

151st Knowledge Seekers Workshop, December 22, 2016

https://www.youtube.com/watch?v=a6u3Y8WA_hQ

Mr. Keshe (K): (8.10 minutes) good morning, good day to you as usual wherever and whenever you listen to this Knowledge Seekers' Workshop. The expansion of the knowledge has no limit and in today's teaching, as we usually do on Christmas we unravel some of the secrets of creation which leads to the creation of man on this planet. There are a couple of announcements: Keshe Foundation testing stage one has been submitted and accepted that the CO₂ and gans of CO₂ are totally non-toxic materials by ingestion or injection into the body of the man. You have to understand this is the bandwidth of the spectrum that is tested by the scientific conference. We have entered the 2nd phase of testing and it has shown immediate results with cancer. We have discovered that using the gans materials, they have certain properties and certain ways to interact with the body of the man. Within a maximum of six hours total cancer cell destruction has been videotaped and we have received the report on it.

K: this development will carry on for the next couple of weeks as we had not expected to see such a performance from the gans on the cancer cells and tumors. We have entered the phase 2 with new methods of observing the destruction of what we call the cancer cells. What was expected to be a one week test in phase 2 has been completed that the total cancer cells are destroyed. This is done with the gans material. The interesting part of this report says that the gans materials destroy the cancer cells.

K: This goes with what we said previously could be done with gans materials and cancer cells. This matter is more effective than chemotherapy; it is direct and the effects are very apparent. In six hours' of observation there are no side effects on the surrounding areas. This has led the research team to take a new direction in trying to search the link to cell by cell. This started yesterday and I've been in communication with them in the past 24 hours as this is a very strong development. We can produce specific gans for specific cancer and diseases. And strangely enough we see the same performance and this means that what we have discussed in all the teachings in the past few years regarding the cancer and what we have used and the gans has released specific field strength of gravitational magnetic energy.

K: when the energy level which is built up around the cell reaches the interaction point strength of the cancer, the interactions starts (12.30 minutes) and depletes the energy from the cancer. This is now confirmed,

scientifically proven, and we have no doubt. The most important part of it is that no cancer cell changes as we have seen in all the pictures during the past week. When the strength point is reached of the cancer cells, then in one second all the cancer cells die. It is not a process that we have seen cell by cell.

K: the report shows that it performs as a threshold. The second that threshold is reached, all the cancer cells in one second die. They start the tests with a heavy amount of black spots which are the cancer cells. And nothing happens and then within several hours suddenly the whole cell changes to totally pink cell which was the total destruction (of the cancer cells). It is not a process that we have to overcome the cancer cells one by one. This shows that we have developed a technology that we can tune to cells at a given strength. It transfers energy across the cell. This has led the scientists to unusual development of the new methods in the past week to understand this more.

K: this is unknown territory that the cells in one batch literally destroyed themselves. This is what we have thought in the past years and what we have explained. If you go back to the medical teachings what we said about the strokes confirms what we said about the gaps in cancer. When your energy level in the emotion and physicality reaches a point and when that point is equal to the strength of the brain cells the whole brain switches and you have the stroke and paralysis. This research data is coming through Tokyo University and it is so fundamental to the structure of the application of the new science of space technology. This means that now we can literally understand this is detailed scientific data that is coming in and we can tune and balance the strength of any cell.

K: this allows us to understand when the cell can be produced to know what we can use to change a cell. This goes back to what we said and now we are getting scientific data that you can produce a cell with a defect in it such as a cell in the heart and we can concentrate on it on the development and destruction side and build the cell and the tissue up. This development changes a lot. I have spoken to the people who are relevant to this technology and understand it. We will start new research directly because of this understanding. What it shows is not to be able to get to the point of destroying a cancer cell, but it shows us a new insight. If we work on the magnetical side of the energy of the cell, we allow it to regenerate. If we work on the gravitational side of the cell we allow it to drain the energy.

K: when looking at the Magrav system when you control the gravitational or the magnetical it allows us to play the game. This week just coincidentally Jon in Arizona sent a video. It had to be coincidental and it is so correct. It shows what we have seen in the medical application and he shows it beautifully in the creation of the cell itself. Is Jon in the background?

Jon: I'm here.

K: could you please show the video we looked at a couple of days ago with the 2 coils with the 2 power supplies where you can change the magnetical and the gravitational. We see now the science of the medicine, the science of the space technology and energy is coming together and we have the understanding to complete the process. This is very important on the scientific level because this creates a new level directly for the team that works in the health side, creating, adjusting and understanding the cell. What this means is very simple. For example we get a biopsy of a cancer cell. We take it out and put it on the disc and we create the field strength of the gravitational until we see that it changes property from cancer to a normal cell or to a cell which is not cancerous. Then we tune all our system to that and in one instance the cancer cells throughout the body change. Then you go in seconds.

K: we said this technology was available and now we can show it is proven scientifically. The mechanical side of the structure is coming in, the scientific side of the medical side is coming in and the plasma technology is coming in and now we can so now we can do this very easily. The reverse of this is the same. We have a child or a person with a heart defect and part of the cell is not created. We can take a very small biopsy or understand the strength of it with the measuring tools and then we can concentrate on that cell because only that cell creates that strength and we can develop it. The heart is fixed. This changes a lot of things, even Malaria and we have started looking at this in Ghana. With the facilities we have here we can do something very interesting now that we have confirmed this development. We can find the threshold of malaria in the body, its parasite, and we just touch that and nothing else in the body.

K: in Tokyo we did some tests very rapidly. We put immediately on the tissue where the blood was as a different strength and we are testing the results against the blood. The results are amazing. The technology is confirmed to be correct. We told you that over time you should be able to

walk into a (medical) box with cancer and walk out of the box without cancer. It is now scientifically proven to be correct and now we have to tools for it. This goes back to Klaus and the medical team development. You have to find this working with the doctors and we have to find the frequency and the threshold band of the creation of the units. This changes the whole spectrum of medical applications world wide.

K: in the coming days we will release more and more. We are releasing the knowledge only to scientists at the governmental and university level. We are not going public with this until it is completed. It works coincidentally and we have to be targeting exactly. We lose tissues through a stroke. We have to understand and fine-tune this. Now we understand how it is. We should be able to walk many out of any disease within 3 to 6 months. The processing is important and now we have scientific data. We put scientists with some of the most leading universities in the world on the table that have done the tests. This changes the whole medical application and the whole approach to a lot of understanding. Can we now be able to energy design or reverse in a way that we can deplete energy when there is a tumor or when there is a growth?

K: Random operations and random treatments which lead to more deaths go out the window. The way our team is working we can show in January or February the full operation and report. Maybe we will submit this as an alternative side in the Philippine conference. We have found a breakthrough that confirms what we said for years. We understand now why some people use some systems and say they don't work. And, some people use the same systems and say that they worked for them perfectly. It is saturation strength dependent and you have to find the strength of the cancer. If someone has lung cancer and another has lung cancer it may work on one and not the other.

K: it means that the strength has not been achieved when it 'does not work.' Something we have not realized in the research in Tokyo is very interesting. It is that we can use CO₂ to achieve the total change in the structure of the cancer in 10 to 12 hours; we can use Zn and achieve it in 6 hours. We can use slightly heavier gravitational magnetic field strength. We can go down to calcium and achieve the same change in ½ hour to 1 hour. It depends on finding the strength connection and this is why the randomness of the process should go out of the equation. This is why some people, when they use the system for 3 hours, they don't see any change but some people use

the system for 2 hours and see the change. This is because in their system it has moved to that level. So we have initiated new research this morning in Tokyo. We know the threshold and it is very specific. We knew this and now we can put it into practice in the next 7 days.

K: it will be tested in Tokyo and one more location where we are initiating further testing. Many times I explained that when you make your CO₂, your CuO, your Zn to look at the fat on the top. Now the key is that fat because it is the amino acid. When you take the gans you take the energy in the randomness if it fits. Now the energy which matches the amino acid in the fat can be the key to the solution. It has already stated *this is my level*. So we have to find the strength of that amino acid. It shortens the search. This changes a lot of things and the way it will change is very, very interesting. It is that we take, for example, a tissue or sample of the cancer. Through the processes you have already done we produce a gans with the presence of the tissue as we did with the orange in the amino acid and in the container producing for example, the CO₂.

K: so the amino acid on top of the water has the strength that matches the cancer in the amino acid level. It is not random any more in the gans of the Zn. The amino acid that we take out has the key to what strength of gravitational magnetic field we need to produce to adjust our systems. This changes the game in the health section of the Keshe Foundation (KF). So we can use whatever is there, that amino acid, as a cream, as food and in that process we can tailor make it to overcome the cancer. These are the things that are in development. Now for the first time we see the development and scientific data that confirms it and takes ambiguity out of a lot of things.

K: we have seen a very peculiar pattern in the tests in Tokyo. It confirms again the development of the cancer reversal process in that the emotion with Zn has the same in the reversal. So the cell carries the physical structure and another structure of emotional strength. When we mix CO₂ with Zn in the lung tissue we see a different pattern. This goes back into all our teaching: in this technology we do not destroy, we convert to the level that the body is happy with. It is a processing and not a healing. The body processes itself back to the health and to the condition that the rest of the body can accept.

K: We release all this and we have released all our data to the health authorities that we are working with, to the ethical committees for further

study. This creates a huge dimension in the world of medicine. We can tailor make any medicine according to the person. Do we need drug inspector systems? Do we need to make new systems to measure gravitational magnetic fields of two systems at the same time, one being your system and one being the cancer cell? So, the breakthrough confirmation of the technology, we have in hand and we can show it. We don't see that the cells totally disappear as if they don't exist. The cells are there but they do not behave as cancer. This is very fundamental and this is what we said: *in this technology we don't destroy, we change. It is co-existence with no damage.* I thank the scientists in Tokyo University and here in Ghana who work with us in the background trying to get this data and scientists in two other universities we are operating with.

K: this changes the whole spectrum of the science. But, this opens the need for more understanding. This opens the need to understand the structure of the creation of the cell and this brings a new dimension into the application of the technology. This brings a need for better understanding. To understand this better today I open another chapter in the teachings. And this has been taught before and it has been explained before and now you see the totality. What does this mean? One of the secrets of the world of man has been his own creation. How did man become man and how did life start on this planet? What is the process of creation? Is there a God? Is there a Creator? Or is the creation of the man a natural process which the man through his own weakness has created a Creator to submit himself to a higher level of which he does not understand the totality.

K: this brings a lot of insight in what we are going to teach today in the understanding of whether the process of creation anywhere in the universe is dependent on an extra or does there need to be an additional being for it to be created. Or is it a random process and when all the randomness comes to it, releases the creation of the being depending on the environmental strength? This puts a very big question mark on existence of the Creator for man. Buddha, bless his name, understood part of it as I have said many times before, but he could not understand the totality of it.

K: the reality of the creation goes back to the very beginning of the teaching. If Jon has found it, I'd like him to show the video and then I will start explaining the creation of man on this planet, how the life starts and how the life completes and how every being on this planet and in the universe is

created. Creation does not need a creator; it is the creation of the condition that releases the creation.

Jon: I am ready. I am going to warn everyone in advance that this particular video was turned sideways halfway through. So you will have to look past that. Again it is 'raw video' and it jumps around a bit, but you will get the idea of what we are doing. What the concept is and what we are doing is showing the gravitational fields from the magnetical fields. I played around with amplifying each one to see if we were able to change the dynamics of the field size. We moved farther along than what this particular video shows.

David: we have the new prototype we are testing and here we have 6 single coils in the middle with gans ball and each one has an alkaline ball that is 13.6 and the coils are sprayed with the alkaline mister. We have the acidic mixture in the outside of the center coil. The same thing is going on in the magnetical side of the device and the inside coil is also alkaline. The outside is acidic. We now have 2 transformers as we used in the other tests. And we are connecting only one lead to the gravitational side and one lead to the magnetical side.

Jon: David you have the gravitational side so go ahead and start.

David: we will test the field on the inner coil first.

Jon: these have a power supply. How high is the field? Go slowly Julian so I can follow you.

Julian: 2 to 3 feet.

Jon: and out the other way 2 to 3 feet.

David: these fields here (35.37 minutes) are creating the bubble.

Jon: now, turn on all the magnetical fields and go ahead and bring it to 3 to 4...that's good. We have these high voltages. What happens on the outside?

Julian: it goes about 3 feet.

Jon: it's about 4 feet out. How high is it and what happens with the center field? All the way around we have this big bubble that is 4 to 5 feet around plus on top. So now let's see if we can control the outside versus the inside. Turn off the gravitational. What happens to the field now Julian? We still have the magnetic fields. Is it just as high?

Julian: it is a little lower.

Jon: but the magnetic field is putting out a pretty big field isn't it? Turn your gravitational back on. Now what happens to the fields?

Julian: it is going to 3 feet again.

Jon: so now we only have the gravitational field on and it's not quite as strong as the magnetical field as it looks. It looks to be 2 feet out rather than 3 feet out. Now leave them both on and let's see what happens with the fields.

Jon: we think that we can create an entire polarity out of these two magnetic and gravitational fields. What we are working on now is to bring them up off the ground and to re-position the direction of the coils so they return to the 90 degree way of looking at them. That's where we are.

Rick: thank you for that. I'm not sure if Mr. Keshe is there; we can't hear him.

Jon: conceptually what we did when we wired those coils is that we wired them a little bit differently than your normal coils. We wired gravitational to gravitational and magnetical to magnetical. We tried to put the additional acidic and alkaline feature to the gravitational and magnetic fields, believing that isolating them would help them achieve what we desire to achieve and that is to control the spacecraft. When we increased the gravitational we pull the spaceship down and when we increase the magnetical and amplify that we push the spaceship up. Any questions about what we are doing?

Jon: we are going to pull it off the wooden platform and having it so that we can build the field. We think it will be like a real circular bubble with the toroid field in the center. We can feel the energy coming off it. It's not overwhelming but you can still feel it.

Rick: in the central core, does it go down to zero or just decrease in the center?

Jon: in this particular case it was a bubble. But the center was higher than the outside edges. What happened in the 18 unit configuration as we have let the fields set up and get balanced within themselves, we found that the fields kind of flattened out so it is more toroid type of field. Before when we started it, it was much more of a bubble type configuration. So I think it is more of a situation where the fields get balanced and find their balance among themselves to where the toroid action takes place. That is what I am sensing from what we are seeing now.

Jon: when you first start them up you get a big bubble and as you let it sit, it starts to feed back into itself and the fields start to flatten out a bit.

Rick: that makes sense. Any other questions for Jon?

K: I am back. We have a problem in downloading. Thank you very much Jon. What is important as I listened to the conversation in the background, now you can see that we can find and go further with this development and fine tune it? We can adjust like the core inside the mixture to find if the cancer cell strength is gravitational or magnetical and how much it gives and how much it takes. This simple test changes a lot of things. In the process of explaining this to Jon, I explained to Jon that it needs to be more realistic. The more realistic is that at the moment when you look at the core and the coils, they are flat and they are touching the ground.

K: If you remember and go back to the original teachings when we showed a lot of things with magnets, we have shown that when two magnets are on the table, the distance between them is very little, maybe 2 to 3 fingers when you put them on opposite polarity. But, for example, when you turn one magnet on its side and you put the other magnet in the air, the gap increases by 3 to 4 times more. When you hang magnets in the air and let them swing against each other, you will see the expansion of the field. So we have asked Jon if he would take it a step further and to lift these coils off the ground where the magnetical is put in a pipe and it holds and the rest are free. And it only touches on two points of the magnetical ring.

K: now we should see an expansion in the field strength. This is what we need in the atomic molecular structure of the cancer or anything else. So we are becoming more and more to the dimension of the real condition where the cores like the star formation hang in the air. But this time we don't create rotation as we said in the teachings. The RPM in the motors can change the voltage and the potential difference. So, this way we don't need high speed rotation;

K: Jon can control the gravitational and magnetical and moved the power unit inside of the system instead of outside of the system. And, then we become a more realistic operation. This is part of the flight system. But at the same time it applies to the health application and this is what we said in talks with Klaus and the medical side. You can tune the gravitational and magnetical of each core; this is the first time we have seen this. So this opens a new horizon in the life and operation of the technology.

K: are there any questions that we can answer relevant to what we are talking about? Otherwise we go in the process of what we said about the

creation of life on this planet or in the universe and then you will understand more how even your blood circulation has come to be and how life starts. Some of it you heard earlier and some you heard in parts in different teachings. We bring everything together and from there we complete the body of the man and the life on this planet.

Mosfeq Rashid: question for Jon. As Jon is applying voltages how far up have you gone in terms of what voltage at the transformer?

Jon: these 2 power supplies that we use only go up to 3 volts. But the transformers go up to 70,000 volts; or to 7000. They amplify the fields. If I just put on the power supply themselves we wouldn't see much.

Mosef: is it 70,000 or 7000?

Jon: it's 70,000. You can find those and they are not very expensive. You can buy them on EBay for \$7 or \$8.

K: it has to be mentioned that these transformers are pulse transformers and they are not continuous. They create a pulse voltage up to 70,000. But the most important this is that maybe some of you have missed the point. When one unit is at 3 volts or no voltage and when is at 70,000 you see the expansion. At one point we switch off the power supply so now it pulses in only one branch. In the other point, they change it. This is exactly how the body operates and this is why we see these operations with these transformers. It is a pulsing transformer and not continuous and so it mimics the body of the man, the heartbeat and the frequency. That is why we see these behaviors. When you go to 3 volts it is very little. But when you have it on the table you still have a field.

K: in the next few sessions we will show you the new generator and you will see the expansion of the fields by 2 or 3 meters. They are very powerful and the new generators behave very much like the body of the man. They become a plasma source so we can expand the unit's power by itself and make it wireless with a very high energy, plasmatic balanced energy. As you see one thing is adding to another and the knowledge is supporting another part. We learn from one part and we can apply that to another part.

K: the field is very low which means it is at rest. If you increase high pulse or low pulse or you if you manage to tune the pulses between the two fields you will see zero shielding and zero field. When they switch one to the other and change the variation, these two transformers are not synchronized or one is slightly not the same as the other in the voltage. These things can

be explored and taken further. We can see how the change comes and how we can change gravitational to magnetical and link the magnetical to gravitational to bring balance to the cell. Any other questions?

R: there is a question from Justin: *is this related to the back EMF (electro magnetic force) as in flow in the electro magnetic system?*

K: we are going back to the same thing as we said before. There is confusion in the world of science with the use of language. We call it back flow; we call it eddy current; it's all the same. In the world of science now that you have been educated and you understand, you have to realize that there is no forward movement if there is not stronger backwards (movement) to support the forward (movement). In the present world of science when we go to Newtonian laws we say that the force has to overcome a point so that the matter can move. In the world of plasma such a thing does not exist.

K: (54.03 minutes) **in the world of plasma if you re-define it, you have to receive more to be able to give.** Newtonian law looks at the solid matter state. Plasma law looks at the reality of the interaction. This is where a lot of people get confused in trying to understand the plasma technology. Electromagnetic fields and current flows---in a way we use the same terminology for the same thing such as backflow, eddy current, gravitational field. They have the same meaning and the same terminology. The confusion in the world of science is from the use of the language and it creates confusion in the understanding of the science. Back flow, eddy current—it's what has to come back much stronger to allow you to control it.

K: there is no confusion and now we understand this; we know you call it electro magnetic flow. For us to be able to go forward as we see in plasma we need to be able to receive in order to give. So back flow and eddy current are the same. That is why we see the measurement of back flow currents in electrical systems. Professor Myers called it scalar waves and his argument was that his system was better than Tesla because Tesla could not pass the Farady cage and Myers' system could pass the Farady cage. (55.59 minutes). Tesla gives; giving is weaker and receiving pushes through. I admire both the scientists: Tesla and Myers and they talk about back flow. Call it eddy flow; it's the same and that is why it goes through the Farady cage. It means to come in and to be able to give. I had the pleasure of meeting Professor Myers several times. When you speak with him he is blinded to the fact that he is talking about the same thing.

K: Without Tesla's forward there is no Myers' backwards. It needs Tesla to push forward for Myers to receive his scalar waves. And this as a scientist, he was blind to it although I explained it to him many times. You call it eddy current or whatever you like. This is the process we have to understand and then whenever we see a condition we have to determine if it is coming to us or going away from us. If it is going away from us it means it is the weaker strength. If it is coming to us it is the stronger strength. We have to find the weaker side. If it is going away it is weaker so I have to find what strength will bring it back in that allows it to go back to its strength.

K: The creation of this planet exists on this; the creation of every cell on this planet works on this. Due to the time as a race, we have chosen different ways to understand different parts of the science by creating different names for it but in principle the whole thing is the same. If you understand in the cancer cell how much is needed and why they saw the threshold, we have to wait 6 hours specifically with a specific gans to see the specific cancer cells to change. They aren't destroyed; I wish I could show you the pictures. It is absolutely amazing what we see. We have to find the switching point when the field changes from magnetical to gravitational and what it does become when it becomes gravitational. Why does it become stronger?

K: This is what I said about the banana. Once you get past the skin of the banana the stronger part of the banana appears. It is the same... get a banana and peel it. The skin is the magnetical and it's weaker in whatever strength it is supposed to give. But as the center appears it is stronger. But one is needed for the other to manifest itself. The skin cannot exist without the banana inside and the banana cannot exist without the skin on the outside. Every fruit has this balance. That is why you have the skin on any fruit; the skin is the feedback and the gravitational and the center is magnetical. Then it is vice versa and in another layer the skin becomes magnetical and the center becomes gravitational.

K: this is what confusion was created when we explained the first Magrav coils. I explained this last week. You have to understand that for a cycle of life, which means the repetition and holding on to, needs a process where one strength matches another. If you go back to the teaching, the very early teachings, when we put two magnets on the table, why do they move? What is the distance? The distance at somewhere in the center is where the

magnetical of the stronger loses enough energy that it becomes the gravitational of the weaker. And then on the other hand, the magnetical of the weaker in traveling reaching a point that it has enough energy that it matches the stronger. This is where we see both gravitational and magnetical exist on 4 lines. They co-exist; it's the way it is. Even as a field is moving, the pull from the weaker side to go to the stronger is absorbing energy on its gravitational skin.

K: That is why the magnetical moves and when it reaches a point it becomes the matching of the weaker side of the gravitational pull of the stronger. Without it, life does not exist. Without it no star or earth can position itself in respect to the sun. We look at 4 gravitational magnetic fields but the reality of the operation is that there are 8 of them. Each one at the same time as it is moving out to a new destination, as it gives it is taking and its taking is giving to find its balance. So, when we show the magnetical field from the exit point of a magnet or a planet, it is not just that the magnetical is going, you have to see what the skin is absorbing so that it increases the other field and it goes further and becomes balanced at the point of the strength of the gravitational field of the destination system.

K: this is how we deplete energy from cancers in the core system. These are what we have to understand. The teaching is complete; understanding is the next step and that is understanding what is created and what needs to be created. In so many ways we go back to the origin of the teaching, to the very original teachings. Go back to when we said that we have the sun, the earth and we have in this process creation of the fields (1.03.49) where the position is dictated. The distance is confirmed. And this layer is not just one, but you have the magnetical the same as the gravitational leaning against each other where there are 8 field forces existing and we only consider the one that is forwarding to the other. But the other exists because the field force cannot operate in it.

K: in a way when you look at it, when you drill a hole into wood you find your way to go through. But you have the chip pieces that come out of the matter state and create the dust. In the world of the gravitational magnetic fields, these dusts are gathered by the back line which by collecting it, it increases the strength at the point of inception of the interaction of the fields it reaches the balance of the other. But, because we don't see it we never consider it. In the matter state we collect the dust; in the plasma state the gravitational field strength which the magnetical is coming out of is

collecting the energy and that is why it increases itself. That is why it is feeding back to it; at a point when one reaches the gravitational of the other, the balance is created. This is what has never been understood and I will keep repeating it until one day somebody understands. (1.05.36 minutes)

K: there is no wastage and no leftovers. Someone will come and collect the dust. This system because it is created out of itself, absorbs residue and makes it to become part of the gravitational. Look at the Alecz beads and look at the gravitational magnetic coils. We have repeated the same thing. The feedback is the collection of the residues. In the matter state we drill it and we throw it away. We cut through a mountain and we have a hold to go forward but we discard the stone that comes out of the tunnel. In the world of plasma because all of this is created of the same self, and go back to the teachings where we said the plasma is both gravitational and magnetical. (1.06.27 minutes). So as one loses the other one gains because it has somewhere in part of its spectrum what the other one is releasing.

K: this is how the world of science works and how the world of plasma works. And up till now and every time we teach it is has been discarded. We always look at what we gain and how far we go. We cannot go any further if we don't collect what we have destroyed. And part of it, we take energy of the other. If you take all the dust and put it back in the tunnel, now the tunnel is made. Now there is more of it for the gravitational to feed. This is what I keep on saying: we need to understand more in depth and then the understanding of the science of creation becomes a pleasure.

K: we always say in our teachings that when the field forces of the planet and the sun interact at the point of interaction you create what you call the matters of the planet—nitrogen, oxygen, carbon, hydrogen, helium. A huge amount of helium is produced in the upper atmosphere but through the centralization and the compression of the magnetic gravitational fields of the vacuum or lesser strength, it converts itself to the field strength of hydrogen and energy for the production of oxygen or carbon, or nitrogen as the centralizer releases the energy needed. What happens? Now we understand for the first time of the teaching of the past that the life of the man, starts in what we call the gaseous part of the planet.

K: What is important is that this gaseous part itself radiates and receives. It is created out of the inner structure but this inner structure has a field and matter state. The same process as what we see in the interaction of the fields

of the two field forces of the earth and the sun now appears and takes place between the plasmatic fields of the earth and the materials which are created. This leads to the creation of what we call the gaseous part, the interaction of the fields with each other which is called the amino acid.

K: Now as we said many times before the physical part itself has different structures. (1.10.30 minutes) one is the solid outer part and one is the liquid part that we see as the waters of the oceans and the sea. When this gaseous creation, the amino acid, interacts with the solid part, a new kind of life is created which is blind to the science of man. In the future we will explain this. In the interaction of the gaseous part, the amino acid with the water part, we see the creation of new interactions, a co-existence, a co-interaction, a co-partnership or whatever you want to call this, takes place. Now we have the amino acid and now we have the water which itself has the possibility of creation of weakening or creating a field strength of the system. (1.12.11 minutes).

K: so, we have the amino acid and now it enters the liquid of the water and now it is not in the free space of the gas motion but in the thicker interaction of the water structure of the gravitational magnetic. You have to remember a very fundamental, important note and that is that the water on the surface of the planet manifests and behaves itself as matter state in respect to the gravitational magnetic field of the atmosphere. But in reality because it is in the plasmatic condition of the solar system, it still behaves in the gans state in respect to the strength of the solar system gravitational magnetic field.

K: So, if you understand this you will realize one fundamental point—the waters in the oceans and seas in certain parts and most of the parts are exactly in the CO₂ box of the universe or, the CO₂ box of the planet. Where the water exists in the solid part it has created matters for itself and in the liquid part is soluble like sodium. So now the salt of the sea in the presence of the water gives you the condition of your CO₂ box. You have a gans pot and you call it the oceans and seas. You have seen how you can produce different gans in a pot depending on what elements you have inserted inside the pot.

K: with the rains and the storms and washing of the sand and solid matter states, the rubbing of stones on top of each other, the rubbing of gold, silver, iron and copper rolling down through rain become dust. This pot has millions and billions and trillions of particles. Now you have seen that you

have the salt, and you see the amino acid and the matter state in nano state gans particles. So let's say you add Zn to it. Now in another part the same thing comes and you add copper to it. Two that are similar to each other means that it is easy to make the link. Now you have amino acid of the Zn and of the Cu and the two entities entangle so the life becomes in conjunction.

K: Somewhere the amino acid of interaction with the salt water with the addition of what we had, the sodium with the iron leads to the creation of what you call hemoglobin. In a magnetical condition to the earth gravitational magnetic field the only entity which in the solid state of the gravitational field strength of the earth creates levitation. So in the interaction of the two, the Zn and the Cu you find yourself in the circulation of the flow of the fields of what you call hemoglobin or blood. Because you have to understand if you look at the top of your gans boxes, the protein is flat. In the interaction and creation of the field of the plasma of the hemoglobin it becomes encircled. Now you have what you see as the Zn and you see the Cu. And this is how blood vessels are created in the body of the man. That is why blood flows in the body of the man.

K: Due to its gravitational field forces in balance of this planet to find it keeps its levitation in respect to the other fields. And once it is created it is self sustaining and it means you can take man anywhere in the universe. It is inside the cell of the structure of the human being and its gravitational magnetic field strength. That is why when you bleed it comes out of this environment as solid because it is of different strength. Now you understand that it is the adding of different strength fields is what makes heart tissue, lung tissue, brain cells. It depends on the ration of it and it depends on the salinity of the salt. It depends on which kind of salt exists and now the game of life starts. The question is, if you understood this, is there a Creator? Or is it the weakness of the man in his own creation that has brought into their minds the creating of the God?

K: *I made man in the image of myself. If my image is strong it reflects the man as strong.* Where did the Creator come to it? Did he come and measure how much oxygen there would be in the atmosphere, or how much nitrogen or how much when a field created? Is the 'Creator' the limitation of the understanding of the man of his own creation?

K: the reason I teach this way is because when man understands the truth then in the depth of space he cannot be abused because he understands. The mutation of his understanding is the cause of his development. Then the man does not believe in fallacies because he can analyze and he can understand the condition. When someone tells you in deep space *I am 'this' or 'that'*, you analyze how is this guy created? Can I repeat it? If I can repeat it and understand his way, he is not the Creator. It is my weakness that allows him to be. There is no abuser unless you allow the abuse. Religions are abuse of the man's weakness of his own understanding of his own creation.

K: in one page I have explained the whole process of creation from fields to man. Is there a Creator? This page is the history of man on this planet. This is the history of creation on this planet and it replicates itself anywhere in the universe. Now you have to go back to what Jon showed. Adjust some fields; create different dimensions of different strengths and then you will find the gravitational magnetic field point absorption of the crumbs that becomes the liver storing the leftovers and creating fields inside it in order to be balanced equal to calcium, sodium or whatever else. The liver is the storage and the warehouse. You create a system that those in the past that were too weak needed to be extracted. You call them kidneys.

K: As you take solid matter, at this point you need to be able to extract at the conversion to be able if you block it then there will be nothing more coming in because life finds its balance. You have created the large intestine and it's another disposable. You have stored energy in its operation. You created a computer center by strength of its magnetic gravitational field of salt of different strength and salinity. You created the computer which is the brain of the man. Then you have divided the control in a way that it can be centrally computerized in stations that can do their operation and report now and then to the headquarters—you call this the glands.

K: you need to use and feed to run this operation through the magnetic gravitational fields as you call it the current flow system, your wiring. To do the matter state of it you call it blood. To do with the emotional which has to do with the central emotional communication system, you call it the neural system. You need to be able to have the system be mobile so that it can have access to plenty and regenerate as much as it likes and you call it legs and arms. There is nothing to the body of the man – it is a mechanical system that has seen how to adapt itself to its creation.

K: you change the gravitational magnetic field of one of the parameters of the body of the man and you can get man to live anywhere in the universe still with the emotion of the man but with the physicality of the destination. But the whole system needs concentration so that the physicality and the emotion which is the control system are operated and receive the same amount and we call this the soul of the man. This is the central energy for both the emotion and the physicality. So is there a Creator? Does the man have to be fooled with the cross? Does the man need to be fooled with the Star of David, the moon or with any other symbol to confirm his own weakness of the understanding of his own creation?

K: For man to become strong enough for what is learned in the depth of space he shall not be abused. To be the man of space you need to understand the reality of the space and the whole process that you shall not see any churches, mosques or temples anywhere across the universe. As you understand the reality and by being in that position you see the bigger picture of the creation of the whole universe. As I said on this page we have drawn the whole creation of man for being on this planet. We change a little of the strength for a little material and you make the life vertical or horizontal and you change one of the parameters and you make it a dog or an apple tree. If you change it slightly to other parameters you make a cat or an orange tree.

K: the reality is that the fundamental understanding of the creation cannot be changed. Did the apple tree exist billions of years ago or due to the changes of the atmospheric positioning of the planet, the creation of the apple tree was allowed? This is what we need to understand: we need to understand the process in its totality so that in the deeper space that man is about to enter and partially some have, do not get fooled and taken as a slave. As I said I take man to space with the full knowledge that he enters the universal community as an equal partner and not a subordinate. (1.28.15 minutes). Understanding of this is fundamental that man does not become subordinate to others due to his own lack of understanding of his own creation.

K: the fundamental point is to understand what gives and what takes and what allows and how much and what creates a condition of an interaction and when you don't see it where is it, so it doesn't become 'magic.' When you don't see the return line then you wonder how this goes. But if you find

the return line and understand the process of the return line, there is no magic. The life of the universe is very simple; it is a loop, nothing else. And the loop you see very clearly. It means the existence of the both; one of the strength appears to be of the other. When you understand this then you understand why our work with the Chinese has a lot of meaning in yin and the yang. Each one has to be connected to the other to bring balance in the creation. There is no point of change. It is the exchange in the strength wherever it becomes balanced to be accepted by the others in the field of the attraction.

K: the full understanding of the science of plasma in its entirety is understood by 60% in the Chinese culture. And those who follow it, they see a lot of things, a lot of pathways and passage to other points. We gain what we receive; and we don't see that what we receive is what we have put out. We always are unbalanced in our judgment on every level and this way you can be abused. When you look and don't see the other hand putting the money in the pocket when you are playing magic, the money has 'disappeared.' But you didn't see the move because you weren't at the visual strength to see the hand put the money in the pocket. It is your job to find the pocket. When you understand the pocket is there, then you understand the full circle.

K: the creation of life in the universe is as simple as A, B, C. It is the man who sees the A and the C and doesn't see the B and just wonders how it happens. When man doesn't see the link it is open to abuse in space. Any Questions? Please keep them to the teaching.

R: there is a question in the Q and A from Azar: *are souls grown by older souls? Does our physicality come from our environment?*

K: the physicality comes from our environment.

R: I think you established that.

K: the extension of the soul is not...the establishment leads to the creation of the man. As you have seen the amino acid led to the interaction of the salt and the water. We call this condition "*life as we see it.*" Look at the way the red muscle tissue is created and the white muscle tissue is created. Why do birds have both white and dark meat? Look at why the creations on this planet, which are 4 legged have red blood cells and red meat. Look at why the fish carries the white meat. Understand these are all due to the interaction of environmental gravitational magnetic fields. In the liquid of the water different structures are created.

K: look at the structure of the body of the fish. You don't see muscles you see layering because the flexibility is there because the plasmatic field of the water created that. Look at the structure of the dog or the man. We have different needs because the atmosphere has changed the condition. So the next step is that we are not created each time out of nowhere. We don't fall out of what we call the basket of the stork. We are created out of the interaction of the cells that have created their own memory. So, in that level what has been stored in the memory bank of the energy of the cells of the father and the mother becomes the central bank to the new life.

K: There is an important thing to remember going beyond the matter of the physicality but understanding the totality. As human beings we have one illusion and one fallacy and that is that we only store what we feel or what we hear. Understand that the span of the aura of the man. The man who existed at the time of Christ at the other part of the world has received a message the same as the man who stood next to Christ. He chose not to hear because he could not see the man or the reaction. Many people who were at the level of the understanding of the teaching of the Christ, bless his name, lived a Christian life without ever knowing about Christianity because they received it through the fields of the planet and the fields of the existence of the soul of the Christ. So in the memory bank of their souls, of what he transferred to us, even if they were born in South America at the time, they still have the depth of the knowledge of the existence and they have heard the message.

K: so the soul of the entity of the man on this planet hears everything and gathers everything and it becomes part of the next generation. Then is it possible that we are reincarnated and we have done this and that? No it is not. We carry the combination of the knowledge of the past in our soul. The sperm and the egg are the hard disk. The soul is the information of the hard disk. It cannot be erased; it doesn't matter how the hard disk is chosen. If you go back and understand this, man by being at one point or another so the interaction of singularity as when you are, for example, pregnant, it is hard to hunt to feed the child for 9 months. 1.38.23 minutes (Keshe drops off..others hold discussion).

Azar: in the diagram with Cu and Zn where does the iodine come from? Where is it? We have the zinc and copper which is physicality and emotion, so where is the iodine?

Rick: where is the iodine? Perhaps it is part of the amino acid complex?

Azar: iodine is the cesium and the one that is the soul. Where does the soul come into place?

Rick: I thought Mr. Keshe was talking about the interaction of the red and the white muscle material in the body and the infinity loop interaction between the layers. Maybe that is part of the answer.

Azar: do we have a God? As humanity do we have one God?

Rick: does humanity speak in one voice? I don't think so. I don't hear humanity? Do you mean you?

Azar: I am talking about the concept of God and Mr. Keshe said Christ will bless his soul. If we have no creator why do we bless the soul?

Rick: anyone have an answer to that question? You pop all these big questions when Mr. Keshe isn't here and that puts me on the spot.

Azar: that's okay; it's just opening the conversation.

Armen: bless the soul, this is the teaching he brought for what he has done.

Azar: Armen, what do mean what the soul brought in? Who is the one who said *I created man in my own image*? Who is that one?

Armen: it's us; Christ said it.

Azar: Christ said that, or God said he created man in his own image?

Armen: actually we said that.

Azar: so we are "God" then?

Armen: correct.

Rick: we have to discern what we mean when we say "we." That is why I asked about saying "we." You are going to take what Armen said and say that it applies to all of mankind and everytime someone speaks they are speaking from a place of God. That may not be true.

Azar: the question then if we are all God, why is one God a killer and another God is a nice person?

Rick: we are all god, but we are all idiots and other bad names as well. It all depends on your perspective—are you seeing God or are you seeing idiots and people fumbling around life. You could see each person a 'God' and actually address them and have that reverence and that amount of purity and gratitude. Or we can take a different ordinary point of view and look at them as ordinary individuals and treat them the way people treat each others. Sometimes it's not very kind and sometimes it is overly kind compared to the way you might treat someone if you looked at them as the incarnation of the Absolute standing right in front of you. In fact your image in the mirror would be that as well. If you can't see it, you are not at the point of being able to see it (the Absolute). We see other things such as people's flaws and difficulties. It depends on the level we are looking from, our point of view

or perspective which varies greatly in humans. That is why I said that we can't say *do we see God as humans?* We may or we may not. Do you? If you don't then *why not*, we might ask. Then we will have a whole raft of excuses of why we may not be able to see the Absolute in others in the moment.

Azar: my question then why did Moses, Jesus, Mohammed and others all show up? Where did they come from? How did they get their information and added strength? So what do we call them?

Mario: many messengers came to humanity and they had to come again and again because we are so dumbed down, stupid and not listening so we don't learn from the first.

Azar: so we have a messenger and we haven't created them?

Armen: creation is taking place in every planet.

Azar: Armen, do we have to be thankful for whatever we have? If we are thankful who does the thankfulness go to, the Creator or ourselves?

Armen: to yourself.

Azar: I totally got confused this time with Mr. Keshe's talk.

Armen: why is that?

Azar: because I thought I 'got it' but now I don't think I get it.

Armen: if the planet created us, who is God?

Azar: the one who said *I created man in the image of myself; who is that?* (1.50.17 minutes).

Stanley: I think our biggest problem is that we are trying to see the structure in everything. It is just fields and interaction and the consequence of the interaction. Now we are trying to see the structure and define God and trying to see the planets and trying to discuss this from the perspective of the certain part of the structure that we see. But if you go to the beginning they are just fields and interactions and everything that happens afterwards is just consequence. It is our perception that has to have structure.

Azar: so Stanley, why is one soul on the planet as we see it, suffering and another one is not suffering? If they are fields we should all have equal use of the foods of the earth. But you see some people are poor and don't have anything to eat and others have so much.

Stanley: it's very easy; take the good water in the container and put some dust that colors one part. It will not go very long before it is equal. What is happening to us on this planet, you can simplify and see it. It is just that circumstance of the interaction. But now we are looking from our position

as humans that 'this' is good and 'that' is bad, some are suffering and some are good. But if you are looking from the perspective of creation itself it is just like dust trying to dissolve in the water. Now you see the clods in one part of the water and then in the other part of the water and it's all the same. One part is not 'bad' and another part 'good'; it's all the same.

Azar: if that is correct then why are we trying to bring peace to the earth or prevent hunger, or stop wars?

Rick: if you cut yourself you want to put a Band-Aid on it. If you have pain in your belly or toe you definitely want to take care of that. It is part of wanting to help. Go ahead Mario maybe you have some clarity there.

Mario: the answer to the question that you are asking is in the Bah'u'llah in the hidden words. *Your soul is the creator of your own emotion and your own physicality. If you look at that and read that, it is your own soul talking to you so you will find the answers there if you read it like that. You are the creator.* The answers to all those questions are there. I think the iodine thing and I am not sure, but when you add the lighter gases of the amino acids and you put them together you will get a light field strength of the soul, of the iodine. I think that is correct. So the physicality creates the soul and the soul creates the physicality and one feeds from the other in the infinity loop. I think that is the answer to that.

Rick: that ties in with what I said earlier and he mentioned it before, Mario, in relation to the mosquito. Even the mosquito has iodine in its structure— isn't that true.

Mario: yes, I think that is the strength of the soul. But I think everything has its own field strength and that is where the mosquito has the exact field strength iodine as the human. One creates the other and not in a linear way but sort of simultaneously.

Rick: Mr. Keshe showed us how it works tonight when he showed the amino acid as flat and then when it combines with the blood or the hemoglobin then the hemoglobin is round and the amino acid wraps around the round structure and it gives it a 3-dimensional structure.

K: may I come in to explain this; I fell out (of the call) and I don't know where. I have been listening. How much did you hear?

Rick: the questions came up after you left.

Armen: you were talking about the white meat and the dark meat of the bird.

K: let me answer part of what Rick explained that you were asking about. In the body of the man it is a vacuum condition. Look at the transparent balls

with the gans you made. You see that the stronger moves out and you have the middle and then the weaker in the center. If you understood that, the Zinc moves out. Then the copper, and then the iron. That is why in the structure difference the finer blood vessels are in the inner part of your body. The same is true of your neural system. The neural system works in reverse of the blood system. The neural system is the infinity loop of the blood system, the other side of it. That is why the veins and the neural system work parallel and next to each other. It is part of the feedback and taking it. The body of the man has 4. We always look at the blood vessels and the other that brings the blood back. The same system hides in the neural system and we have a feed in and a feed back.

K: in respect to what we said about the animals, it is the environmental condition that has dictated the color of the animal, the color of the blood and the color of the muscle. So, in so many ways, I explain so much (when I was cut off). When I looked I was disconnected and that means that the man is not ready to hear. I revealed a lot of information and maybe it was heard by your souls. In so many ways when the body of the man becomes part of the interaction of his physicality it remembers the part of the physicality in the memory disc of the physical part. If you look at the CD player you can separate the drum from the keyboard even though they play at the same time. The keyboard is the soul of the man. The guitar is the RNA; the drum is the physicality and all play at the same time on the same disc.

K: it doesn't matter if you stop playing the drum; the keyboard still plays and the CD doesn't stop. It doesn't matter if you stop the guitar, the keyboard still plays. The keyboard and mimic both the drum and the guitar. That is your soul and it carries the entirety of the keys, the information. There is a very big question in the world of creation. Why do we always rely on the mother? Because not much or many are produced (eggs) but it carries the totality of the information. The father is the addition to the keyboard with what was missing and needs to be added and what that part has heard. This goes back to the beliefs in the Jewish religion that the bloodlines go down the mother's side. In many African tribes it is the same. The mother produces one egg as perfectly as possible. The father produces many because it doesn't know if it is distorted or not. It depends on which part is alive (? 2.01.12 minutes).

K: the process of the understanding of the physicality is to be detached from it and to understand it is just a point of manifestation, point of presentation

in the physical dimension and not in the dimension of the totality. That is why when you travel in deep space your body structure will change. It has to change to exist in that environment. Do we need to have a belief that there is another God in that destination and that we can now join a new church? Or do we understand that in that environment we have to look like 'this' to be able to carry on the message of the keyboard. The creation of the creator is the biggest point for man's position to cross the line of understanding of the creation of the God, the interpretation and it is the same as the fallacy of the speed of light is also the speed. (2.02.36 minutes).

K: Those who have become wise have the understanding of the fallacy in the whole teaching of whatever writings of Einstein. He never understood and he gathered his own believers. So the others in the level of the soul understand. The important point in this junction for man is to understand the totality and this is our biggest problem. Those who would like to stick with the current ways because it fits them will deny everything else about it. The Jews deny the Christians, the Christians deny the Muslims and the Muslims deny the B'hai and the rest of the whole lot. Because in accepting the development it means letting the past go. It is why religions have no place in the universe. Because when you understand the totality and you are open to the reality of how life in different shapes or forms exists and they do not need different churches of belief.

K: the church is the temple of the understanding of the man himself. It is he who puts different names on it. The temple of the man is the soul of the man and it is for man to understand his soul. Then he will find out that there is no limitation in the world of creation. This is what is important to understand and then we get ready to go. There is no use taking man to space and then his having to find the Jews, the Christians or the Muslims in space. What other religion do you want to hide in whatever name that you create due to your own lack of understanding? I have always said that the man will take from this science according to his intelligence.

K: How intelligent has man become to understand there is the process and the creation. They say there are 'atheists.' No, they are ones who never understood. They say the man who uses that word shows his lack of understanding and a point from which he can confirm that he is stupid. Not the man who has given the knowledge. This condition and this word (atheist) show my lack of understanding and I don't want to understand more so you are stupid, atheist, or anti-Christ. It means that this is the level

of a man's maturity and he doesn't want to go any further and he is limited in his understanding. So it is not you who is wrong it is me (the atheist) who is the enemy of myself.

K: this is what we have to mature into. A lot of people will kick and shout because a lot of churches won't exist when man understands the totality. When the man understands that if he kicks the dog, he doesn't receive a bite from the soul of the dog but a kick and the man has to pay somewhere else to balance it (the kick). We look to justify our meager existence through our lack of understanding and then we believe in anything. You name it, we believe in the plant, the tree, the church, the mosque, the temple—call it anything you like.

K: They keep on telling me, especially the American scientists who are atheists, that you do not mix science with religion and theology. This is where we cannot accept and it means we want to stick with it and we are stupid because this way we can abuse the man. We are opening their eyes not to be abusers. This is the problem we will face with the religions. It is the same. When people understand what is on the table, then how can you tell them that Jesus is there, Moses is there, you pay me half of what you earn? It is he who is the thief in the name of God, not the man who works. This is the way we have come to believe and it is enshrined and ingrained in our ways. That is why we ask the question *Where is God? Why has he made himself in the image of me? He has made himself in the image of me, because it is me who has made that image.*

K: the color of red to my eye is not the same as the color of red to your eye. The job is to understand the totality that by understanding it we close the door of abuse and we don't go into another cycle in space of the black against the white, Muslims against the Christians, man from planet earth against man from planet Mars or another star. When you understand the man in the correct ethos path of Moses, Jesus, Mohammed is all the same man and same path, you carry that into space and the creature from another planet is part of you. It is the same as you just created in a different condition so it is black, white, Chinese, Martian or whatever else. This is what we are trying to establish and the message we are trying to convey.

K: those who oppose this kind of teaching of understanding the totality to open the man, these are the criminals of humanity because this is the way they want to carry on. In limiting the understanding of the man they can

continue to abuse it. I teach freely and the others teach freely, but it is what you understand from the teaching that counts. We started the process from the same matter but we showed the evolution and called it the nano and the gans and the rest of it. You have started with the matter: you heated it, you made it liquid, and made it solid. In every stage of every one of those you can still make the gans and the nano. It is for you understand but the process doesn't change.

K: what we have tried and what we do is very simple: man has to understand that there is no limitation in the universe. The barb wire, fences and walls are put up by man who wants to limit himself to his own understanding and his own intelligence. There is nothing wrong if you can see beyond the wall. As long as you accept there is a wall beyond that wall and it is you who have to understand the height of it. That wall was something else, and then something else, then you called it Judaism, Christianity and the rest. White, yellow, black and the rest, we create these divisions to confirm our own existence. If you put these away there is no problem. If you put these as our own lack of understanding, then there is no prejudice or limitation. Then we are open to the totality.

K: here is a very interesting point that I was explaining recently to a couple of people. I mentioned this before and maybe you understand more about how the man has fooled himself and entrapped himself. Sometime ago I was sitting with my cousin who is intellectual and lives in Iran. She said, *you know you men are so stupid. You have written all the laws for yourselves and they have nothing to do with us women.* I asked her what she meant. She said *read the books; all the Holy Books tell you the man cannot have more than one wife; that is adulterous. Or it says a man can have 4 or 5 wives, or this or that. But in none of the books written by man does it say that a woman cannot have 4 or 5 husbands. You put the limitations on yourselves and not us, so we are free. As women we are free; you made the holy books for yourselves and put in how many women a man can marry but nowhere does it say that a woman cannot marry 10 or 20 husbands.*

K: now convert this back to what we believe as men. How many of us have paid money to the church or the priest or whatever for having an adulterous life. But women have 2 or 3 husbands or lovers. There is nowhere in any book and what we say is that we punish the woman with this or that. But nowhere in the books has it said there is a limitation on many the woman can have. It is the man who is limited. So man's pride has made him the

prisoner of his own belief. Now you understand that you have to rewrite all the holy books so they cover the women too. Now we need the parallel prophet of women to convey the changes. Or, we understand the totality and we don't touch a soul and it doesn't matter what shape or color it carries.

K: now we have to understand the temple of the man has to be the soul of the man. Then you manifest yourself in any dimension according to what it is in a given environment. If you are in the environment of the gaseous you still have the amino acid. If you enter it, interact and you create a life you are the flat line gans amino acid. You interact with a new environment, new material, and you become the fish, the white and different structure. It can be flexible in the fluid. You change into the atmosphere of the solidity of the earth connected to its matter state because you carried it inside yourself in the solid state and you become the 4 legged man and the animal. Then you stand a bit upright and you call yourself intelligent because you can see a bit further because you walk on two legs.

K: but all this, let's take this man onto the surface of the planet Zeus. He will make himself 6 legs and 20 arms and 14 eyes because this is what is needed there. Is he any more intelligent? Does he need a new church that each eye has to pay attention to? And he makes 400 temples so each leg can walk into one. For man to understand the totality that this is what is needed to survive in that is that there are no churches, no temples and no God. So the God of the man becomes himself to be correct.

K: this is my job and that is to get the man to understand that the temple of creation sits within the soul of the man. The wealth, the status is what man has made. One suffers or one doesn't is according to what the physicality has accepted. I walk the streets of Accra and I walk and see people and I have never seen so much pleasure. People don't have the position that the man has made for himself. But they are happy because they understand the position of their physicality. In the rest we do everything possible and we are never happy because it is gone. The focal point has been that understanding of the truth is important.

K: it is very strange and I post these pictures one day on the internet. We drive every day across this beautiful city. When I tell you this, you Europeans will pull your hair out. You say Africans are wild people and they do this and that man has made you think that the man in Africa is not the true man. I tell you what—we walk, we drive and we see generators

(that cost) 10s of thousands of Euros outside on the pavement. In the west within 24 hours they are stolen and gone. Here is the freedom that I *trust the nation. I don't trust the 4 walls and I put my system outside.* We pass rows and rows of furniture on the side roads and never moved from there. There are thousands of the latest wheels and waterers on the pavement and they are never moved. There are thousands of people passing by day and night. We pass the most beautiful flowers that are all open and on the pavement. There are thousands of them and nobody locks them up because man carries the truth in his soul *not to steal.*

K: in Italy they don't touch things because the Mafia will kill them. Here they don't touch things because it is wrong to the soul of the man. The only people who steal are the foreigners because they got the habit of stealing from the West. Ghanaians don't touch anything. I have seen this in Gambia, in Sierra Leone, and in Kinshasa (Congo). People go hungry, but they do not steal. This is the true man. Then the white man in the west calls the West right because he has the gun at his back. We invited you to understand what the white man is missing and that is the trust in himself. And then he needs those kinds of guns and creations.

K: I will use the camera in the car and I'll take videos. You will see rows and rows of furniture, new beds made by the man through the effort of his life and he puts it on the pavement. He puts it on the sidewalk with the trust that he can go home and no one will steal it. In the west within minutes it would be gone. Who is right? Where have we made the difference in our understanding? Why do I feel at peace in Africa for decades? Why are you invited to come to Africa, to Gambia and to Ghana for your own health process? Because when you come here you walk in the same ethos. You work out of the hospitals and we work with the authorities. We don't work in the back in hotel rooms as they accuse us. This is how they cause disturbance and these are the messengers of the evilness of the man. Nobody steals and everything is within the law.

K: now, who is wrong or do we just the liars that the man who lives in the hut doesn't steal? They steal the crosses from the crosses of the churches in England to melt the copper and the gold. And they call themselves Christians. How many roofs of the churches have disappeared because of the copper that was stolen? Here they leave it on the streets and no man touches it. The only one who steals is the white man because he has never

seen anything (like this) and says it is time to take it as they would in Europe or America. And then we call them Africans. They are the true men.

K: They don't put a hand in their pocket and they don't go out and say this is my limitation and this is what I can have. Those who are greedy have been westernized and they do and they are from the president all the way down. If you understand this when you go to space nobody can bribe you because you can make everything that you need yourself. Nobody can tell you that they can change your cancer because you can do it yourself. If you understand the process nobody can touch you. Because you are made in the strength of yourself. *I made man in the image of myself.* If I am weak I made that image.

K: I am detached but I have to serve the life of the man. I am testing the group of the Keshe Foundation to see and understand their detachment. It is very interesting what is coming. Because then I know who is truly there to be at the next step. We have to understand our own strength and our strength with the true knowledge of the creation. And the way I explained this morning, now you have seen how simply you are created.

K: Is there a fossil fuel? Is there an oil crisis when the oceans create millions of tons of oil every day? As I have said many times, if you saw the oil on the top of your CO2 box then you understand how life is created that we become single cells and the rest of it. What happens to those who do not come to the condition to become part of it? They sink to the bottom and they become oil. And those who are thieves and the rest call out that there is a shortage of oil as a fossil fuel and there is going to shortages. How many times can we extract 85 million barrels a day in and day out? So this shows this planet is continually producing more and more. (2.25.25 minutes).

K: We found new oil reserves? Yes, because you emptied and converted the field of the planet so more amino acid is reaching what wasn't there to create the balance. The more we dig the more we create. It is the extraction that creates more and more. If you take amino acid from the top of your boxes you see that more is created. The more you take, the more that is created. So how can it be a fossil fuel used for constant energy for the man? The abuse of the man is through his lack of understanding up to now of how oil is created.

K: now you have seen in a simple way why you even have blood cells in your body and how they change according to the environment. The closer they are created the less and the thinner they become. So did God sit and create every branch of every vessel for the flow of the energy in the body of every creature in this universe and the universes beyond? Do you think there is such a process? Or has creation of the God been the path to abuse the man?

K: we change names in the time of the man; if you sacrifice a virgin the clouds will go there and or the volcanic eruptions or there will be no hurricane. If you wait for a time, it will stop and you don't need to sacrifice. We change the sacrifice by giving to the name of the temple or the places of worship with the money of the man. You give. And then we can abuse you and abuse your children and everything else with the pedophiles and the rest of it that we see now days.

K: I remember in the 1970s and the 1980s when I lived in Iran I got used to police without side arms. We were so comfortable we could talk to the police. There were days that the first time I saw a machine gone in the center of London in the mid-80s and 90s and I was shocked. I asked the officer why he was carrying the machine gun and he answered *you haven't heard about terrorism?* I asked him why not of the other policemen were carrying any side arms while he was carrying a machine gun. He answered that they were 'special forces.' They were there to create terror and horror that there was something wrong.

K: if you lived in England there were no side arms and the police exerted their authority by correct conduct. Then if someone abused another if you told the English police that a man was a cop (? Robber?) They would have cursed you and said that was an impossibility. Until they started catching the thieves of the police. But now it is accepted and criminality exists in the law enforcement. Now it is accepted that criminality exists in the clergy. It doesn't matter what faith because they rely on the weakness of the man and the police. If you do something wrong you pay them and then you are kept 'safe.'

K: We see this in the western world. What do the police do and what has become the norm? Anybody who is not within the framework of the policemen is a 'terrorist.' They can write a paper that says you are a terrorist when they don't get what they want from you. And then I stay in my

position. We see this in Gambia. The ex-president in Gambia was close friend and a 27 year old man walked in his office and said he would shoot the president unless he left the palace in three days. The 27 year old wanted to be the next president. The president left and said *you keep it; I've been president for 27 years.*

K: Now he is put in the point of re-election and doesn't accept because the 27 year old wants to carry on with the abuse. Because abusing has become the habit. We moved out of Gambia because of the unfairness. So it is we who are accepted and understand how you don't need to fight; you just change the condition for yourself. This is what we have to understand. All of the teachings we have done for the last several years have been to prepare man to see the whole process with the gains and more that he gains confidence that he cannot be abused because he understands the totality and that there is no 'magic.'

K: As long as you don't see where I put the coin, it is magic. When you can see the coin being put in the pocket there is no magic because you understood what you have seen. All of my teaching for the past few years has been to open the eyes of the man to the reality of creation of himself, the environment and the universe so that man cannot be abused due to lack of understanding. I explained this before in the conference in Ghana. I saw resistance in the first hours from all the nuclear physicists that there is something fishy and we cannot understand. We are the nuclear scientists of this country and we don't understand.

K: I saw the problem and I expanded their horizons and I took the shackles of limitation to the next step. I said *we used to be the men of the matter of science for centuries and thousands of years. In the 20th century we became "atomic" because now we understood the whole thing has a chain in it. In the mid to late forties and fifties we became "nuclear" because we understood a little bit more. And then does the knowledge of the man stop or did it go forward? Now we have become "plasmatic." So all you scientists are matter, atomic, nuclear, and plasmatic scientists.*

K: now they were comfortable because now their horizons of understanding were opened up and they could go beyond their limits. There wasn't a fight with them; it wasn't worth it and they had to accept or understand that there was more they needed to know and this is how we got collaboration. We changed the temple and church of nuclear to plasma and the plasma has no

'church' because it is the essence of creation. If you have accepted that there is a God, there is nothing wrong with it. You brought the limitation of God to your own existence because this is the framework you could work with. Then you made a limitation for that God too. There used to be statutes and fire and now you made it a cross or something else and you are happy with it. This is your limitation so that you understand everything else in respect to what that limitation put on you by yourself.

K: it is very much African life. The Christians go to church and then they go to their own ancient leaf god too. They have two Gods. They pay to the church because this is the modern way. But they still go and see the priests of the local leaf. A man of two gods lives in Africa according to what he has been taught by the white man and by the local man. And now there is more and more competition of which temple they will get more: Catholics against Protestants, Jews against Muslims, Muslims against Christians. We have southern Sudan and northern Sudan. We have the Christians against the Muslims. This way with lack of understanding we can take what we like.

K: this is my job and that is to open your eyes. The temple of creation is within the soul of the man. Now you call yourself and bring the limitation to it or try to adjust it right. Go back to what I just said *it is you men who make limitation for yourselves. You say you can have 4 wives because nobody has said we must put a limitation on it. We men are so happy and the women are free.* Where is our woman prophet to give the limitation to the women? Just because we put the word adulteress into it covers everything about the woman but not the man, but it already applies to the man as well so what happened to the other part of the woman that they can have so many husbands?

K: We men have been fooled by our own foolishness and that has to stop and there must be understanding of the totality. In space there is no room for this (foolishness) and it will end with the demise of the stupid. The stupidity comes out of the limitations we have put on ourselves. Then if you understand this stand back and you will see the rest of the universal community standing next to you. They have always been there. You have been blind to it. They have never been farther than the breath of your air for your life. It is you who are so short-sighted that you don't see the tip of your nose. Because they are just touching your nose and you have never seen it. Denial has been the best way of survival for men who do not understand the totality.

K: Many people are celebrating Christmas. But, is the truth about the Christ what the man has led or been led to believe? Or is the symbol of openness of the eyes to the totality where man has decided to stick to the words and not the essence? *Thy shalt not steal*. The biggest thief of the man is himself from the soul of himself so there is no balance between the soul and the body so man suffers until the fields balance. Africa is in balance even though it is learning more and more about the way the white man lives and the African thinks it is correct. And that path is led by the leaders of the religions who have set up different churches with different names.

K: So where is your temple in space? You are going to build a church, mosque or synagogue on Mars or a temple? Are you looking for the return of the Christ? Or do you understand that the name of the Christ is the balance of the soul of the man itself? Christ is within everyman...it is his teaching and not his physicality and it's the man who has to understand this. This Christmas is really what is a big mess for man to understand. Any questions? (2.39.21 minutes)

Azar: Good morning Mr. Keshe...did you hear...

K: Good morning, Azar. You have a huge problem between you and your soul and you are trying to fish out how you can save yourself. And in different ways you put different questions every the time.

Azar: so is all directed the same origin, yes?

K: I don't know; you have to decide. I am not a priest.

Azar: so my question is how can man understand his own soul?

K: I leave that for you to sort out; I have taught enough about it. You have been searching to find the soul to justify the existence. But it actually exists and it is you who has to understand the strength of your soul. It is the limitation we put and the way we understand the putting of the limitation is for us to decide how to feel safe within it.

Azar: in the beginning you were talking about the gravitational and magnetic. I have a question about that. Every single cell in the human body has magnetic and gravitational in balance. So the totality of the human being is made of many, many cells. If I give each human body that is made up of say many, many cells, so if I give each human body a hundred magnetical and a hundred gravitational.....

K: it will not exist because it sits in balance; it doesn't go anywhere. There always has to be 98 to 102. That creates the life cycle. Stagnation does not do anything.

Azar: so imagine that 98 is magnetical?

K: yes.

Azar: okay so 98 is magnetical and 102 is gravitational. When my magnetical becomes 95 that frees the magnetical to go to gravitational and it goes to 105.

K: Not necessarily; it depends on what you are interacting with and how much of it do you collect?

Azar: I am trying to figure out how these diseases come into play with this exchange of magnetical and gravitational.

K: it is very simple; try to understand that there are other fields that interact at the same time that you give and take from and to. (2.42.17 minutes) It is not singularity of one or the other; it is polarity of many.

Azar: if the human put their fingers together at the end of each day can they balance their magnetical and gravitational?

K: yes and then you don't exist in respect to the environment because you have self-positioned yourself and that is it.

Azar: thank you.

K: every Christmas I raise the level slightly higher for the man to see a little more because we have reached the ultimate point. The doors of understanding allow the doors of ignorance to open up and it's the way we see colors and we separate each other by color and shape. Now if you open your eyes and understand this we will see the creatures of the universe. You don't need to fly; you need to open to fly so you can see through it. We have zipped ourselves in.

K: there is an old beer advertisement about a beer in the UK. It says *such and such beer reaches the part that no other beer can reach*. Now I have touched and reached the part of your soul that only you can reach to understand and then you are free. The interaction of the physicality with the soul of the man will create a dimension and openness that will see the universe. Man does not need to travel the depth of the universe as he is part of it; he is within it. And this is very hard for the man to understand it. The reason for that is coming to understand how ignorant I have been of the reality through my own ignorance. So, we educate everyone the same so that no one can abuse the same on this planet and beyond and not to be abused by the others.

K: if there is no question we will close for today.

Ruthie: may I ask a question. Could you explain when and how our souls go into our bodies?

K: it doesn't go to your body; your physicality led to the creation of your soul and then because of its strength it controls your existence and feeds it. If you look, Rick explained something in the talk and I was sitting in the background. Nobody could hear me but I was listening to what was discussed. The field center in the middle of the cores is empty but it is the actual center of the strength. In reduction or in interaction with the water in the ball and then the others, this allows according to its strength for it to exist. Understand the process and this is where the problem is.

K: when you put something in a centrifuge does the heaviest goes to the outside or, does it go inside? Did we see the same behavior of the centrifuge in the vacuum condition? If you leave gas in a room, the lightest goes to the outside. When we put gas in a vacuum, the lightest goes to the middle. Why does it do that? It means that it has more to give than receiving more. Why do the heavier gases go to the boundary? If you understand the gravitational magnetical positioning then you understand how the gases and the light gases and the others position themselves.

K: So, it is the same in the body of the man. So it is the same in the soul of the man. Why does it need to be the Zn or Cu and ZnO or Ca to be part of the brain of the man in the emotional part near the center, the soul or the center of the energy? Why does it, as it goes further, need the Zn and Cu, the heavier? If you look at the structure of the body of the man it is exactly the same. But it is ring (?) pointed. This is what I have taught many times. Can you allow me to share the screen please? (2.48.32 minutes).

K: this is the soul of the man and this is your brain (the soul sits in the center of the brain). This is your physicality. Why do you see your physicality in respect to the earth? (2.49.16 minutes) Why don't you see your physicality this way (from above the head)? Why don't we walk on our heads? It is the same as a raindrop. The pull of gravity in respect to the earth gives the physicality of the man. The fingers, the toes show which kind of strength you want to take. Have you ever thought that you have 5 different fingers? Have you ever heard when I teach that a leaf has so many dips and its body connects to the fields so it can absorb? So does the man.

K: if you take the earth away from the man and you position him in a condition and you create new gravitational magnetic fields then the man has

to react into that environment and maybe he will have fingers like this (2.50.28 minutes). So, the essence is the soul which interacts with the earth and the field balance dictates the shape. That is why all the animals have the same shape. The head goes in the front and the legs go in the back because it has to create field balance. There is more energy in the tail of the fish than in the head of the fish. So creating the balance dictates the size of the fish. So it is the same with the cat and the dog. But here you have the connection with the planet so you have to give them the legs. Here you have connection with the water which is dynamic and you become elongated (the fish).

K: So we change according to our own environment on this planet; we change color and shape and have black, white and yellow and short and tall. But we don't want to accept this is the reality of the existence in reaction to the soul of the man with its environment. The manifestation is the blue-eyed, brown-eyed or whatever you call it. If we see the amino acid becomes the fish or the man in the same atmosphere, so it is in the atmosphere of the solar system, the universe, the galaxy and the unicos. Then the most important thing is what I have always said this to the priests, but this is the first time I put it to the public. Where is the church of the dog? Which temple does the dog pray to? Or is the dog wiser than the man; he knows who feeds him according to his understanding of the feet of the man that allows the dog not to do too much and to be comfortable.

K: So the dog is more clever than the man and has no temple. We have never seen dogs and cats go to church and pray. They don't even allow them into the churches because they are too clever. Have you seen a church or a temple in the sea for the children of the fishes? Man due to his own lack of trust in himself has been bound to bricks and mortar. We don't preach religion. We preach understanding of the reality of creation and physical creation, not the imaginary. It is you who made the ganses. You tried to make the gans and you put the gans environment the same as the earth. You put a ball in the gans and none of you have done this before, and then you see the shapes of the creatures you will see in the water. I have done this. You do it! Have a look at it. It is fantastic!

K: you see animals created from the fields that have many combinations of arms and legs that they overlap. I replicated the putting of the core dynamic in the gans water and then I replicated the Zn and the others and the gases on top of them. Then you see the beginning of the creation of being. Have I become the creator or have I understood the process of creation? I am of the

second and you are of the first and that is why you need a church and a temple.

K: I always respect the prophets of the past because through their teachings I can reach you souls to elevate your souls. This is the limitation you understood. I cannot teach you medicine when you haven't learned even how the plant works. What is the amp of the process of creation? So I speak your language. I am the creator many times; I am the light and so are you. It is you who is so weak in the trust in yourself that you call these guys the messenger and they are Creator or whatever. Because you haven't built the trust in yourselves.

K: this is what I tell Ghanaians many time. They have taken the trust that you can do out of you, that you don't even believe in yourself even when you do this in front of them. I carry some of the twenty most intelligent people in this country who are nuclear physicists who work in the Keshe Foundation factory. My heart bleeds for them at how much intelligence has no strength of trust in themselves. They are building and developing. It has taken me a month to build these guys and girls up. Gradually they understand they are something and they don't need the white man to do this. They carried their understanding.

K: Many times I said that I gave a lecture at the nuclear center by invitation of the South Korean Nuclear Center at the invitation of the South Koreans when I was there. I entered a room with the top South Korean nuclear scientists—many of them around twenty. There was me, the translator, the twenty of them and the head of the nuclear center, very proud that they were there when I was giving a talk. They all walked in like sheep with big folders under their arms. I didn't know why they were carrying these 400 to 500 page documents.

K: When I finished the lecture and I explained to them the creation of plasma in their order of understanding one of the top scientists said, *excuse me, Mr. Keshe, we were expecting such technology to come from Americans in 30 to 40 years' time. But it is here now; how can we accept this?* I said, *sir, you are your own prisoner that you have to wait for an American to give you the knowledge and to accept that you have the intelligence to understand it. It is you who have put the limits that someone is higher than you even though you understand. You were waiting for someone else to tell you.*

K: I walked over to him and opened his package and it was printed with every page carrying the Keshe Foundation information across the top of it so they could read something before they came in. So it was the blind leading the blind with a guidebook under their arm. I sent a message back to the President of South Korea: *send me real scientists who have trust in themselves.*

K: His Eminence said something very nice. In one of his speeches several years ago when I was in Tehran he said the Iranian scientists have to become the writers of the books others copy and not for the Iranian scientists to be the photo copying machines for the others outside. When you understand it you don't need to copy. When you have no understanding you need to copy to just carry it to confirm that you hope you understand.

K: believe and trust in your own strength and understanding. You see things slightly differently than the others in the whole span of the new technology and the new knowledge. It is not the new knowledge. It is you who ignored it. Look at the gans; it is you. Today I explained how blood cells are made and how you have blood and skin and the rest because it creates that central position. The weaker point in the nano part leads to the creation of the stronger pole in the feedback to become the eddy current that is your darker blood to your heart. Now you understand the knowledge. In understanding I give you strength and in strength I stop the abuse of man in space. (3.00.25 minutes). This is the whole purpose of these teachings.

K: We have an open Keshe Foundation temple where you can go put money and sit and pray. We open the Keshe Foundation temple in the soul of your body so that when you understand it can elevate you. Have you seen any Keshe Foundation centers? In teaching yes and in factories, yes you have. If I opened the Keshe Foundation churches we would make billions and then we would carry on with the abuse. And I cannot bring more abuse. Share the knowledge freely and you will receive more. Put the limitation on the sharing and you have put limitations on your own intelligence.

K: the scientists and the healing scientists in Ghana have understood the potential of what this business of technology brings. Next year we will build the first space center in Ghana as well as the first space hospital. Next year we build and we have already found a manufacturing site. The teaching at the university level has already started because they understand the new is

the opening of the life of the totality for the nation. We sit and we watch. We sit and we pray that others don't abuse one another. I have put the Keshe Foundation top team management in very specific points and they all know what is happening. I have a purpose for it.

K: Because it shows an understanding of what they understood and then they will see the change. Until they do we can only do a little bit because they should have matured. They should have understood their positions. It is the same with the rest. A lot of you have fear from the attacks of others and whatever. Because then you were tested. Failure is yours in understanding of yourself, not ours. Intimidation of the others is exactly what is happening in the wars of the Middle East. Intimidation and war and then you are sucked into what they want.

K: Keshe Foundation as a scientific group has been made into terrorists by the police in Belgium. Because one man needs children. So now the governments see it and they block it. They are not blind. It is the same as you and the way you see others abuse others. You sit and you say *look the Muslims have 4 wives; do you know what they do?* But that is the beauty of it; let them have 4 wives. At least they don't abuse the children.

K: But in the church they do it. How come most of the child abuse is concentrated in the catholic section of the churches? It is because a man has been forbidden from his natural way of living in not having a partner. Emotion and reproduction does not stop. The man has been given a soul and he is in pain. He wants to cuddle and he wants to give. He is a priest and that is how he gives comfort from his soul. Look at the church of the others—the priest is allowed to have a wife and a child and they don't abuse the children. Garbled....

K: Everything is correct in the other religions and the dam can flow. When there is a big hole in the dam how much can you patch it? We call it an abuse in the western world. In the Islamic world the 9 year old girl can marry and become a woman. It has been done for centuries and there was no law of 18 (to marry) until very recently. They still carry it out according to the book. A man can marry and have a wife at the age of 9. In the west we have made it a criminal offense. Which is correct? A child of 9 does not understand the right from wrong. But, you have to understand why Mohammed, bless his name, brought that out. In his time they buried the girl in the sand as she came out of the womb of the mother because she was

a burden. He allowed the co-existence. You have to understand the environment in which Mohammed appeared, bless his name.

K: Now in the west we have a bigger problem in the Catholic Church. But it is all in the name of the Creator that you created. You have to decide that a child is not to be touched. Do you need to put a name on it and find different ways of it to survive it, to keep it alive or abuse it? Many times I have said even the people at the age of 25 are as innocent as the 9 year old and should not be touched. That is not the process; it has to go according to intelligence. 18 is the right time for the majority of us to at least understand the borders of and the change of the pattern of the body to mature of the boy to a man and a girl to a woman.

K: Man has made the name of religion to carry on his abuses. If you are correct and you understand your soul he cannot abuse and he cannot be abused. We see many of these examples in different paths of belief. We were talking very recently to people from Ghana. In the very recent past what is called a king has died. They had many kings. And the tradition is that the tradition of the king has to have 4 heads standing on each corner. So they would go out and kill children to stand under it. The radio stations and the police would announce for no one to go out because this was a possibility. But why does it have to be a possibility that so much has to happen so that somebody can touch the earth? Put a concrete block (on the corners).

K: You see the abuses sit in every culture because it is the way man tries to confirm his own existence by allowing himself to go to different levels. This is why I am trying to teach and open your eyes. Now you understand the process of creation of your own body, would you like to work with the gravitational magnetic field of the sun or the earth? Or does it in reality exist if this is your body here and you are seeing it with your soul and you have created the gravitational field of the four legs and arms in respect to the earth and the sun is here, then what kind of feature do you have in respect to the sun? Because if this gravitational field (3.09.48 minutes) has managed to create two arms and two legs, does it mean that you soul expands the universe and then you have many dimensions according to the field of interaction?

K: the field of interaction created the fish to be flat. The field of interaction of the earth with the interaction of the magnetic gravitational field of the

center gave man two arms and two legs and vertical ones that use the different material so that nitrogen, calcium or zinc go out vertically? So, is the physicality of the man in respect to the universe plasmatic and do we have parallel features in respect to the moon? Do we look very thin now on the moon because it still has a pull? If we manage to create two legs and two arms in respect to the earth, we must have structure or we would _____ away.

K: you came to the Keshe Foundation to find solutions and now you understand the solution sits in the soul of you. It is you who has to unravel the mysteries and understand your weaknesses and the rest. So how do you look on the moon? You cannot find the image of you.

Azar: Mr. Keshe I have a question.

K: you always have a question, Azar.

Azar: this is the last one; if you have two children and they are 5 years old. One is sitting in an apartment in New York City and the parents are feeding him (or her) and he is in comfort an everything is fine. And, there is another 5 year old sitting in a house in Syria and a bomb is coming and he is crying. How is my soul supposed to react to this?

K: this is what the conditions are that have been made by the man. You cannot react because you have to rejoice they both exist. Is there a position for that soul in Syria to learn about hardship so in the future he becomes just? Or is the future for the one in New York who lives in comfort and becomes arrogant and says this is my right? Or can you bring the two together so they can bring peace to both sides?

K: we see this many times. I have seen both sides. You and I both went through a revolution and we both felt pain. But has it made us become wiser and be more understanding or pragmatic and we become more narrow minded to defend one side or another. I have seen the abuse; I was in Tehran 8 years ago and the security around me was very tight. I was not supposed to see a lot of things. One day I was walking on the streets in the north of Tehran. I knew the security forces were all over. As you know in Tehran girls who are not covering themselves are pulled into the police stations and everything else. They have a law that they get the women who are not properly covered.

K: I was just walking across out of a shop and they were dragging this girl into a car. She was shouting and hollering and that is how it got my

attention. Then the security forces realized that I am seeing this and I am not supposed to see this. I saw and we know how they are. They approached the guys who were pulling the woman into the bus and said for them to stop because there was something wrong and there was somebody there who was not supposed to see that. And I saw another girl go and start to run and the bus pulled away.

K: Where is the reality of enforcing cover on the body of the woman or a cover on the soul or the intellect of someone? It's all the same. It's the same enforcement and we allow that enforcement. It is us who have to bring the balance. We cannot stop this process. We cannot stop the process. I explained last week how the health program contract is written by the _____. And how come now we see the opposite? Because the paymaster has changed. Or they have the same paymaster and they had the control but now they don't. Do we give from our souls to the world leaders to change the condition? Or, do we deliver the knowledge and change the expectation of the man to understand that they are all equal but life is very tough. Because we made it tough. Because we put value on everything.

K: I was sitting with some of the governmental leaders very recently of the nation. As you know when the disaster hit Italy we opened the Keshe Foundation as it belongs to the nation and we have seen the response. I said the same thing to these people who are leaders and influential in the government structure. I said *the Keshe Foundation operations belong to your government. Open it up. I share this and it's yours. Whatever comes in let it become part of the national assets. I am detached from possessions and I live a good life. I lead a life that is enough to support me for what I put in. But I don't go and live in God knows what palaces and hide behind things. We set this up to be able to operate with the present understanding of man. But, we don't do more. I cannot run an operation from a garage when we are dealing with scientists. We deal and set up the apparatus from the structure of the Nuclear Atomic of the government because this allows others to understand that change has come. Then they create intention. There is a saying in Farsi that many people sit on their brain because their brain sits on their eyes.*

K: many don't want to stand out, but they can become part of it. Show the people that what they do needs more and can be added to. Be proud that you are adding to it and don't be ashamed. There should have been no Syria if there was no Queen of England. We all know that. The plan was to empty

the Central Bank (of Syria). They fooled the Russians and the Chinese, in Libya. This time they said they would not be fooled in Syria. The change will be in favor of the Russians because Putin is correct. We will see this more and more. We don't take part in politics or anything else but we see the reality and truth. So does a child in Syria need something because of the hand of the others who want to rob? Or is it a pleasure to sit with the robbers in New York and have a good life. Which one will come out best in time?

K: we cannot fight anymore. The fight has become their habit. We can bring wisdom to those who understand that they don't fight. There is no need for fighting. We see that with some world leaders like the Russians, Chinese, Iranians and others. There is no need to judge. The two systems have to be in the same house with the parents wherever they are in Syria. It is us who allows the abuse and we have accepted it because they enforce it. Wisdom needs adjustment to intelligence and that brings justice. When you are intelligent it means you understanding everything and you understand what is wrong and what is right unless you are an abuser.

Rick: do you think the world is improving?

K: we are going the right way. If you take the Americans and the Europeans out of the equation, the rest of the world is very peaceful. The bombs are made by the western world and the Christians. They blame the others for using them because they pay some of them to do it. If you see and understand the history of man in Africa and Asia, you see the same pattern. It is the same people. When the English came to Africa they didn't attack and destroy. They attack a region of Africans and then captured them and sold them as slaves. They have done the same thing in Libya and Syria. They paid a bunch of Italians to go to Libya and start shooting. They were asked why they were shooting because they were Italians. Then you saw the shooting that started the revolution. Nothing has changed; the stupidity of man allows the same thing.

K: Not a single Libyan shot anyone; it was Italians who did it. The same process was done in Africa 200 years ago. Now you shoot back because you are defending. And then they control the purse and the newspapers. How many Chinese and Indians listen to CNBC? Very few. The whole thing is customized propaganda and they have control of things they call airways. We can reach the soul of the man without the airways and we are doing that because we have changed the communication channels.

K: Why do all the problems sit with Muslims? It started more than 40 or 50 years ago when they started Israel, the 52nd state of United States. And in the middle they stir things up and continuously sell arms and deal in life and money. There should never have been a state of Israel and we are calling an end to it that the state of Israel will not exist, but will become part of One Nation. We don't see an end of this and there will be amalgamation and the totality as one. Because then a brother cannot kill another brother in the name of a different belief.

K: This is why we established the Universal Council and the universal community under one leadership. It is to put an end to a brother killing a brother. In one nation there is no need for arms. Guidance and protection of the civilian police force is needed. There is no need for the army. The police forces do not need tanks, riot gear and missiles. The money spent on these things for investing in destroying the world and many lives in the Middle East will be paid back by the western world. I will take my decision and it is being made. We will take and we shall see. The Europeans will have the cup of begging across the world to survive very soon. It is the same for the Americans. The doors are shut and you sold yourselves out. The conditions are very simple: destroy all the weapons technology and destroy all the gun manufacturing and all the weapon technology. Then we allow you back to the humanity.

K: I gave time until today for the world peace to be completed and you ignored it. I will serve it and you will not like it. I gave humanity until yesterday and today (December 21st and 22nd) to complete the world peace. You saw that we gave the key to the governments and they abused it and they locked it up. We came out and gave it to the public. From now on we will do our job as One Nation and we will deliver. There shall be peace because the soul of the man is crying for it and we have educated the man. And then the story will be changed. The girls in Syria will laugh and the girls in America wishes they had never arrived at such a position (? Garbled).

K: every American will pay for what their nation has done. They paid their taxes in and they could have opposed it. They have killed 20 million people over 50 years by the American financing and you paid the taxes. The same is true in Europe. It is payback time. It is the time for correction and balance and no harm. No harm and no one will suffer but they will do it their own

way. There are no houses left to live in Syria. There will be no food to feed in Europe because the arms are not sold and cannot be manufactured. In making guns to kill now man has to sweep the floors and eat grass. It is very simple.

K: We teach the rest and the blind will stay in their own temple until they find out they have to eat each other. This is very simple. When we decide, we deliver. I waited for 2 years for government to deliver the technology we gave them. What happened to it? They rushed to take it and then they didn't understand it. So we started teaching and now you understand more. Now you are taking the Magrav systems and rushed to build them. Did anyone put anything back into the foundation? No. The foundation is humanity. I have more and I spend more. We get reports from Germany from those who used 18KW hours and before it was 4 KW. What happened to the savings? Did you put anything back into the community or back into teaching? You didn't share and now you lose your share.

K: I tested you and you failed. You did this by yourself with your own ignorance and we didn't do anything. The process has to be understood. That is what I said. The church is in the temple of your soul. How many of you are making so much money around KF. We watch everything. Have you come to us? Did you have to do it? No. You will lose. You make things, shirts, this and that and then you ask for this and that from the foundation. How many of you put anything back in? I told you to use more and let you learn how you abuse yourself. By giving you freedom I allow for you to suffer more because of your own greed. So, the temple of man has been the soul of the man. Let's see how many of you have a soul left to have a temple in it. And you go back for your fill and you still carry on with the same and you don't learn.

K: we are not preaching. We are teaching for you to understand yourself. We are teaching you the path of your creation and how you created and how you set the position of the physicality for the interaction of the fields and then the rest is you and how you decide to move in it. This Christmas is for those who believe in the path of Christ but I have one question for those who believe in that path. Was the Christ there for the Christians to kill some more for two thousand years in his name? As _____ said, the EU is a catholic club and you won't let Turkey in. Now the EU is paying for the catholic club wherever Turkey plays the game. Those who are wise understand what I am talking about.

K: Or should there be that the whole world is one club and we work together in the ethos of the KF. Let us see what happens. From today the peace is in our hands and the leaders of the world have lost their time. Now we decide how we serve and exactly how it should be done for humanity all across the planet. Thank you very much for today and have a wonderful Christmas and New Year.

Rick: thank you Mr. Keshe and have a wonderful Christmas. We will have one last Knowledge Seekers' Workshop on the 29th before the end of the year. Merry Christmas to all and we will be back again before the New Year. Thank you everybody; this is the end of the 151st Knowledge Seekers' Workshop for Thursday December 22, 2016. Thank you for attending.
