydrogen. 18.12 minutes

K: in many of the teachings I explained when man understands the use and is able to create tritium then man will be able to gather the full knowledge to go into space. Today we are going to teach you how to create and produce and use tritium. First of all you have to understand what it means to have tritium in your hands. Tritium in nuclear reactors is the curse of the technology because of the radiation which is created. Tritium as a gas plasma is a gift to the universe and it depends on how you handle and play

with it. There is a difference between the 3 atoms of hydrogen and what I call tritium.

K: you can change combination of H3 into tritium if you understand the process. One of the reasons KF was called a terrorist organization by the Belgium government was because they could not understand how easily we were creating nano materials. They said we were using radiation and plutonium and that was because of the presence of tritium. Tritium releases huge amounts of energy and this is why we got involved with Tepco. We showed them how to convert tritium into gold and then we showed them how monatomic gold is the structure of the rate of the cola bottle.

K: yes, we produce field strength at the gamma level which is not harmful to man because it is a plasmatic condition through the lid of the coca cola bottle. We are experts and as a nuclear physicist I know how to 'hide my game' and a lot of you found it. The US, Russian, and Chinese governments have spend billions trying to achieve atomic hydrogen to use for the atomic bombs. To use for 'advancement' or whatever was the clandestine activities that you have seen. But no one up until now ever considered the production of the tritium.

K: the compression on certain plastics of certain products allows the creation of tritium. It is very strange. The way the CH (carbon-hydrogen) bond of the plastic works allows you these things. If you are a chemist you understand. Since I was trained totally by my masters in the nuclear university to understand the depth of the application of interaction of the inner sanctums of an atom that is why I am a nuclear physicist. For that reason I looked into the depth of how I can have what is the essence of the creation which is a neutron and free it to use and hide in a magic show.

K: in line with the production of the release of the disintegration of the plastic I will create tritium but in a plasmatic condition. If you go back to some of the recordings of the KF, I explained this very, very clearly. When you have the coca cola bottle, and some of you followed it and made pipes, and I gathered and showed the students how to collect tritium. But I called it hydrogen where the electrodes are here to attract it (23.20 minutes) and pull the produced tritium up to where it should be.

K: the content of the hydrogen hides amongst the first tank and then develops to the higher tank. The reason we use tritium as energy and a

source of energy for space technology is the way the tritium comes to exist. It is the extension of the knowledge to understand as we say in Farsi *whoever has a mustache is not your uncle*. Because most of the men in Iran have a mustache so 'half of the nation is your uncle.' It is the same with the understanding of the man. Ask yourself simple physical questions. Ask and understand the process of the production of the elements as we have spoken about before.

K: oxygen, because it is an oxygen, is the same across the planet. Each plant and each vegetation creates and releases oxygen of different strengths according to its structure even though we call them all 'oxygen.' When you have oxygen like CO₂ it means to 'equal in strength' oxygens have managed to interlink using the carbon as an inter-connector like CO₂. When you have a hydrogen, H₃ tritium, now you have a plasma in the matter state before it becomes tritium or before it becomes the plasma of the tritium, the same composition. These 3 hydrogen molecules off one element are not all the same even though they are all hydrogen. One has the slight strength connection with the other. Now say that molecule 1 has a very slight connection with molecule 2. And the molecule 2 has a very slightly different connection with molecule 3. And molecule 3 has a slightly different connection with molecule 1. (26.34 minutes) So now you see that the 3 hydrogen molecules are not copies of each other. They all something slightly in common with each other so that the structure allows the fulfillment of the totality (of the H₃).

K: so if you understand this the next step becomes easy. Now you have a common denominator, an energy balance between the 3, but you have 3 objects, 3 entities in the strength. One of them is the common denominator. One of the 3 is free and that common denominator because of the structure of hydrogen can only be one thing—the neutron in that element. Now you can see the game play. Now you understand how you can play and convert atomic structure, molecular structure hydrogen into the gans and the plasma of the hydrogen. Now what you have in reality is something very amazing. In so many ways what you get is this: (28.43 minutes) 3 separate molecules. If you go back to all the teachings you have the infinity loop among the 3 molecules.

K: If you understand this you understand the key to the operation of your system, your flight system and how to energize, position it and travel and carry information. You have to set your system the same way. Now I

explained to you in a very simple way how the game has changed. The sun, the earth, and your space ship (diagram of the 3 connected by the infinity loop at 29.45 minutes). Change the Sun to another galaxy gravitational magnetic field force and change the earth to another galaxy. How you operate the fields within the plasma dictates whether you are arriving or if you are leaving.

K: now you understand why in the past few months' teachings I have referred to tritium a few times and why hydrogen is the cornerstone of any system operation in the universe. It is not so much the electron and the proton, but the strength of its neutron. And the neutron across this universe according to the condition created by the central line (30.50 minutes) principle magnetic gravitational field strength is the same across the universe in this universe. In space travel we look for this but fortunately on this planet because of its condition we can select it and we can set the gradient. There are conditions where we can see the creation of tritium hidden in the structure of the matter state where it becomes the fuel of the future.

K: so what you have is that you have a neutron, (31.39 minutes) and this neutron can split in the position of electron and proton as it needs to. So, what you have is a proton and a neutron which leads to the creation of the proton and the electron. As we all know they are all plasmatic energy packs. So what you can do is very simple: make an accumulation of any part of this and now you understand: would you like hydrogen or copper or gold? But in the plasmatic condition we don't see it as individuals, but we see it as the totality of the fields. (33.19 minutes) this is your Hydrogen 1, the Hydrogen 2 and the Hydrogen 3 (33.29 minutes for image). Somewhere over here is your copper. Somewhere near are the gold and the plutonium. The man has not found out about the other elements that exist in the higher levels.

K: what we have to understand is how to use what we always say is the matter condition physicality into the plasma condition physicality. You have all become masters in this. Most of you have literally passed this technology in such a way it's like sitting in a high speed train going through the city. You have gone so fast through it that you haven't had time to look at the scenery or to digest the information that has been available to you.

K: a lot of systems give different combinations of Hydrogen 3. In a lot of systems you have created CH₃. In fact all of you who have been around the plasma technology have produced tritium in the plasma state. I have made atomic nuclear plasma physicists out of all of you without you knowing it. And you know more than most of the PhDs who call themselves nuclear physicists. But it has come to you so naturally in the process of making it that you have not gathered that you are 'professors' of knowledge in this technology.

K: you have to understand, slow down, go back and look at what you missed. What you have gathered and now you can use, you have overlooked. (36.29 minutes) A lot of you have collected and done CO₂, CuO₂, CuO₂ and CH₃. So you speak about it naturally and show it. The students of the spaceship technology institute have been into space technology for a long time but you have to understand how to use it. You have to understand how you can manipulate this. I always said that when one touches it means the knowledge has already invited the soul of the person. One of the knowledge seekers touched and understood and the others get invited.

K: Go back in the process in the production of CH₃. Go back and ask yourself how the CH₃ came into existence and how do you produce CH₃. You use carbon in whatever form and copper. Why does CH₃ have a tint of red? Have you asked yourself? It's very simple. Remember the amino acid and you hung up the rusty nano coated iron which dripped blood. There it is (38.53 minutes). Now you see and now you understand why the CH₃ is the energy and it has the energy to feed you and give you strength. It is carbon with a hydrogen level that is in line with the amino acid and in line with iron in the strength which is the hemoglobin of the body of the man.

K: you understood the Zinc and Copper nano coated created the condition of carbon. You created a mixture and you have iron and some of the iron and a given strength with copper gives you H₃ or what I call tritium. (40.13 minutes). In fact the gans material you have is tritium hydrogen but because you use it in the matter state it looks to you as the matter state of hydrogen. As I said in all my teachings I am a magician; I am a master of science of the elements in the universe. For three years you have all been producing and you never stood still to understand. I took you across until you are ready to understand the production. Now you understand it. Now you understand the essence of the energy of the universe and running a space reactor has always been in your hands.

K: If you understand what is on the table and what is sitting here you understand you have the essence of everlasting energy, composition of elements to give you whatever you need in the universe. You remember when we spoke of COHN (amino acids), CO₂, CuO₂, ZnO₂, we always explained the connection. (42.37 minutes) Now if you put CH₃ here now you understand very clearly the connection and how you can use CH₃ as a fuel. In the teaching yesterday I explained this to the doctors and I realized nobody has understood that CH₃ is a giver; it gives energy. These guys with Oxygen (CO₂, CuO₂, CuO, and ZnO) due to the gravitational pull of Oxygen are the takers.

K: CH₃ is magnetical and the energy source. The CO₂, CuO₂, CuO and ZnO are the gravitational takers. (44.17 minutes). The other name you have chosen for magnetical is very simple; you call it acidic. You call gravitational alkaline. You call the acidic magnetical repulsion and alkaline gravitational attraction. This is why when you did the tests and mixed the CH₃ with CO₂ and you achieved a certain speed of rotation which created the positioning in the strength of the plasma you had your reactors leaking water or liquid or you lost a couple of reactors depending on how much the gravitational field inside was weaker to the magnetical which you added to it that was the CH₃. You created the shielding and the entity inside the middle core could not hold onto it. It disappeared.

K: as I said the problem with the science of the present is the choice of words for the same entity which has created mayhem in the world of science. We call it Coulombs barrier and the other name is atmosphere. We call it gravitational and the others call it alkaline. We call it magnetical and the others call it acidic. We call it entry; we call it gravitational or South Pole. We call it exit or we call it magnetical or North Pole. It is all the same but a choice of words has caused mayhem in the brain of the man to understand simple logic of the essence of the creation in the universe.

K: now if you understood and I have given you the magic fuel you have been looking for. You have different choices; you can carry on the plane again or some of you who understand this can extend the knowledge to create hydrogen in tritium condition, in the plasmatic tritium condition and then you can use this hydrogen condition as a point of attracting fields according to the strength you need from the span of the universe. For man

to understand the last sentence I will give you 1000 years. You will never understand it in 1000 years.

K: We are scratching the surface of it and when you understand the sentence you have found the key to travel in all dimensions of this universe. If you understood the explanation of the mixture the same elements of hydrogen creates the same conditions in travel in different universes you come across. This is the game; the energy in the central line of every universe again like the proton, electron and neutron of the 3 hydrogen has a common element strength. This is the key to deep space travel across universes. Blessed are those who understand it.

K: I have given you the key to space travel. I have given you the key to the desire of the man to have whatever he needs at every point in the universe as hydrogen of different strength, a part of the amino acid of the body of the man. If you understand it you will understand the totality of creation. For those who do not understand it _____. (49.38 minutes) go back to the physicality of your own existence and understand that every plant even though it gives oxygen, gives different levels of oxygen in the strength of the plasmatic value.

K: Now go in your own physicality and explain this in a deeper sense that means the amino acid which makes the layer of the kidney has a match with a part of the universe through the hydrogen and the neutron of the hydrogen. Then through your desire you can through your own body create your own transportation across the universe. Now you understand that it would take you a thousand years to even scratch the surface of this knowledge.

K: every position of the universe has a matching point in the physicality of the man if man understands it, man has conquered the universe. Then you understand *I made Man in the image of myself in every point of the universe.* That which is in me exists in the center point, the totality as the common denominator. But, the point comes of how do you contain this? How do you contain plasmatic gans of hydrogen? How do you bring it to be contained? Do you need to attach it or do you need to use it as the ignition for the others to be part of it to convert themselves into it and you make a decision of how much?

K: containment of the gans of hydrogen is the game of the universe. Those who mature to do it in a more effective way get access to the different

knowledge of the universe. According to intelligence they can see the play and the work of the universe and new doors open for them. The containment of neutron that it can release the totality of the essences of the universes is the game of the man of science of the universal community. No culture in the universe has completed it yet and even they only understood 2% of it. And still after of billions of years are in the process of unraveling it as they see more that they never understood.

K: the key to the success of the deep space is the manipulation of what you call neutrons. The plasma of the neutron is the strength because it is the neutron that dictates where to your understanding when it divides its proton will be position and its electron will be positioned in the gravitational magnetic positioning of the atom. The same is with the universe. The containment of the neutron is the game of the universe. You can produce the fields that the end product of the positioning of the fields will give you the material that you need or in its interaction with another neutron gives you the position in the universe that you want to take.

K: this is important and this is how you will find the first key for man to enter space technology in its true sense. The key is to hold on and to use the common denominator. In many literatures you speak about the hollow planet. It is correct. Because it is the plasma of the neutron that holds the center. And that is nothing but fields and it has no tangibility and as the field inside it interacts or reduces in the strength it leads to the creation of the matters in the boundary of the whole system. You have 2 choices: you can produce it and then let it contain itself or you produce it and use the knowledge you have up to now to contain it. But at the same time you lose some of it. There is a ratio of the speed of the rotation of the fields which dictates the interaction and its position.

K: understand what I said. In that process the gravitational magnetic field of the neutron in one body allows to be emitted and what it allows to absorb dictates the position and the shape of the entity in which you decide to travel or you decide to use it as a home. How do you contain? How do you contain CH₃ as a gas estate when it appears as a plasma? The only way you can contain it if you understand it is by itself. You remember the copper, the nano coated copper and the gas of the copper? A lot of you put the gas of the copper back on the nano coated copper and you get no energy. And you saw you had a problem in producing energy fields.

K: some of you do find energy because accidentally you had some CH₃ in some of your mixture. Play the same game and understand that the containment of the plasma has to be spherical and what you use to create the CH₃ if you understand it, or then allow hydrogen which is in atomic condition to become the center of its plasmatic condition the way that you put food in your mouth and it changes from the matter state to the gans state the minute it enters the body of the man. The behavior of the strength of both the magnetic and gravitational fields and now you dictate the mass.

K: the reason I teach this is that those that understand it go in one direction—the space lift and motion space positioning and the interaction and attraction of the fields in motion. The total cost is a few cents. Landing on the moon is a few seconds from this planet and you are fully protected and shielded and it's literally one G of space travel. This is the oasis. You convert the energy of it for what you need as food and the energy of it according to the link of the carbon connected to your emotion to the matter of desire. I wish gold in my hand and I hold the reactor that carries the neutron power and the other hand which is the giver will produce because it gives to satisfy the soul and it's the emotion to have the gold.

K: it's very simple; how do you produce this and how do you contain it? How do you produce atomic hydrogen which in the process due to the containment of what we spoke of like the food in the mouth of the man which is a containment of what we call the gans state? Today I am brining you in line with what the innovation center and the space technology is doing. It is time to take off and create motion and condition. Go back on the teachings where you remember you have a core and you put gans in it. (101.27 minutes) You saw the different layers and the hollow center. If you choose CH₃ in the plasmatic condition now the only thing that is left is how much neutron in the shape of plasma of hydrogen of mono atomic length and strength you want to release.

K: you have to remember that the CH₃ that you produced in what I call the strength of the magnetic field has decided the condition. What this means is very simple: the CH₃ is the mouth of the man. And the hydrogen you create inside becomes the matter that converts to the gans and adds to the total mass of the structure that you decide where it can be. You can create a pump and a tank the way I showed in a cola bottle a few minutes ago. You can go back and use the mixture material like galvanized steel as the embodiment of the core and use a nano coated rod in the middle of the

copper to produce the CH₃ which instantaneously becomes due to the choice of the CH₃ within the atomic structure of the hydrogen and you have created a plasma neutron for yourself. (1.04.04 minutes).

K: One thing you have to remember: you remember this, (drawing of the coil 1.04.23 minutes) and we always said this is the hydrogen (at the top left center of the outside coil), this is the copper down the left outside of the coil) and this is the gold (in the first inside portion of the coil on the left).

Remember one thing you missed in the whole teaching is this (the center of the coil). They all have a common denominator, the neutron. That conduct of the neutron is what is holding and what is adding to the mass. The neutron itself sits in layers in strength (1.05.01 minutes) and in that sitting in the strength in the center this is of the hydrogen connection and this is of the copper connection and this is of gold. (1.05.15 minutes) This level interaction in the strength is the creation of the motion of the plasma itself.

K: 1.05.26. You don't only have ____ (false?) neutrons which rotate the other way; you have the same with neutrons. If these layers in strength have one stronger than the other your neutron can rotate both ways. In the centuries to come when man has the knowledge to say that neutrons can move one way or another, how did Keshe know that years ago?

Understanding the concept clarifies the whole knowledge. Now for the first time I have explained to you the creation and the essence of the center of the plasma principle strength or principle point of any structure. This is how the universe holds itself together. This is how every element becomes of the other in different strength and positions in respect to the central line of the universe. Because now this structure has its own common denominator with its galaxy and its own common denominator with its universe.

K: that is why I said in all the teaching that the common denominator neutron which inevitably in the interaction of the fields with each other and friction leads to the creation of the hydrogen. It is the essence of the creation and now you understand how to control it and how to maintain it and how you add to it and take from it. Now you understand the totality or at least part of the totality as the reference point of the future of the knowledge of the man. I have taken you in the deep, deep sanctum in the knowledge of the universe. But unfortunately not many understand.

K: Those of you who are from the universal community and what I call our knowledge seekers of the universe are laughing your heads off because some

of you have been looking for this for millions of years and you thought you were experts in space travel. These teachings not only elevate the soul of the man and the knowledge of the man but they elevate the knowledge of the man of the universe and the universes. You have to understand it is very much like the alphabet. It's the same alphabet when you write the first word, or your thesis as a PhD. The alphabet is the same; it is the essence of the knowledge which is gained in the difference in the intelligence of the creature.

K: if you understand how you mix, how you adapt, how you control now you have the field of the universe. Because CH₃, amino acid is the giver and has the connection of the carbon that connects with the totality. You created it out of the condition of the amino acid. So, it is already conditioned to the connection of the energy with the man's emotion and the man's soul. Now you understand why we put hydrogen on top of the star formation. Because it is the giver and if it gives strong on the top it can absorb stronger fields from the base in the gravitational fields. Blessed are those who understand.

K: (111.15 minutes) the cornerstone of space travel is understanding of the control of the neutron or what you neutron or what I call the principal plasma which is the essence of the creation of the universe. Different portion and proportion dictates if it is going to be neutron or the universe, but the containment of the fields within both is exactly the same. Any questions?

K: How many people shall we see flying next week?

R: I could show one individual's attempt to build something but we will entertain questions first.

K: do you hear humming in the background? It is my charger and I need to charge up.

Gracie: we want to confirm with you about cancer patients who want to volunteer for the injections. Can they go to Ghana or Italy to attend the healing?

K: this process is going through its authorization phase and we need a couple more weeks to finalize it and then we will announce how it will work. We have to go through authorization that it can be done in certain. We have thousands of people who would like to receive. It has been approved for clinical trials and is going through the test phase in different countries.

Some people in Norway claimed they can do this and they caused themselves huge problems. You cannot make claims that you can cure cancer. When you make claims you must be able to support them. What we are trying to do is to go internationally through different aspects of development of the technology and we will announce in the coming time about the injections.

K: We have 2000 capsules ready for the coming time that allows us another 40 to 60 people to be able to use the injections. This is all waiting for the final phase. Those who claim they can do it and would like to do it, we know of a number of people who have used different gans materials on themselves successfully. Please be patient. We need a little more preparation so that you as people and KF are fully protected. We can make and prove our claims. IF you use the name of the KF to claim what you are doing that is your prerogative as all of you are shareholders in the KF.

K: you have to understand you have to prove these things. We are trying to clarify that others are trying to use it. Many have already benefited from this process. Just give us time; we have to organize how the VISAS are issued, and clarify that your nation allows you to leave as a medical tourist on a medical VISA.

Gracie: is it possible to use the logo?

K: no. it is very important to explain. Part of you are using gans materials, others are using different mixtures of gans successfully with cancer. The injection is different and is highly specialized and cannot be done by others. We are producing it specifically under the control of scientists and not as KF members are doing it. We are in full collaboration and every element and connection is watched by a team of top level professors. You have to understand that the injections are extremely effective. At the same time they have to be produced in the manner that is laid out by the scientists. Once we produce it any doctor can inject. The production process is important.

K: If you take CO₂ or CuO₂ water and inject yourself you can cause huge damage. There is a process and we are following it. You cannot digest it or use it because of the power that it carries. We are hoping with the Chinese government to come to a new understanding with the Chinese officials that this can be sped up. It depends on how the process of the arrangement of our visit is done to China. If we can immediately deliver the capsules and explain the process, the protocol is well documented for scientific groups to

process. It cannot be done by an individual man. As you have heard in last week's teaching we have responded positively to the invitation to the KF. Now it is in the hands of the Chinese Officials. We will transfer the full knowledge when we arrive. We have technologies that we have developed in the background that we have not released.

K: when we went to Ghana we transferred the technology for immediate use in that area. (1.22.21 minutes) I have developed a lot of technologies and applications. As they say there are *horses for courses*. Italian, American and European nations have no interest whatsoever in malaria. They do have a huge interest in selling things for malaria in those nations that have it and they can control. It makes a lot of money for the pharmaceutical companies. They have no interest in changing their finances from the third world countries regarding this disease. We have brought to Ghana and attended the conference a full solution for malaria for the scientists. It was not only to repair the damage inside the body of the man and create an environment that the malaria mosquito does not live in the environment that the man lives in.

K: it is very simple. You do not need to take malaria tablets or worry about malaria in the coming time because within the structure of the body of the man we create a condition that does not suit the malaria mosquito. You have to understand that malaria is one thing and mosquito is another. Mosquitoes are the part of the chain of the food and the evolution of the planet. We cannot spray to kill but if we do not give the environment for the malaria mosquito to lay its eggs in man or animal it has to find another environment to live in.

K: in this process we do not destroy; we accommodate the condition we are pleased with and want to live in. Those that are not pleasing find their own condition. So this is how you don't use herbicides, pesticides or anything else. Each creature finds its own position. We have a food technology and our knowledge transfer with the Chinese public for what they need will be completely done when we arrive. It is a gift for your president and your nation. Now is the time. We do not ask for finances or for you to donate. We have done our work. If you want to donate for what you need you can do. but on the other hand some of you donate knowledge, time and everything else which is possible and that has been the gift to humanity—the time to develop the technologies.

K: We will release in a short time. To set up you have to understand that as I said I will not take man into space without being fully equipped so he does not go to be abused. Our process is the same: in Ghana when you enter you enter a nation that is not equal but better than the European communities. What we saw when we went to Ghana places even better than the south of Italy, including the civilization and the advancement of the knowledge as well as the structures and everything else. We need to prepare the ground when you come to another part of the planet it is equal to where you came from if you call yourself civilized and live in Western Europe or big cities.

K: whether you come to Italy, Ghana or China as a medical tourist we will meet and greet you and give you accommodations equal to what you are used to. This takes a few more weeks and we should be there. A lot of work and preparation is getting done in the background. All it needs is the final pages and then we have to go back to Ghana to the officials and the right channels and the diplomatic corps. We don't want people to come as tourists. You go to the embassies of the nations we announce—Italy, Ghana or China, to be processed as part of the KF. That is the credibility of the knowledge and technology.

Gracie: thank you.

K: we have the knowledge, the technology, the materials and we offer it freely to the governments to test it. A lot of people are doing this in different ways and we have testimonials all over the place of people who have processed themselves using what they understand of the technology. This is a more powerful way of delivering it. We see the results and the data from the clinical trials and they show a rapid conversion and I'd love to say 'yes' but give us time. There is a lot of work going on in 2 or 3 different nations to make this possible. There is a huge problem for Italians to refuse. It is nothing but water. It is nothing but water and this is the dilemma for pharmaceuticals who cannot charge you \$150K for a chemotherapy cycle to be paid by the insurance company. They give \$45K to the doctor who allows you to go on the chemotherapy. That is why there are no charges; you respect your life and donate your life. If you say you want it, it is still free (if you cannot donate). This is how the KF works.

K: I get the knowledge of the universe passed out freely for very little, perhaps 30 cents. If you were NASA or one of these space companies they burn themselves up. The knowledge belongs to all of us and it has to be respected and it's free. But understand how you have to handle it; we don't

say we 'cure' cancer; we say that we process cancer. Cure it? We teach the doctors our process and they cure the patients. They have the title of 'doctor' and they can cure. They know more about the knowledge of the man than their bank accounts and which one has been sitting on which side.

K: Those of you who have not understood the space technology and understood everything else you went to the sea and made the gans of sea water. You bathed your wives, your children and yourselves and you drank it and now you don't have cancer. Now you are teaching other with cancers. No one, no government or authority or organization in the world can ban natural products. If they say you cannot use CO₂ then tell them to please stop breathing because they are consuming a controlled material. Or stop breathing because you are illegal drug traffickers producing CO₂. This is the beauty of this knowledge; it goes to the essence of creation and no documents can be written up. If any authority says you claim you are producing CO₂ water, you drink it and you do whatever you like, and then you (in authority) who are breathing are drug trafficking in illegal materials.

K: this technology and the way it is coming across the world is causing mayhem. Even the biggest international institutions are running into huge problems with KF. At the moment in the coming time you will understand the atomic energy authorities in Vienna has sanctioned us in respect to Europe. They implemented the sanctions in the UN and the broke the sanctions themselves. They have lost their credibility. What they preached they have gone against and they have refused to authorize the usage. So because it is a natural product the same goes with the health authorities.

K: FDA cannot control this technology because it is the pure production of natural elements that are in the universe. If they can control sugar you consume, they control salt, tea, rice, and then they can control the gans of CO₂. It is a natural occurring material. Is the rice illegal because you can make Chinese rice or is it illegal because you can use it in Thai Rice? CO₂ is a natural material; if you like you can drink it, use it for production of material or use it for space technology. The way we broke the control over the patents and the intellectual right property to control man to use it, now it shows its effect and the effectiveness of all the structures that have been put in to control was to make a few rich.

K: you saw how they ask you to certify herbal medicines so only pharmaceuticals can use them so others cannot use them in their practice.

Now we have gone beyond that. There is no herpes in the atomic structure of what you drink and you eat. Health organizations and controlling organizations have no way to legislate this control it. It is our respect for the natural laws that allows this to be in effect. Just be patient with us and let us do our job; we need a few weeks more. We have to Ghana for the national authorities.

K: We have to go to the American government because if the Americans start going to Ghana, Italy or China, then I hope very soon we can use this technology in Tehran. Then the Americans would be the illegal users of the 'drugs' (processes offered in Ghana, Italy or China) and when they come back in fully drugged with no disease it has a huge implication. At the moment it is the 'dying man' that is kicking. Be patient for a couple of weeks. We have the material for it and it's not toxic; the health systems worry if it is toxic. We have the data from one of the top 5 scientific organizations in the world. From now on the documents released by the African nations will be more valued than MIT because there is no bribery.

K: I have to information about something. All the papers we submitted and the presentation in the Ghana conference will be published as a standard scientific publication. So as we said that was the first scientific program and the papers and knowledge presented will be in the standard form of conference papers. (137.20 minutes) once the Ghanaians finish the job, then Benjamin will make the dossier for the Ghanaian conference before the Rome conference to present so others can understand it.

Ali: in one of your previous teachings you drew a diagram and showed how to make a motor less Magrav coil and 3 dots of gans. Could I share my screen? (1.38.29 minutes) So this is basically following that you said if we have a Magrav coil and in the middle of the fields if we use 3 kinds of ganses and the gans at the top can create a motor less system and the fields will rotate. You are also talking about containing hydrogen. How would the containment of hydrogen in this system? At the top I did put the hemoglobin gans, so there is CH₃ there. So I need a bit of input to understand how we can do this.

K: your problem with your cups is that they are open.

Ali: okay.

K: you have to be able to encapsulate the whole sphere, the whole plasma. Our guys in the innovation center have started this process in the past few days. We usually keep things in development until they are ready to explain

but this is so important that we cannot wait so I am teaching. You are there Ali, go back in the teachings. How do you produce hydrogen?

Ali: I use aluminum caustic to produce hydrogen, but we can use CH₃ with iron and copper.

K: in the process of using aluminum and caustic how are you going to capsule or control the caustic with the hydrogen?

Ali: there should be a rotation and in that rotation the hydrogen will go in the center and it will light up. So if we can create an initial rotation and feed hydrogen in and while it is rotating in the vacuum in the center it can stay there and continue to rotate.

K: Renen are you there in the background? Or Vernie?

K: Vernie do you have access to the pictures of the latest core that you can share? The condition of the transfer of the hydrogen, you can do directly by using the containment. (1.42.54 minutes) If you look at the structure, when you add the hydrogen in the center the gans of CH₃ becomes the containment for the hydrogen. This gans because changes the composition of the hydrogen from a gas into the gans of the hydrogen. Now the hydrogen behaves as a plasmatic condition. This is what we explained two years ago when Armen was playing with and creating huge amounts of hydrogen bubbles. I told him this was dangerous.

K: one of the molecules when it changes to atomic, then gans, then plasma of the hydrogen, the strength of the amino acid (COHN) which has the strength of the soul of the man, then this can interfere with the soul of the man. This is why it is crucial to understand the process and this is why we play with CH₃. What happens is now the center field has become the gans of the hydrogen in one single plasma, the CH₃ here converts to tritium. (1.45.30 minutes). It behaves as a plasma of tritium because it has a common denominator to pull it in. What happens? In this environment it is very simple. All you have left here is the layer of carbon in the gans state. (1.45.57 minutes). The hydrogen which comes from this tritium section of the CH₃ now becomes the 2nd layer to the first layer which is here. (1.46.14 minutes). Now you understand the lift position.

K: you have to produce enough hydrogen in the mono atomic gans (in the center) that in the strength some of it finds the earth's magnetic gravitational field strength and then lift is on the way. (1.46.44 minutes see the infinity loop). Now when you go to the hydrogen level you must get the right

rotation, the right composition of the hydrogen strength, the actual 'blue part' as we call it, and now you have the containment for this one. (1.47.16 minutes) so you achieved a Caroline core and another core at the same time and the boundary level is only on the field strength and this is what you are going to get, the two core totally plasma condition. Because the speed of the rotation comes into it, every RPM has a voltage value in the plasmatic condition. When you go to 10K you create the voltage value of that. This is all you need to do for your power production. Here is the higher order (the outer edge) and here is the lower order and the 'higher order' is magnetically high and the 'lower order' is gravitationally high (see green drawing at 1.48.20 minutes).

K: if you can tap into it you have yourself a one megawatt power unit or 10 megawatt unit depending on what your desire is. You call it earthing and that is to find out the minimum common denominator of the plasmatic gravitational fields on a gravitational strength compared to the maximum of the magnetical gravitational field. What is going in and going out, both of them, you have to find the minimum common denominator of what goes in and the highest which is coming out on the top. That is why when you mix the CH₃ with the CO₂ and you have given the speed you will find the interaction. Giving the speed creates the potential difference for the separation of the two and the creation of the center (?1.49.18 minutes).

K: that why it is important and you need high RPMs to contain it. That is why neutrons in stars are rotating at high speeds. The speed of the rotation of the system dictates in many ways its magnetic gravitational field strength because this is at the speed I am prepared to release energy. You do this in the physical term: you put water in a full container and you start spinning it. Given the speed of the rotation, some of the liquid will come out of the container; it splashes out. It is exactly the same process.

K: Now you understand the relationship and the process of how things work and you can do this. It is the easiest way. The ones on the space side have moved on further. The innovation center is just touching on it. In deep space testing I know some of the Chinese have achieved things but they don't see it. Because they don't see it, they don't understand it but they see some of the effect. By the way if Lisa (Lin from China) is on the line, is anyone online with one of the new labs open in China who can share the pictures of the new center? Is anyone from the Chinese community online who can share some pictures from the center with us?

Lin: Mr. Keshe which kind of picture do you want?

K: the new center that is opening up.

L: you mean the picture of the lab. I will ask them if they can send the picture to me. Ok, I just announced it.

K: thank you very much. I do have them and I'll try to send them to Rick. What is the 4 + 1 the Chinese group keeps sending on, could you explain that?

L: I don't know what you mean of the 4 + 1.

K: People post things and send things as 4 + 1 to us on different channels and it only comes out of China. What does it mean?

L: I can ask in Chinese as I haven't heard about it.

K: thank you very much.

R: I have the picture of the CH₃ and hydrogen core reactor that was just being discussed from Vernie.

K: wait and let me send you some more pictures and this is a nice, new development in the Chinese KF.

L: I have the picture of the new lab. (1.57.31 minutes)

K: it is a beautiful center; congratulations to all of you for what you have achieved.

L: we have already sent for the doctor program about 20 applications to Dr. Klaus and is it possible you will have the special Chinese doctor teaching for us?

K: we are trying not to do that but to bring everyone into one teaching. If the Chinese doctors want to join the main medical teaching on Weds afternoon then bring a translator and it will be the convenient because then we can learn the different applications from all the cultures. We have to do that or we will have to do the French medical, the Spanish medical. We know there are many Chinese alternative doctors to join. They can join the medical teaching and the translator will have to come in as you do most of the teachings. We need someone who can also translate to share the teachings at that time of the Chinese.

Dr.Klaus: we have a number of applications of the TCM Chinese doctors and we have looked at them. Concerning the teaching as you mentioned, we are waiting to see if we have only Chinese teaching or if we will integrate them into the medical teaching on Weds. The Chinese doctors can bring their own translators with them. We have to find the solution with the certification.

K: they have to bring their translators so we can all learn.

Dr.K: this works with the Italian doctors very well and they have a translator. They look at the translated version of the teaching and if there are questions they ask them at the next class.

K: the Chinese should do the same.

Dr. K: live translating is always a problem. Also seen from the technical point of view and we experienced this with the Italian doctors. This is a great way and it is to translate the teachings into Italian language and then the doctors meet again and go over it in their language. They read the pdf text and come with questions the next time. This is one possibility.

K: thank you. Would you like to share now Lisa?

Ruthie: I am Ruthie. (2.03.13 minutes). This is the location of the lab on the map. We have an R&D center, a production center, and this shows the production of the gans. This is the nano-coated copper workshop. This is the more nano-coating copper. (2.03.50 minutes). This is dealing with the water and they purify the water first. This is the stock house. This is the outside of the building of this new laboratory. And here is the experiment center and we have the study and communication classroom. We also have a meeting room. Then we have a gans production room. I think this is about 900 square meters in this new building.

K: thank you,

Ruthie: may I show some other things for you? Perhaps you could answer a question. This is nickel and some of the labs use nano coated nickel to produce CO₂ gans. We got a message that we should use nano coated copper to make CO₂ gans. Could you explain? Some people have the test for the balance. They see the outcome looks the same and they think it is the same.

K: you are still producing CO₂ if you use nickel and zinc plate because part of the spectrum of the isotopes of nickel will fall into the category of creating. It is not the same CO₂ that we do. So you still produce what you call the gans of CO₂ and you don't produce the same strength as the copper CO₂ gans. You can use any element and any combination of elements if the atomic mass difference is carbon and it is not just the copper. Nickel is hard for a lot of people to find and copper can be done in any household.

Ruthie: is it dangerous to drink the gans water of the nano coated nickel or the nano coated titanium with the zinc used for the CO₂ gans? You taught us that the strength of the field is different.

K: not all the hydrogens are the same; not all the oxygens are the same. You are producing the CO₂ but it's not the same strength produced with the copper. You can use aluminum and potassium to produce CO₂ also if you find the right isotopes. We don't produce the CO₂; we create the condition of the magnetic gravitational field of the plasma of the carbon. This is the difference with technology. We don't 'produce.' If the difference of the magnetic fields between the plates is copper, then you attract copper. If the strength as we have seen with Peter in Austria, if you create the gravitational field of zinc, then you produce zinc. If you don't put it in the salt, and do it in salt water you will get Zinc Oxide. If you take the salt water out and put it in plain paper as Peter did you collect the matter state because now you dictated what is in the matter state of the matter. If you can put Zinc plate and a copper nano-coated plate or any other material in a position that they are not in the salt water but in the medium of air, you will collect solid, pure carbon from the flow. It will be pure carbon and not carbon oxide. They can use nickel but the nickel with the zinc plate has some isotopes that create the gravitational magnetic field of the carbon. So your CO₂ created by nickel is not the same strength as the CO₂ created with copper and zinc.

Ruthie: I understand. Does Zinc have the same effect to use it?

K: no. One could be stronger than the other because now you are probably using the highest strength of carbon. This is the thing that we have to learn. The CO₂ produced from the nickel is probably a stronger carbon level strength in respect to the plasma. The one is stronger than the copper even though you get CO₂. Now this carbon gravitational magnetic field, because it is stronger attracts to itself most probably lower order oxygens to balance itself out to be able to stand the environment of the salt because it cannot change that. Or in some cases it might be reverse. It is in totality the gravitational magnetic of CO₂ but in different strength.

Ruthie: if people drink this gans water...?

K: okay let me tell you something else. Let's say CO₂ that you make with copper is connected to the zinc and it touches the systems in the body of the man that are connected with the neuro system. When you change it to the CO₂ from nickel, it can only apply to the heart of the neuro system that has the magnetic gravitational field strength which is the higher order so it can have a higher effect in one sense or the other. It does not touch those which are from the CO₂ of the copper because the 2 have to match.

K: You might see better results with nickel for Alzheimer's because Alzheimer's needs a higher potential zinc level. You are not using the same

zinc isotope in the same plate when you use copper or when you use nickel. Then this is what you have to learn and that is using different materials of different strengths for different diseases. You can do that. (2.14.14 minutes) It might help with Alzheimer's' but it will do nothing for emotional depression because everything has its own strength field. You can produce carbon from the materials in which you see no relevance to each other but the field strength in the center is of the hydrogen, what you call the carbon that matches the amino acids. If you get the amino acid on the top the field strength of the carbon is dictated and it is a different amino acid. They are not all the same.

Ruthie: thank you that is very clear.

K: you have to remember that now you have a selection of the CO₂ with the different materials. The colors will be slightly different.

Ruthie: thank you I think the Chinese lab learns a lot from this.

K: has Alec appeared yet?

Rick: not yet.

Paul from Togo: Hello Mr. Keshe.

There is a subject that we want to share about the Magrav. The second is about research of treatments and the third is for AIDS reports.

K: I would be interested in the Aids report. What is the position with the couple?

P: they are very well. The lady still goes very well and she didn't get any disease and doesn't go to the hospital any more. I sent the last report that we got. It was for the lady and yesterday I got a report that she is #1.

K: what do we see in the report of the lady in respect to the Aids case?

P: before she started treatment she got 12 diseases that added to the problem. When we started the treatment and according to the doctor's report is there is only one disease. First there were 17 and now there is little disease. The problem is the translator so I go to the translator to get the translating for me.

K: what were the results of 2nd doctor where you supposed to take her for independent evaluation?

P: The report we sent to you is from the 2nd doctor and not the 1st one.

K: has the Aids diminished or disappeared or is it still there?

P: the 2nd doctor for the husband the Aids is totally killed. For the lady I am saying that before we started she had 12 diseases at 5. Now according to the report is that only 3 remain. So we have gotten rid of 14 diseases.

K: is Aids one of the 3 diseases.

P: there are abbreviations and they are difficult for me to understand so I will get information what this report says.

K: what is the next thing you wanted to tell us?

P: we have made some Magrav and for the first Magrav we connected one to another Magrav we got 80% reduction in the first week and at the end of the week we got 95% reduction (in use of electricity).

K: can you show us your system please?

P: yes. (2.25.52 minutes) this is the first Magrav that we started. It has 3 capacitors for one Magrav and 3 capacitors for another Magrav. We got 95% reduction. So this one started gave us 80% reduction at first and at the end of the week we got 95% of reduction. It is very easy to make.

K: let me stop you and have you send a blueprint to webmaster. We will copy it and we will confirm it. We have seen people showing this and then they have problems with it. Send the blueprint of what you did. From now on we don't let people just come on and show what they want to show. We reference check it and see that it can be replicated. A lot of people showing these things are showing mis-wiring in different parts of the world. We check all of them. I respect what you are showing but you have to send the blueprint.

P: I have already sent this to the testimonial website.

K: we see things on the testimonials and we see this and this is very, very important for us. I want to see exactly what it is. This is for everybody. Anyone who shows a system, we double check and run a copy. If we can replicate and we see the results, then we will bring you in to show. In different parts of the world, different phase connections give these results but in fact the connection cannot be correct. Send your blueprint to webmaster and we will run a copy. A few people show this and when we check it, it doesn't happen and we find a malfunctioning in their system. We don't allow this to happen any more. You must have done this correctly to show a reduction but we would like to check it before we go public with it.

P: if I can send it to you...

K: send it to the webmaster and the webmaster will send it to the others to evaluate. We notice a lot of people are using different processes and they might do something in Youtube or facebook. You can share there but when we show in public teachings it has to be 100% correct.

P: I have some questions that were most important for us. We have used some kind of gans that we sprayed on. We used CH₃, CuO and CO₂ and we made one type of gans. We like to know about the total of these gans. I

would like enlightenment and that is why I was motivated to show you. Can I show the bottle of the gans? The color of this gans is blue.

K: what is it?

P: we used nano coated wire and sheets. I have one of the sheets here and I can show you.

K: please share. Explain to us what you are doing. What are you trying to do?

P: I take the plates and connected for the nano coating.

K: what material is the sheet made of?

P: normally it should be the zinc. The results we are getting do not confirm it is the zinc. When we use the zinc plates we got from Jacky on the same process the results are different. That is why I want to ask questions about this. When you see the gans we didn't get the composite gans out of the bottle.

K: I don't understand what you are trying to tell us. Can you make a video of this and send it to Rick so we can show it next time? Thank you.

R: shall we show the reactor that we had up that Vernie was sending the pictures to show?

K: yes, please. (2.37.34 minutes) would you like to explain this picture Vernie?

V: the bigger ball you see with the tan color has CH₃ inside and there is an inner ball that the motor on top is attached to. The little ball is connected to the motor. When the motor rotates the smaller ball will rotate. The outer ball confines the inner ball. We have aluminum foil and caustic material inside these balls that with the reactor will produce hydrogen. It produces gas and heats up; at first it wobbles but later on it has a stable rotation. That is our latest findings for this one.

K: have you done the expansion of the field detection on it?

V: not yet, we are still observing.

K: thank you very much. The process of the shielding is that you need both reactors to be in rotation and you get contra rotation and you get the gravitational field flow. What this structure is: you have the core which has gans of CH₃ (2.40.37 minutes). Inside the core you will find a very thin layer of aluminum. And then we have a second reactor around the first one that has the proposition. It has CH₃ and it has gans of aluminum but at the interface you have field of tritium and another field of tritium inside. At the moment the outside tritium is in rotation in an anti-clockwise direction. If we do this the interaction of the field strength of the outer tritium layer and

the inner tritium layer will create lift. But the speed of the rotation has to be that these to can link to interact and then the totality will create a field that will interact with the earth's gravitational magnetic field (for the infinity loop) with the neutron center of the planet. Now you have detached from the matter contact of the environment. It is a double core with the unit and a double core with the earth and interacting in position of neutral level. The earth mass is higher and ours is lower so it dictates the position. (2.43.14 minutes) you have to push these system to the limit and produce so much of the tritium or the hydrogen or the neutron that some it becomes the strength level of the matter state of the plasma of the neutron of the center of the planet and then you get the response. (2.43.34 minutes)

K: this is not inertia; it is magnetic gravitational positioning. Then you can create the position of other materials on each position of the planet and you can dictate your position to where you want to travel. Then you mix the magnetic gravitational of the plasma and of the matter state inertia and then the inertia dictates where you are going to be positioned in respect to the planet. This is what I explained to our team in Manila recently. Once you make a gans of the matter state of an island in the Philippines you will not be able to use it in the United States. If you create an inertia matter state of a given position of a destination then you will be attracted to it. That is how you travel to a destination from one point to another on the surface of this planet.

K: this is how birds track themselves back to where they were. And they land exactly to the right place on the same branch and it doesn't matter if the tree has grown another 10 feet or is still the same height and it doesn't matter what the weather is. There is a specific of formation and they take the total strength across. It is always constant because reference point is the center of the planet—the neutron strength level. Those of you who as I explained, the plasmatic condition of the gans of hydrogen and now you use the CH3 in that condition. Now understand the CH3 here in this inner layer (2.46.15 minutes). The gans material of the CH3 is not only here in the inner core in the tritium condition but now it is enforced by the contents (the yellow layer on the drawing) in the outer core.

K: I explained to the innovation center that if any of you have these cores and you can play with them you have to(garbled). You know the electro-magnetic field of the earth, a lot of you know. Then you can understand the speed of rotation you need to create in order to create lift

above or below it. A lot of you are knowledgeable in the field strength. This is the key. Now you have to mass produce. In one centimeter diameter if you put for example, 10 grams of aluminum and 5 grams of CH₃ in the other you cannot do double. It is by order of magnitude and it is very thin. So you go by order of magnitude in the size of the sphere (2.47.44 minutes drawing on the upper left) and further up in the outer core you may go 100 grams. And then 50 grams. If you look at it is 10 to the 2nd power. Sorry, it is 25. You go by order of magnitude until you find the right mass motion and the right speed of rotation and your system flies. You don't need any other elements such as copper, zinc, or whatever.

K: But you have enough experience to understand how to produce this. One of the easiest ways because this planet is made mainly of a metallic structure is something like brass gans or brass structure in caustic with CH₃². If you have the material available you have to add a certain amount of oxygen absorption from the process of the caustic and then you will find immediate lift. This is what happened in the core which we saw when people reported their cores were missing. If you understood now you concentrate on the hydrogen production and a lot of cores go missing until you find out how to control them. Don't forget you have chosen the carbon which means that you can connect it with your emotion. The whole process is more or less going to the extremes only as far as your understanding it.

K: we can place the system inside anybody's. It could be a craft, a ship, a car, and it will find its position and its place. It is very simple now that you understand. It has been in all the teachings and I referred to it a few weeks ago and some people understood and some people can see how it is done. This is the first time ever you have created a hydrogen gans which is a total plasma itself and because of its structure the neutron stays in the center because of its strength. The electron and proton dissipate to the boundary and now you achieve total neutron plasma condition. The speed of the rotation gives the strength difference in transfer and you can fly. In the more advanced systems if you understand it you can create a second ball on each one. If you can do this in the future in the position of these two (2.52.00 minutes) you dictate the positioning of the flight.

Dani from Ireland: I am coming from a housewife angle.

K: you mean you are a homemaker; it's a very important job.

D: when you were speaking about tritium I was wondering when we made our cold caustic and threw in the coca bottle neck and the aluminum foil did we partly produce tritium in a plasma state or a gans state?

K: you have produced atomic hydrogen in the gans state, not tritium. The production of the tritium comes by the encapsulation of the CH₃. In your nano materials you produce in the coca cola bottle you produce it because of the nano layer. Do you understand?

D: I will let that sink in now.

K: let me explain something very interesting. This goes back to atomic nuclear physics and you are all clever enough to understand this. We go back in to the structure of the coca cola bottle. (2.54.08 minutes-drawing of bottle on its side). This is the coca cola bottle. You have the CH₃ belt that gives it strength to do its job. You have to understand that I use copper 'parachute'. This copper itself has a spectrum of the fields and one of them is Zinc in it as well. And this is one of the isotopes in the structure. If you look at the zinc on the table it has the strength that is the same. So what you have done in the caustics here without aluminum you have a created a condition of Zinc on part and in the plasmatic condition you have CO₂. This is the creation of the carbon.

K: What attracts the carbon is a chain release of the hydrogen; some of the hydrogen are triple hydrogen or what we call tritium. When you put aluminum in you produce hydrogen that interacts with this. You have to understand the spectrum of knowledge in the full nuclear physics. When you say 'copper' it is not just copper 1 isotope. Even if it says 99.999% pure copper it means it is pure from other elements but not from the full isotope range of the copper. In that isotope range of the copper there is something that links to the zinc. In that process this becomes your electrode exactly as in your salt water. Now this creates a carbon gravitational magnetic field and this carbon gravitational magnetic field pulls the carbon from the plastic. Now you have the free hydrogen. In the atomic structure some of them add up to CH₃. Now as a _____ they are in the gans in the transformation or the pull as it tries to become CO₂ and with the lack of oxygen in the confinement it releases CH₃ or the surplus hydrogen plasma in the atomic structure of tritium. It is a very small amount but it can be used very effectively.

K: when you put aluminum foil in this coca cola bottle now you make the ratio of the hydrogen in respect to the carbon so high that it cannot become a CH₃ attachment so you have a huge amount of hydrogen plasmatic

condition traveling through a nano structure. This means they cannot be _____ to because the minute you put the caustic in the bottle you have nano coated the bottle so you are working in the total gans state condition. The minute you shake the coca cola bottle to start the process or you put the caustic in it you have nano coated it. The environment inside the bottle is totally plasmatic, absolutely plasmatic. Now your hydrogen does not behave as atomic hydrogen but it behaves as plasma and in the concentration of the flow and the ones who find themselves because they came from the plasma same strength as the common denominator then they become tritium.

K: you have to understand the full process in its entirety. And if you find out you do the coca cola with copper plates you don't get any induction or destruction of cap but you use certain materials and you see the cap structure. This is important. This is what we try to in totality because it allows us to understand everything and there is not random chance. We can dictate and we can even dictate what plastics we want to do. For example no all the plastics release CH₃ or CO₂ or tritium or some hydrogen atoms. The hydrogen released plasma in this condition always ends up in the plasmatic condition and carries the full spectrum. Even though you look at the neutron as a totality it is the ring inside the core which creates the pressure to rotate and you can dictate some of it. That is why you have to use some of the same kind of material, the same ratio transfer. You can even fly a coca cola bottle if you understand what you are doing. .

K: if you rotate it, or create the rotation of the plasma inside which can be done very easily then you will see the bottle lift up. I have seen it happening and I can explain it now. It took me years to understand it. You touch the cap with the bottle it feels like there is no attachment. It is still there on the table but when you start the process it has no weight because now it has integrated some of the strength of the plasma which is where it came from. I am sure some of you who understood this should be able to show us some lift by next week or at least the effect of the lift. Use brass to create the condition of any mixture that releases hydrogen. You will see this in zinc, iron, nickel and other elements. Understand you have to create hydrogen of the strength of the field of the planet. Remember what I keep saying: *just because the man has a mustache he is not your uncle. Just because you create atomic hydrogen inside where the tritium has the strength of the hydrogen gravitational magnetic field of the center of the planet then you have interacted and it gives you the position.*

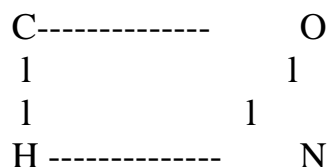

K: earth has a positioning of its central core because it came from the same sun. This is what you have to understand. If it is another material and came from another solar system and you put it here and it's the same structure as our earth it might go outside the solar system or go sit next to the sun and still have its position. This is how electrons find their positions and we find them in different layers in the stackers of the atoms of the structures in the matter state. I like the way you housewives test things in the kitchen but be careful that the pan doesn't fly.

D: we'll try, thank you.

K: thank you very much. You do not need motors to create rotation. If you understand the play between what we keep on saying of the gravitational magnetic fields forces you can create rotation of the plasma and it builds up. Take your time. Go back to the beginning videos from a couple of years ago of how the top layer gans of CO2 or whatever were rotating in the pot. We saw with Douglas how it could boil up. If you understood that and you can create rotation with it then you don't need motors. There are no motors in the universe. It is the positioning and the strength needed. Use a combination of the matter dry gans, liquid gans, nano materials and then you find out that you achieve rotation very, very easily.

K: in a way if you look at it you introduce what they call 'god particles' into it because you decide what is appearing. As they try to find their field force position they create the rotation and you can find motion without the motors. The only thing left for me to do is to spoon feed you to start your flying. But I think you have enough knowledge. If you take this knowledge a step further and you create enough atomic gravitational magnetic field mass in the center core of a tumor and you make your gravitational field slightly lower in strength than the tumor matter, you can empty the tumor in no time. And that is all you need to do—hydrogen gans. You need to take any disease with man, any disease in any way, shape or form except for viruses, ANY DISEASE with man, has a table of 4 legs. You just need to take one leg off and the table breaks up and the disease disappears. Understand this and this is for our doctors. If you understand this (3.06.08 minutes):

COHN:

These are the corners of the 'table' of any disease of man, and you can take one of the legs of the table out and 'table' will fall because the protein to support that 'table' (disease) doesn't exist.

K: the easiest one is Hydrogen. This is why when we say you can cure cancer in seconds in time when you understand the process that is all it is. You create the gravitational magnetic field of the gans of the protein which has created the cell of the cancer and now you take the 'leg' off and there is nothing there. All of them have the same strength and that is why they became part of the structure. That is why you will understand in the near time that diseases that are amino acid based will not exist be it Alzheimer's or cancer. This is not because we claim that we can cure any cancer it is understanding the knowledge of what we have developed and what interaction it creates. And hydrogen is the lightest one to produce. You can do the same with a 'table' (condition) where one of the 'legs' is missing and it is usually hydrogen of a given strength. Add that leg and support it. It goes back and finds its position in the DNA and the genetic reformation is obvious. 3.08.17

K: the technology of the health of the man now has to go into the understanding that the plasma strength of the total energy spectrum of the hydrogen, carbon and nitrogen. Don't forget for that amino acid to be created all the neutrons should have had the common denominator strength in gravitational or magnetical. That is why they are together and that is why they became the cell of the skin or the skin of the kidney. This is what the health knowledge seekers have to understand. When we say that you can eradicate cancer or diseases, now that you understand the process of hydrogen is to understand the totality of the knowledge and you are getting there. And if you look at it make the leg of the hydrogen another planet or another star formation in the galaxy. Would you like to build it, add to it, which means you attract yourself to it to add to it because it sees you as an addition, or you want to be off it to a different one that pushes you back to a position where you want to be on another planet or galaxy or whatever?

K: change the understanding of the meaning and the rest is very easy. I asked the doctors at the teaching to join today and I hope you understand what needs to be done. You can support understanding the knowledge. I explained this in the discussion in the Africa conference. Many of the scientists there were nuclear physicists and in the nuclear industry. The problem with them was that they are nuclear and they forget that 50 years ago they were called atomic. They learned a little more and now they were

called nuclear and now we have gone a little crazy and gone inside the nucleus structure which is a plasma. They are happy with this and now they become the new generation of scientists of atomic nuclear plasma physicists. This is the evolution of the science and now we work with the plasma. Understanding the work of the plasma we understand the operation of the mass which is the magnetic gravitational field strength. (3.11.32 minutes)

K: And then each one has its own strength and you have birds with birds and wolves with wolves and everything else with each other. The same applies with the strength of the propulsion of the gravitational magnetic field. Now as I said we don't teach, now we are going more in depth. The teaching is finished and the understanding the application is what we do. Those of you who understood the teaching today, cut out the bits which has nothing to do with the Universal council call section. Cut out the teaching part and listen to the teaching of the plasma and what we did in the first section. Within hours many of you will understand and start showing lift and motion.

K: but you have to understand that you have a problem. Your aluminum came or your CH₃ is from this part. You created a hydrogen in the condition which is the matter and the aluminum was folded and rolled and it came from South America. And you want to fly in New York or the Philippines? God help you. Do you understand, Vernie? Do you understand the implication of it?

K: any other questions?

R: we have some viewers including Heather Bryant and Colleen black and several more with their hands up.

Jamal from Iraq: the question is that one of your teachings you said something about the flying saucers and one is solid and goes to the light speed and one is invisible. So they are different levels. With your teaching and what we are learning which level are we learning?

K: it depends on what you want.

J: I want to go to space.

K: Yes, you go to space but you have to understand the interaction of different hydrogen strength which is the source of your shielding. There is a spectrum of the hydrogen in neutron strength. Different hydrogens have different neutron strength center in concentration of one or the other in different levels. You can create your own shielding.

J: is it close to solid state?

K: if you want to, yes. Hopefully we will show you this in the next few weeks. We will show you the soft touch next week. One of the researchers is trying to develop something more with it. I have seen some people setting up different structures in respect to combination of different positions of Magrav coils and they are achieving some and they don't understand it because they use a confined space. 3.17.16

Heather Bryant has a chart she has done on the Magrav comparisons and she asks if this is how we control the neutron.

H: I was looking at the diagram you were drawing and some things are trying to come together in my mind. The subject of the neutron being the common denominator creates whatever we want to create. Then there is the concept of being in a neutral space and non-judgment and non-duality myself. How would we start with that neutral neutron and direct it to what we want to create? I am aware that universal that may not be my job to direct how things are being made. But if I can be in a neutral state I can bring forth the template I want to create if the information comes together to create that. (Emotional Magrav chart by Heather at 3.19.26 minutes).

K: I tell you what to do. Take the right hand picture, the blue one and superimpose it on the orange one on the left. Then you find a certain point the field strengths are exactly the same depending on the openness of this diagram you have made. You will find that is the position when the entity manifests itself as the matter state of that element. You see you have separated them. To produce something you have to bring these together because that is the reality. This is the separation. Take the screen shot and cut out the orange one and superimpose the blue on the orange. Then you will see that at one point in one area these match. And then you find the strength of the matter state.

K: you will have to make it transparent and then superimpose it. Somewhere they are in balance and the gravitational and the magnetical are somewhat the same strength. That is the matter state strength of the field of the environment. Because where you made it black it has a field strength and it dictates the compression. You are looking at it one dimensionally. Now look at the black background as another field which has allowed these two fields to exist within, if you change that environment then the gap between the spirals will change. You will find the gravitational magnetic field and if it is giving more or taking more then it dictates if you can see the matter and your magnetic gravitational field strength. So you are 'visible' and 'invisible' if you change yours. This is why when you go to space you

don't lose the man as all, you lose a part of it as the body of the man is made of the gans state so it evolves into the strength of the fields in totality of the matter that you come to.

K: it is very much you cannot make a condition that is half unless you go into a condition where there is a boundary with two different fields. You are still in 'part.' Let's say in one part from your chest up it is a different strength than the bottom part it doesn't mean that the top part is destroyed. It is still there but it manifests itself in that strength because it revolves in the strength field of all the elements inside of it. You might see your top half pinkish and your bottom half greenish. Or, you may not be able to see it at all, but you are still there because that part has revolved. How they connect to each other is through a central mass of the neutron to stay intact. What you are thinking matters.

H: as I am in that neutral state that encompasses all these different things, I can dictate where to go from there by utilizing some of these principles.

K: you can use all of it, why not? I saw a beautiful thing you made yesterday in the doctors' teaching. If you understand this and amalgamate this with that you will understand and achieve a lot because you can dictate the spiral through the ganses but with the spacing of them and the different mixtures. Now if you understood what you saw with the hydrogen today and how you can create it, you will find the position of the different hydrogen will give you the structure of what you want to take or give into an element of the body of the man.

H: I'll have to think on this.

K: Let's see next week with the new empty pipes and you might be able to do a lot of things. Don't forget you have to nano coat your pipes.

H: I do, I soak them in caustic before I start playing with them.

K: no problem. Thank you.

H: does it make a difference if the pipes are silicone or vinyl?

K: no, because if all the pipes are all the same you get the same effects. If they are different then you have to find out the strength of what is allowed to come out.

H: I thought silicone might work better with the plasma.

K: it just depends what you are using it for and what field you allow to come out and what you are absorbing. The way you do the pipes with the 3, you have to understand the one on either side, depending on how you loaded it is the entry of the field into that and the one on the other side, the third one is the exit or the entry of the next zone. And if you can link the zones together

because you had two zones on the same platform, so you have if you are giving from one, are you taking from the other. And how the space between the two sets or the three sets are to receive or to give. But now you are working with the tubal gravitational magnetic field that I showed yesterday. You are going very much in the right direction and now it is tuning, refining and understanding everything matters and you cannot ignore it just because it is there. What you do in the matter state affects the condition of the plasma because it creates not only the absorption of itself but the positioning as well.

H: yes. A lot of new concepts.

K: I enjoyed your creation you showed us and it's very interesting. I understand the way you put your tubes, one becomes gravitational and one becomes magnetical in respect to the environment and the next set. Thank you very much. Shall we call it a day?

R: any other questions please hold over next week. If you have a presentation, put together a pdf and send it in so we can view it beforehand.

K: if you have done any tests on any aspects and you have seen changes, go to the testimonials and post it in there. We have now put two people to collect all the testimonials from across the internet in different languages, places and applications and we try to centralize. The whole structure is that this was the wish of one the participants last week from the Earth Council that we can bring everything together. We organize this and put people in from the KF group to gather these and the knowledge can be shared in the different languages with the testimonials. Thank you very much for today.

R: there are lots of new testimonials and lots of personal blueprint applications as well. This wraps it for today and thank you for attending the 144th Knowledge Seekers Workshop on November 3, 2016. Thank you we had a very active chat and helping each other.
